The news is everywhere. We can't stop constantly checking it on our computer screens, but what is this doing to our minds? We are never really taught how to make sense of the torrent of news we face every day, writes Alain de Botton (author of the best-selling *The Architecture of Happiness*), but this has a huge impact on our sense of what matters and of how we should lead our lives. In his dazzling new book, de Botton takes twenty-five archetypal news stories—including an airplane crash, a murder, a celebrity interview and a political scandal—and submits them to unusually intense analysis with a view to helping us navigate our news-soaked age. He raises such questions as Why are disaster stories often so uplifting? What makes the love lives of celebrities so interesting? Why do we enjoy watching politicians being brought down? Why are upheavals in far-off lands often so boring? In *The News: A User's Manual*, de Botton has written the ultimate guide for our

frenzied era, certain to bring calm, understanding and a measure of sanity to our daily (perhaps even hourly) interactions with the news machine. (With black-and-white illustrations throughout.)

Personal Learning Environments (PLE) is an approach in Technology-Enhanced Learning (TEL) based on the principles of learner autonomy, ownership and empowerment. PLEs are integrated, individual environments for learning which include specific technologies, methods, tools, contents, communities and services constituting complex learning infrastructures, enhancing new educational practices and at the same time emerging from these new practices. This represents a shift away from the traditional model of technology-enhanced learning based on knowledge transfer towards a model based on knowledge construction and sharing.

Manual de informatica forense III Blake Pierce

The first in the Media-Life-Universe trilogy, this volume explores a transdisciplinary notion of media and technology, exploring media as technology, with special attention to its material, historical and ecological ramifications. The authors reconceptualize media from environmental, ecological and systems approaches, drawing not only on media and communication studies, but also philosophy, sociology, political science, biology, art, computer science, information studies and other disciplines. Featuring a group of internationally known scholars, this collection explores evolving definitions of media and how media technologies are transforming theory and practice. As the current media includes a wider and wider range of concepts, products, services and institutions, the definition of media continues to be in a state of flux. What are media today? How is media studies evolving? How have technologies transformed communication and media theory, and informed praxis? What are some of the futures of media? The collection challenges traditional notions of media, as well as concepts such as freedom of expression, audience empowerment and participatory media, and explores emergent media including transmedia, virtual reality, online games, metatechnology, remediation and makerspaces. The book's primary readership will be academics, scholars and students in media and communication studies, including a wide range of undergraduate and graduate courses in media studies, communication studies and new media. Suitable for classroom use in the areas of philosophy of communication and media, media theory, media ecology, cultural studies, media archaeology, feminist studies and political economy of communications and media.
