iPhone Universo dos Livros Editora Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students

do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works

best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

At Last! A Beginner's Guide to Newborn Baby Technology You've programmed your DVR, you 've installed a wireless Internet connection, you can even check Facebook on your cell phone. But none of this experience will prepare you for the world's biggest technological marvel: a newborn baby. Through step-by-step instructions and helpful schematic diagrams, The Baby Owner's Manual explores hundreds of frequently asked questions: What's the best way to swaddle a baby? How can I make my newborn sleep through the night? When should I bring the baby to a doctor for servicing? Whatever your concerns, you'll find the answers here—courtesy of celebrated pediatrician Dr.

Louis Borgenicht and his son, Joe Borgenicht. Together, they provide plenty of useful advice for anyone who wants to learn the basics of childcare.

This publication includes the Proceedings of the PLE Conference 2013. The Conference on Personal Learning Environments is now an established annual international, scientific event and a reference point for the current state of the art in research and development in Personal Learning Environments (PLE). The PLE Conference creates a space for researchers and practitioners to share concepts, case studies and research related to the design, development and implementation of Personal Learning Environments in diverse educational contexts including formal and informal education. The 4th PLE Conference in 2013 took place at Beuth University of Applied Sciences in Berlin, Germany together with a parallel event at

Monash University in Melbourne, Australia. The PLE Conference 2013 received 75 submissions and welcomed almost 100 delegates from Europe, Asia, Australasia, North and South America and Africa. The papers included in the Proceedings provide rich and valuable theoretical and empirical insights into Personal Learning Environments. Personal Learning Environments (PLE) is an approach in Technology-Enhanced Learning (TEL) based on the principles of learner autonomy, ownership and empowerment. PLEs are integrated, individual environments for learning which include specific technologies, methods, tools, contents, communities and services constituting complex learning infrastructures, enhancing new educational practices and at the same time emerging from these new practices. This represents a shift away from the traditional model of technology-enhanced learning based on knowledge transfer towards a model based on knowledge construction and sharing.

The crucial role of feedback in the learning process is undisputed. But how can feedback be exchanged in the digital age? This book equips teachers and learners with a research-based overview of digital feedback methods. This includes, for instance, feedback in text editors, cloud documents, chats, forums, wikis, surveys, mails as well as multimodal feedback in video conferences and recorded audio, video and screencast feedback. The book discusses the advantages and limitations of each digital feedback method and offers suggestions for their practical application in the classroom. They can be utilized in online teaching as

well as to enrich on-site teaching. The book also provides ideas for combining different feedback methods synergistically and closes with recommendations for developing dynamic digital feedback literacies among teachers and students.

GUIDE O'Reilly Germany

The first in the Media-Life-Universe trilogy, this volume explores a transdisciplinary notion of media and technology, exploring media as technology, with special attention to its material, historical and ecological ramifications. The authors reconceptualize media from environmental, ecological and systems approaches, drawing not only on media and communication studies, but also philosophy, sociology, political science, biology, art, computer science, information studies and other disciplines. Featuring a group of internationally known scholars, this collection explores evolving definitions of media and how media technologies are transforming theory and practice. As the current media includes a wider and wider range of concepts, products, services and institutions, the definition of media continues to be in a state of flux. What are media today? How is media studies evolving? How have technologies transformed communication and media theory, and informed

praxis? What are some of the futures of media? The collection challenges traditional notions of media, as well as concepts such as freedom of expression, audience empowerment and participatory media, and explores emergent media including transmedia, virtual reality, online games, metatechnology, remediation and makerspaces. The book's primary readership will be academics, scholars and students in media and communication studies, including a wide range of undergraduate and graduate courses in media studies, communication studies and new media. Suitable for classroom use in the areas of philosophy of communication and media, media theory, media ecology, cultural studies, media archaeology, feminist studies and political economy of communications and media.
