The project tests the applicability of using Internet-based travel survey tools to collect information regarding transportation activities of individuals within the urban cities in Alabama. These travel data are vital as inputs to develop and improve travel modeling within the state. The travel information collected will be the basis for updating parameters in urban planning models that predict future roadway traffic volumes. Therefore, improving the accuracy of the urban

planning models essentially improves the ability to forecast future traffic volumes and allows transportation professional in Alabama to make better decisions regarding investment in new roadway facilities and infrastructure. This report documents the development of the Internet based survey and presents the results of a case study performed for the Calhoun County Metropolitan Planning Organization.

The world development institutions commonly

present 'urban governance' as an antidote to the so-called 'urbanisation of poverty' and 'parasitic urbanism' in Africa.

Governance for Pro-Poor Urban Development is a comprehensive and systematic analysis of the meaning, nature, and effects of 'urban governance' in theory and in practice, with a focus on Ghana, a country widely regarded as an island of good governance in the sub region. The book

---

illustrates how diverse groups experience urban governance differently and contextualizes how this experience has worsened social differentiation in cities. This book will be of great interest to students, teachers, and researchers in development studies, and highly relevant to anyone with an interest in urban studies, geography, political economy, sociology, and African studies.

The concept of Quality Management began in the manufacturing sector, but a growing concern with quality in other areas of the economy has led to its wider application in service industries, government, education, and other not-for-profit agencies. A great quantity of material

related to quality management has been produced in recent years, much of it by small presses, professional and trade associations, and consultants. The Quality Management Sourcebook is the first in-depth, international guide to the most useful material and sources of information. The book

resource, Handbook of Health Survey Methods presents techniques necessary for confronting challenges that are specific to health survey research. The handbook guides readers through the development of sample designs, data collection procedures, and analytic methods for studies aimed at gathering health information on general and targeted

populations. The book is organized into five well-defined sections: Design and Sampling Issues, Measurement Issues, Field Issues, Health Surveys of Special Populations, and Data Management and Analysis. Maintaining an easy-to-follow format, each chapter begins with an introduction, followed by an overview of the main

concepts, theories, and applications associated with each topic. Finally, each chapter provides connections to relevant online resources for additional study and reference.
