Survival of the Prettiest Simon and Schuster

“A poet celebrates the wonders of nature in a collection of essays that could almost serve as a coming-of-age memoir.”

—Kirkus Reviews As a child, Nezhukumatathil called many places home: the grounds of a Kansas mental institution, where her Filipina mother was a doctor; the open skies and tall mountains of Arizona, where she hiked with her Indian father; and the chillier climes of western New York and Ohio. But no matter

where she was transplanted—no matter how awkward the fit or forbidding the landscape—she was able to turn to our world’s fierce and funny creatures for guidance. “What the peacock can do,” she tells us, “is remind you of a home you will run away from and run back to all your life.” The axolotl teaches us to smile, even in the face of unkindness; the touch-me-not plant shows us how to shake off unwanted advances; the narwhal demonstrates how to survive in hostile environments. Even in the strange and the unlovely, Nezhukumatathil finds beauty and kinship. For it is this way with wonder: it requires that we are curious enough to look past the distractions in order to fully appreciate the world’s gifts.

Project Hail Mary Anchor One of The New York Times Book Review's 10 Best Books of 2021 Shortlisted for the 2021 International Booker Prize and the 2021 National

Book Award for Translated Literature A fictional examination of the lives of real-life scientists and thinkers whose discoveries resulted in moral consequences beyond their imagining. *When We Cease to Understand the World* is a book about the complicated links between scientific and mathematical discovery, madness, and destruction. Fritz Haber, Alexander Grothendieck, Werner Heisenberg, Erwin Schrödinger—these are some of luminaries into whose troubled lives Benjamín Labatut thrusts the reader, showing us how they grappled with the most profound questions of existence. They have strokes of unparalleled genius, alienate friends and lovers, descend into isolation and insanity. Some of their discoveries reshape human life for the better; others pave the way to chaos and unimaginable suffering. The lines are never clear. At a breakneck pace and with a wealth of disturbing detail, Labatut uses the imaginative resources of fiction to tell the stories of the scientists and

mathematicians who expanded our notions of the possible.

A provocative and
thoroughly
researched inquiry
into what we find

beautiful and why, skewering the myth that the pursuit of beauty is a learned behavior. In *Survival of the Prettiest*, Nancy Etcoff, a faculty member at Harvard Medical School and a practicing psychologist at Massachusetts General Hospital, argues that beauty is neither a cultural construction, an invention of the fashion industry, nor a backlash against feminism—it's in our biology. Beauty, she explains, is an essential and ineradicable part of human nature that is revered and ferociously pursued in nearly every civilization—and for good reason. Those features to which we are most attracted are often signals of fertility and fecundity. When seen in the context of a Darwinian

struggle for survival, our sometimes extreme attempts to attain beauty—both to become beautiful ourselves and to acquire an attractive partner—suddenly become much more understandable. Moreover, if we understand how the desire for beauty is innate, then we can begin to work in our own interests, and not just the interests of our genetic tendencies. *Fragile Species* A&C Black As described in this fascinating book, *Evo Devo* is evolutionary development biology, the third revolution in the science, which shows how the endless forms of animals--butterflies and zebras, trilobites and dinosaurs, apes and humans--were made and evolved. *Science And Human Behavior*

"Vinge is one of the best visionary writers of SF today."—David Brin
Thousands of years in the future, humanity is no longer alone in a universe where a mind's potential is determined by its location in space, from superintelligent entities in the *Transcend*, to the limited minds of the *Unthinking Depths*, where only simple creatures, and technology, can function. Nobody knows what strange force partitioned space into these "regions of thought," but when the warring Straumli realm use an ancient

Transcendent artifact as a weapon, they unwittingly unleash an awesome power that destroys thousands of worlds and enslaves all natural and artificial intelligence. Fleeing this galactic threat, Ravna crash lands on a strange world with a ship-hold full of cryogenically frozen children, the only survivors from a destroyed space-lab. They are taken captive by the Tines, an alien race with a harsh medieval culture, and used as pawns in a ruthless power struggle. Tor books by Vernor Vinge

*How to Survive Middle
School: Science Anchor*

Biologist Mackenzie
Connor is charged with
protecting the human
race after a
devastating alien
invasion in this first
book in the Species
Imperative science
fiction series *Herself*
a biologist, Julie E.
Czerneda has earned a
reputation in science
fiction circles for her
ability to create
beautifully crafted,
imaginative, yet
believably realized
alien races. In
Survival, the first
novel in her new
series, *Species
Imperative*, she draws
upon this talent to
build races,
characters, and a
universe which will
draw readers into a
magnificent tale of
interstellar intrigue,
as an Earth scientist
is caught up in a
terrifying interspecies
conflict. Senior co-
administrator of the
Norcoast Salmon
Research Facility, Dr.
Mackenzie Connor, Mac
to her friends and
colleagues, was a
trained biologist,
whose work had
definitely become her
life. And working at
Norcoast Base, set in
an ideal location just
where the Tannu River
sped down the west side
of the Rocky Mountains
to the Pacific Coast

was the perfect situation for Mac. She and fellow scientist Dr. Emily Mamani were just settling in to monitor this year's salmon runs when their research was interrupted by the unprecedented arrival of Brymn, the first member of the alien race known as the Ohryn to ever set foot on Earth. Brymn was an archaeologist, and much of his research had focused on a region of space known as the Chasm, a part of the universe that was literally dead, all of its worlds empty of any life-forms, though traces existed of the civilizations that must once have flourished in the region. Brymn had sought out Mac because she was a biologist -- a discipline strictly forbidden among his own people -- and he felt that through her expertise she might be able to help him discover what had created the Chasm. But Mac had little interest in alien races and in studies that ranged beyond Earth, and as politely as she was capable of, she tried to make it clear that she was unwilling to abandon her own work. However, the decision was soon taken out of

her hands when a mysterious and devastating attack on the Base resulted in the abduction of Emily, and forced Mac to flee for her life with Brymn and the Earth special agents who were escorting him. Suddenly, it appeared that Earth itself might be under attack by the legendary race the Ohryn called the Ro, the beings they thought might be the destructive force behind the Chasm. Cut off from everything and everyone she knew, Mac found herself in grave danger and charged with the responsibility of learning everything she could that might possibly aid Earth in protecting the human race from extinction... *Earth Abides*

A penetrating take on how our planet would respond without the relentless pressure of the human presence
When We Cease to Understand the World
University of Chicago Press
The phrase 'survival of the fittest' conjures an image of the most cutthroat

individuals rising to the top. But Stefan Klein, author of the international bestseller *The Science of Happiness*, makes the startling assertion that the key to achieving lasting personal and societal success lies in helping others. Klein argues that altruism is in fact our defining characteristic: natural selection favoured those early humans who cooperated in groups. With their survival more assured, our altruistic ancestors were free to devote brainpower to developing intelligence, language, and culture -- our very humanity. As Klein puts it, 'We humans became first the friendliest and then the most intelligent apes.' To build his persuasive case for how altruistic behaviour made us human -- and why it pays to get along -- Klein brings together an extraordinary array of material: current research on genetics and the brain, economics, social psychology, behavioural and anthropological experiments, history, and modern culture. Ultimately, his groundbreaking findings lead him to a vexing

question: if we're really hard-wired to act for one another's benefit, why aren't we all getting along? Klein believes we've learned to mistrust our generous instincts because success is so often attributed to selfish ambition. In *Survival of the Nicest*, he invites us to rethink what it means to be the 'fittest' as he shows how caring for others can protect us from loneliness and depression, make us happier and healthier, reward us economically, and even extend our lives.

A Fire Upon The Deep Basic Books
The psychology classic—a detailed study of scientific theories of human nature and the possible ways in which human behavior can be predicted and controlled—from one of the most influential behaviorists of the twentieth century and the author of *Walden Two*. "This is an important book, exceptionally well written, and logically

consistent with the basic premise of the unitary nature of science. Many students of society and culture would take violent issue with most of the things that Skinner has to say, but even those who disagree most will find this a stimulating book."
—Samuel M. Strong, *The American Journal of Sociology* "This is a remarkable book—remarkable in that it presents a strong, consistent, and all but exhaustive case for a natural science of human behavior...It ought to be...valuable for those whose preferences lie with, as well as those whose preferences stand against, a behavioristic approach to human activity." —Harry Prosch, *Ethics*
