Survival rates are grouped based on how far the cancer has spread, but your age, overall health, how resectable the cancer is, type of mesothelioma, how well the cancer responds to treatment, and other factors can also affect your outlook. People now being diagnosed with MPM may have a better outlook than these numbers show.

Staging. The stage of mesothelioma at the time of diagnosis also influences survival rates. Early detection is the best way to improve a patient's mesothelioma prognosis. Early-stage mesothelioma diagnoses have higher survival rates than late-stage diagnoses. If diagnosed at stage 1 or 2, the disease is likely localized and can be targeted with surgery and other aggressive treatments.
