A great deal of the success of science has rested on its specific methods. One of which has been to start with the study of simple phenomena such as that of falling bodies, or to decompose systems into parts with well-defined properties simpler than those of the total system. In our time there is a growing awareness that in many cases of great practical or scientific interest, such as economics or the human brain, we have to deal with truly complex systems which cannot be decomposed into their parts without losing crucial properties of the total system. In addition, complex systems have many facets and can be looked at from many points of view. Whenever a complicated problem arises, some scientists or other people are ready to invent lots of beautiful words, or to quote Goethe "denn immer wo Begriffe fehlen, dort stellt ein Wort zur rechten Zeit sich ein" ("whenever concepts are lacking, a word appears at the right time"). Quite often such a procedure gives not only the layman but also scientists working in fields different from that of the inventor of these new words the impression that this problem has been solved, and I am occasionally shocked to see how influential this kind of "linguistics" has become.

An extraordinary and rare insight into how a few determined entrepreneurs created an icon... - C. K. Prahalad  
The targets were stupendous and considered unachievable by almost everyone. Slightly over two years to find a suitable partner, finalize all legal documentation, get governmental approval to these agreements as well as to the investment proposals, build a factory, develop a supplier base to meet localization regulations, create a sales and service network, and develop and launch a peoples car that would sell 100,000 a year, in a sector where Indian expertise was limited. And to do this as a public sector company, having to follow all governmental systems and procedures, and having to please both its masters in the government and Suzuki Motor Corporation. However, the Maruti project succeeded, and in ways that were unimaginable in 1983. The car revolutionized the

industry and put a country on wheels. Suddenly, ordinary middle-class men and women could aspire to own a reliable, economical and modern car, and the steep sales targets were easily met. Twenty-six years later, the company, now free of government controls and facing competition from the world's major manufacturers who have entered the Indian market, still leads the way. Not only that, cars made by Maruti can be seen in all continents. By any yardstick, it is an incredible story, involving grit, management skill and entrepreneurship of a high order. R.C. Bhargava, who was at the helm of the company, and is currently its chairman, co-writing with senior journalist and author Seetha, shows how it was done in this riveting account of a landmark achievement.

Careers in science, engineering, and medicine offer opportunities to advance knowledge, contribute to the well-being of communities, and support the security, prosperity, and health of the United States. But many women do not pursue or persist in these careers, or advance to leadership positions - not because they lack the talent or aspirations, but because they face barriers, including: implicit and explicit bias; sexual harassment; unequal access to funding and resources; pay inequity; higher teaching and advising loads; and fewer speaking invitations, among others. There are consequences from this underrepresentation of women for the nation as well: a labor shortage in many science, engineering, and medical professions that cannot be filled unless institutions and organizations recruit from a broad and diverse talent pool; lost opportunities for innovation and economic gain; and lost talent as a result of discrimination, unconscious bias, and sexual harassment. Promising Practices for Addressing the Underrepresentation of Women in Science, Engineering, and Medicine reviews and synthesizes existing research on policies, practices, programs, and other interventions for improving the recruitment, retention, and sustained advancement

into leadership roles of women in these disciplines. This report makes actionable recommendations to leverage change and drive swift, coordinated improvements to the systems of education, research, and employment in order to improve both the representation and leadership of women.

Rock & roll has transformed American culture more profoundly than any other art form. During the 1960s, it defined a generation of young people as political and social idealists, helped end the Vietnam War, and ushered in the sexual revolution. In *Dixie Lullaby*, veteran music journalist Mark Kemp shows that rock also renewed the identity of a generation of white southerners who came of age in the decade after segregation -- the heyday of disco, Jimmy Carter, and Saturday Night Live. Growing up in North Carolina in the 1970s, Kemp experienced pain, confusion, and shame as a result of the South's residual civil rights battles. His elementary school was integrated in 1968, the year Kemp reached third grade; his aunts, uncles, and grandparents held outdated racist views that were typical of the time; his parents, however, believed blacks should be extended the same treatment as whites, but also counseled their children to respect their elder relatives. "I loved the land that surrounded me but hated the history that haunted that land," Kemp writes. When rock music, specifically southern rock, entered his life, he began to see a new way to identify himself, beyond the legacy of racism and stereotypes of southern small-mindedness that had marked his early childhood. Well into adulthood Kemp struggled with the self-loathing familiar to many white southerners. But the seeds of forgiveness were planted in adolescence when he first heard Duane Allman and Ronnie Van Zant pour their feelings into their songs. In the tradition of music historians such as Nick Tosches and Peter Guralnick, Kemp masterfully blends into his narrative the stories of southern rock bands --from heavy hitters such as the Allman Brothers Band, Lynyrd Skynyrd, and R.E.M. to influential but less-known groups such as Drive-By Truckers -- as well as the personal experiences of their fans. In dozens of interviews, he charts the course of southern rock & roll. Before civil rights, the popular music of the South was a small, often racially integrated world, but after Martin Luther King Jr.'s assassination, black musicians struck out on their own. Their white counterparts were left to their own devices, and thus southern rock was born: a mix of popular southern styles that arose when predominantly white rockers combined rural folk, country, and rockabilly with the blues and jazz of African-American culture. This down-home, flannel-wearing, ass-kicking brand of rock took the nation by storm in the 1970s. The music gave southern kids who emulated these musicians a newfound voice.

Kemp and his peers now had something they could be proud of: southern rock united them and gave them a new identity that went beyond outside perceptions of the South as one big racist backwater. Kemp offers a lyrical, thought-provoking, searingly intimate, and utterly original journey through the South of the 1960s, '70s, '80s, and '90s, viewed through the prism of rock & roll. With brilliant insight, he reveals the curative and unifying impact of rock on southerners who came of age under its influence in the chaotic years following desegregation. *Dixie Lullaby* fairly resonates with redemption.

Culture and creativity have untapped potential to deliver social, economic, and spatial benefits for cities and communities. Cultural and creative industries are key drivers of the creative economy and represent important sources of employment, economic growth, and innovation, thus contributing to city competitiveness and sustainability. Through their contribution to urban regeneration and sustainable urban development, cultural and creative industries make cities more attractive places for people to live in and for economic activity to develop. Culture and creativity also contribute to social cohesion at the neighborhood level, enable creative networks to form and advance innovation and growth, and create opportunities for those who are often socially and economically excluded. The ongoing COVID-19 pandemic has had a deep impact on the cultural sector, yet it has also revealed the power of cultural and creative industries as a resource for city recovery and resilience.

More generally, cities are hubs of the creative economy and have a critical role to play in harnessing the transformative potential of cultural and creative industries through policies and enabling environments at the local level. 'Cities, Culture, and Creativity' (CCC) provides guiding principles and a CCC Framework, developed by UNESCO and the World Bank, to support cities in unlocking the power of cultural and creative industries for sustainable urban development, city competitiveness, and social inclusion. Drawing from global studies and the experiences of nine diverse cities from across the world, the CCC Framework offers concrete guidance for the range of actors -- city, state, and national governments; creative industry and related private-sector organizations; creatives; culture professionals and civil society-- to harness culture and creativity with a view to boosting their local creative economies and building resilient, inclusive, and dynamic cities.

On a Global Mission: The Automobiles of General Motors International Volume 3 Knowledge Flow

Electronic open access edition funded by the National Endowment for the Humanities. Covering from 1915 to the present, this book deals with the role that artists and intellectuals have played regarding projects of European integration. Consciously or not, they partake of a tradition of Euroskepticism. Because Euroskepticism is often associated with the discourse of political elites, its literary and artistic expressions have gone largely unnoticed. This book addresses that gap. Taking Spain as a case study, author Luis Mart í n-Estudillo analyzes its conflict over its own Europeanness or exceptionalism, as well as the European view of Spain. He ranges from canonical writers like Unamuno, Ortega y Gasset, and Zambrano to new media artists like Valeriano L ó pez, Carlos Spottorno, and Santiago Sierra. Mart í n-Estudillo provides a new context for the current refugee crisis, the North-South divide among EU countries, and the generalized disaffection toward the project of European integration. The eclipsed critical tradition he discusses contributes to a deeper understanding of the notion of Europe and its institutional embodiments. It gives resonance to the intellectual and cultural history of Europe's "peripheries" and re-evaluates Euroskeptic contributions as one of the few hopes left to imagine ways to renew the promise of a union of the European nations.

"Neither an academic tome nor a prescriptive 'how to' guide, *The Theory and Practice of Online Learning* is an illuminating collection of essays by practitioners and scholars active in the complex field of distance

education. Distance education has evolved significantly in its 150 years of existence. For most of this time, it was an individual pursuit defined by infrequent postal communication. But recently, three more developmental generations have emerged, supported by television and radio, teleconferencing, and computer conferencing. The early 21st century has produced a fifth generation, based on autonomous agents and intelligent, database-assisted learning, that has been referred to as Web 2.0. The second edition of "The Theory and Practice of Online Learning" features updates in each chapter, plus four new chapters on current distance education issues such as connectivism and social software innovations." --BOOK JACKET.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
