Australia's most famous Aboriginal painter is dead...supposedly killed when a heavy object tumbled onto him in his studio during an earth tremor. But then doubts arise. For a start, the police now suspect murder. And why was the victim heard earlier predicting his own violent death? Enter private detective Johnny Ravine to solve the mystery...he suddenly finds himself thrust into a byzantine world of art and artists where questions are far more numerous than answers. Where did the victim's art dealer obtain the incredibly rare artwork that he was secretly selling? Is the controversial 'green energy' company Rokpower really going to harness power from hot rocks deep under the ground, and did it kill the artist's Dreaming spirit when it

injected water onto the rocks? And who is the beautiful and mysterious Asian lady who seems to be able to converse with the dead, and who says she knows how the artist really died? A killer is on the loose and even Johnny's own life is in danger. But first he needs to understand that the death of the artist has unleashed spiritual forces that threaten an entire community.

This book addresses contemporary philosophical issues in higher education and how we can create socially just pedagogies and a socially just university. Providing a forum for thinking through how critical

posthumanism, affect theory and feminist new materialisms provide a useful lens for higher education, and shows how these standpoints can benefit methods and practices of learning and teaching. Gross inequalities in higher education continue to affect pedagogical practices across geopolitical contexts and there is a need to consider new theories which call into question the commonplace humanist assumptions currently dominating the discourse around social justice in this context. However scholarship on the affective turn, critical posthumanism and new material feminisms, opens both new possibilities and responsibilities for higher education pedagogies. The approaches of this book also provide imaginative ways of engaging with current dissatisfactions with higher education, from the marketization of education, to issues of racism, discrimination and lack of diversity. Of international relevance, this collection particularly foreground southern contexts and case

studies, such as the student activism in South African universities that has sparked a global project of decolonization and social justice in educational institutions. This book is an urgent call to reconceptualize, rethink and reconfigure pedagogies in higher education and the implications for future citizenship and social participation.

Plotting the Globe W. W. Norton & Company
This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously

growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Emerging in the 1970s, prog rock was often accused of being overly technical, too elaborate, not focused on its audience and often in

danger of disappearing up it's own a---!One could argue that the service and experience space is starting to exhibit some of the same characteristics namely it's in danger of becoming overly technical, benchmarked, frameworked, measured, codified, certified, specialized and functionalized etc etc.Punk exploded out of the back of prog rock with it's democratic, DIY, back to basics approach that inspired both a cultural and musical movement and change in mindset. It dared to be different and was OK with the fact that not everyone liked that.So, is it time to consider what a punk rock version of CX would look and feel like, particularly given that many reports suggest that around 70 percent of customer experience projects fail to deliver on their promises? If so, what would that look and feel like.Adrian Swinscoe in his new book 'Punk CX',

tackles some of these questions and shares some key insights and practical takeaways that will allow you harness your inner punk and transform your own customer experience.

In Mordin On Time, Nick Mordin sets out his method for answering the most fundamental question facing punters in any race, namely: which is the fastest

horse? He was timing the sections of races with a stop watch, estimating wind strength and direction, adjusting for movements of running rails, using projected times and calculating average times years before the best-selling American books on speed rating were published. This new edition incorporates much new material, including standard times for all Irish racecourses (plus the major French ones). Mordin On Time enables the reader to construct their own speed ratings wherever they live.
