"What began in 1959 as a simple homage to the modernist poet H.D. (Hilda Doolittle) developed into an expansive and unique quest for a poetics that would fuel Duncan's great work into the 1960s and 1970s. A meditation on both the roots of modernism and its manifestation in the writings of H.D., Djuna Barnes, Ezra Pound, D.H. Lawrence, Gertrude Stein, William Carlos Williams, Virginia Woolf, and many others, Duncan's wide-ranging work is especially notable for illuminating the role women played in creating literary modernism"--From publisher description.

This book addresses basic and applied aspects of two nexus points of microorganisms in agro-ecosystems, namely their functional role as bio-fertilizers and bio-pesticides. Readers will find

detailed information on all of the aspects that are required to make a microbe “ agriculturally beneficial. ” A healthy, balanced soil ecosystem provides a habitat for crops to grow without the need for interventions such as agro-chemicals. No organism in an agro-ecosystem can flourish individually, which is why research on the interaction of microorganisms with higher forms of life has increasingly gained momentum in the last 10-15 years. In fact, most of plants ’ life processes only become possible through interactions with microorganisms. Using these “ little helpers ” as a biological alternative to agro-chemicals is a highly contemporary field of research. The information presented here is based on the authors ’ extensive experience in the subject area, gathered in the course of their careers in the field of agricultural microbiology. The book offers a valuable resource for all readers who are actively involved in research on agriculturally beneficial microorganisms. In addition, it will help prepare readers for the future challenges that climate change will pose for agriculture and will help to bridge the current gaps between different scientific communities.

This book highlights the implications of nanotechnology and the effects of nanoparticles on agricultural systems, their interactions with plants as well as their potential applications as fertilizers and pesticides. It also discusses how innovative, eco-friendly approaches to improve food and agricultural systems lead to increased plant productivity. Further, it offers insights into the current trends and future prospects of nanotechnology along with the benefits and risks and their impact on agricultural ecosystems. Nanomaterials in agriculture reduce the amount of chemical products sprayed by means of smart delivery of active ingredients; minimize nutrient losses in fertilization; and increase yields through optimized water and nutrient management. There is also huge potential for nanotechnology in the provision of state-of-the-art solutions for various challenges faced by agriculture and society, both today and in the future.

Twentyfour years have gone by since the publication of K. Lohner and H. Muller's comprehensive work "Gemischbildung und Verbrennung im Ottomotor" in 1967 [1.1] Naturally, the field of mixture formation and combustion in the spark-ignition engine has witnessed great technological advances and many new findings in the intervening years, so that the time seemed ripe for presenting a summary of recent research and developments. Therefore, I gladly took up the suggestion of the editors of this series of books, Professor Dr. H. List and Professor Dr. A. Pischinger, to write a book summarizing the present state of the art. A center of activity of the Institute of Internal-Combustion Engines and Automotive Engineering at the Vienna Technical University, which I am heading, is the field of mixture formation -there fore, many new results that have been achieved in this area in collaboration with the respective industry have been included in this volume. The basic principles of combustion are discussed only to that extent which seemect necessary for an understanding of the effects of mixture formation. The focal point of this volume is the mixture formation in spark-ignition engines, covering both the theory and actual design of the mixture formation units and appropriate intake manifolds. Also, the related measurement technology is explained in this work.

This book discusses the most challenging task ahead of researchers from India and around the globe: providing disease-free field crops for the ever-growing world population. In Asia, despite being cultivated in massive volumes, major crops, including cereals, oil seed, tuber and non-tuber vegetables, and fruit, are not meeting the demands of the increasing population. This book showcases naturally occurring beneficial microbes in the form of plant growth promoting rhizobacteria, or PGPR, which make it possible to grow field crops without applying synthetic chemicals. Our understanding of PGPR has increased exponentially in recent decades. They play a multifarious role in developing sustainable systems of crop production and protection. The book focuses on the mechanistic behaviors of PGPRs, their use to develop sustainable cultivation techniques, and their application to enhance crop growth and productivity at the cutting edge of tech-oriented agriculture and to replace hazardous chemicals with microbial inoculants. The book is useful to agronomists, microbiologists, ecologists, plant pathologists, molecular biologists, environmentalists, policy makers, conservationists, and NGOs working on organically grown field crops.

An extraordinary and rare insight into how a few determined entrepreneurs created an icon... - C. K. Prahalad
The targets were stupendous and considered unachievable by almost everyone. Slightly over two years to find a suitable partner, finalize all legal documentation, get governmental approval to these agreements as well as to the investment proposals, build a factory, develop a supplier base to meet localization regulations, create a sales and service network, and develop and launch a peoples car that would sell 100,000 a year, in a sector where Indian expertise was limited. And to do this as a public sector company, having to follow all governmental systems and procedures, and having to please both its masters in the government and Suzuki Motor Corporation. However, the Maruti project succeeded, and in ways that were unimaginable in 1983. The car revolutionized the industry and put a country on wheels. Suddenly, ordinary middle-class men and women could aspire to own a reliable, economical and modern car, and the steep sales targets were easily met. Twenty-six years later, the company, now free of government controls and facing competition from the worlds major manufacturers who have entered the Indian market, still leads the way. Not only that, cars made by Maruti can be seen in all continents. By any yardstick, it is an incredible story, involving grit, management skill and entrepreneurship of a high order. R.C. Bhargava, who was at the helm of the company, and is currently its chairman, co-writing with senior journalist and author Seetha, shows how it was done in this riveting account of a landmark achievement.

Examining the implications of recent important developments, the primary aim of this book is to bridge the gaps in existing literature on India-Pakistan economic engagement and to examine various aspects of the trade normalization process. The book includes familiar themes of India-Pakistan bilateral trade in goods and services, providing new insights into the potential for trade and the challenges involved in realizing it. The respective chapters examine the current trade trends and identify the possible sectors for bilateral FDI flows between the two countries, which could help forge deeper economic ties between them. In light of India ' s changed investment policy, this analysis is pertinent for investors and policy-makers alike. The book also includes chapters on a variety of unconventional subjects, such as estimating the levels of informal trade, an analysis of a trade perception survey and identifying trade potential using a CGE modeling approach. Further, a number of sectors have been identified for in-depth analysis, including sports goods, healthcare and energy. These sector-based analyses reflect the gap between current levels of trade in the selected industries and the possible trade potential. The studies identify key tradable commodities in the health and sports industries, as well as opportunities for trading in energy. The book thus provides readers with a deep understanding of the process of normalizing economic relations and enhancing bilateral trade at the micro and macro levels, on the basis of which the authors subsequently provide recommendations for policymakers.
