This book, translated from Italian, discusses the
influence of Galileo on Hobbes ' natural
philosophy. In his De motu, loco et tempore or Anti-
White (~ 1643), Thomas Hobbes describes Galileo as
" the greatest philosopher of all times " , and in De
Corpore (1655), the Italian scientist is presented as
the one who " opened the door of all physics, that is,
the nature of motion. " The book gives a detailed
analysis of Galileo ' s legacy in Hobbes ' s
philosophy, exploring four main issues: a comparison
between Hobbes ' and Mersenne ' s natural
philosophies, the Galilean Principles of Hobbes '
philosophical system, a comparison between
Galileo ' s momentum and Hobbes ' s conatus , and
Hobbes ' and Galileo ' s theories of matter. The
book also analyses the role played by Marin
Mersenne, in spreading Galileo ' s ideas in France,
and as a discussant of Hobbes. It highlights the many
aspects of Hobbes ' relationship with Galileo: the

methodological and epistemological elements, but also the conceptual and the lexical analogies in the field of physics, to arrive, finally, at a close comparison on the subject of the matter. From this analysis emerges a shared mechanical conception of the universe open and infinite, that replaces the Aristotelian cosmos, and which is populated by two elements only: matter and motion.

Following the success of the previous editions, this popular introductory text continues to provide thorough, up-to-date information covering a broad range of topics in food science, with emphasis on

food processing and handling and the methodology of specific foods. Presenting a multitude of easy-to-understand figures, tables, illustrated concepts and methods. This text maintains the strengths of the previous edition while adding new information. The book opens with a revised chapter on what food science actually is, detailing the progression of food science from beginning to future. Succeeding chapters include the latest information on food chemistry and dietary recommendations, food borne diseases and microbial activity. A complete revision of HACCP is outlined, accompanied by numerous examples of flow charts and applications, as well as major additions on food labeling. Extensive updates have been made on processing methods and handling of foods, such as new procedures on: candy making; coffee and tea

production; beer and wine production; soft drinks; ultra high temperature processing; aseptic packaging; aquaculture and surimi; and UHT and low temperature pasteurization of milk. In addition, there is a completely new section which includes safety and sanitation as well as laboratory exercises in sensory, microbiological, chemical quality test, and processing methods for a variety of the foods described in previous chapters.

In November, 1997, The Institute of Medicine convened a one-day conference to explore areas for potential collaboration to improve quality among competing health plans consistent with antitrust and other legal requirements. The conference was convened to clarify the limits of such potential activities and to explore ways to stimulate

collaboration; in short, to explore permissible and promising areas for collaboration for competing health plans. Competition has existed at the provider level in the pre-managed care era and continues among physicians, physician groups and hospitals today. What is new is the extent of competition at the managed care organization level in individual regional markets. As large numbers of individuals are enrolled in health plans, the potential for new forms of cooperation for improving quality of care becomes possible. Along with these new possibilities, however, come questions about whether they bring the potential for antitrust violation.
