The Second Conference on Mechanisms, Transmissions and Applications - MeTrApp 2013 was organised by the Mechanical Engineering Department of the University of the Basque Country (Spain) under the patronage of the IFToMM Technical Committees Linkages and Mechanical Controls and Micromachines and the Spanish Association of Mechanical Engineering. The aim of the workshop was to bring together researchers, scientists, industry experts and students to provide, in a friendly and stimulating environment, the opportunity to exchange know-how and promote collaboration in the field of Mechanism and Machine Science. The topics treated in this volume are mechanism and machine design, biomechanics, mechanical transmissions, mechatronics, computational and experimental methods, dynamics of mechanisms and micromechanisms and microactuators.

The global automotive industry faces the most influential changes since the revolutionary introduction of mass production a century ago. Latecomer firms from Asia are challenging the western incumbents. They can change the rules of the game in the industry by leapfrogging several steps in their development process. This study seeks to contribute to the discussion of latecomer firms by gaining insights into the catch up processes of five automotive companies in the passenger car segment, namely BYD (PRC), Chery (PRC), Geely (PRC), Tata Motors (India) and Mahindra & Mahindra (India). Based on learning theories and the core processes of car manufacturers, the author develops a catch up framework in order to compare automotive latecomers. The Korean manufacturer Hyundai serves as an example for a successful catch up, and provides a contextual framing for catch up processes in the automotive sector. An analysis of

empirical data provides evidence for the evaluation of the catch up status of the five challenger firms. The author emphasizes the influence of institutional settings in China and India and the role of business groups that can act as facilitators for the catch up process. Finally, the study clusters the catch up strategies of the five observed companies in order to compare their approach.

The electric vehicle and plug-in hybrid electric vehicle play a fundamental role in the forthcoming new paradigms of mobility and energy models. The electrification of the transport sector would lead to advantages in terms of energy efficiency and reduction of greenhouse gas emissions, but would also be a great opportunity for the introduction of renewable sources in the electricity sector. The chapters in this book show a diversity of current and new developments in the electrification of the transport sector seen from the electric vehicle point of view: first, the related technologies with design, control and supervision, second, the powertrain electric motor efficiency and reliability and, third, the deployment issues regarding renewable sources integration and charging facilities. This is precisely the purpose of this book, that is, to contribute to the literature about current research and development activities related to new trends in electric vehicle power trains.

Impressions of America During The Years 1833, 1834, and 1835. In Two Volumes, Volume II. by

Tyrone Power This rocky peninsula is truly a very wild and unworldlike little territory, jutting boldly out

as it does into the mighty bay of Massachusetts, and commanding a view of its whole extent, from Cape

Cod to Cape Anne, together with the many islands, towns, and villages scattered along the coast; whilst

in front spreads out the Atlantic Ocean. We are delighted to publish this classic book as part of our

extensive Classic Library collection. Many of the books in our collection have been out of print for

decades, and therefore have not been accessible to the general public. The aim of our publishing

program is to facilitate rapid access to this vast reservoir of literature, and our view is that this is a

significant literary work, which deserves to be brought back into print after many decades. The contents

of the vast majority of titles in the Classic Library have been scanned from the original works. To ensure

a high quality product, each title has been meticulously hand curated by our staff. Our philosophy has

been guided by a desire to provide the reader with a book that is as close as possible to ownership of the

original work. We hope that you will enjoy this wonderful classic work, and that for you it becomes an

enriching experience.

The improvement of exercise performance in sports not only involves the enhancement of

physical strength, but also includes the development of psychological and cognitive functions.

There is an increasing body of evidence to show that physical exercise is a powerful way to

improve a number of aspects of cognition and brain function at the systemic and behavioral

levels. Yet, several questions remain: What type of exercise program is optimal for improving

cognitive functions? What are the real effects of certain innovative exercise protocols on the

relationship between behavior and the brain? To what extent do ergogenic aids boost cognitive

function? How efficient are neuromodulation techniques in relation to behavioral performance?

The answers to these questions likely require multidisciplinary insights not only from physiologists

and sports scientists, but also from neuroscientists and psychologists. The manuscripts published

(16 research papers and one perspective article from various academic fields) in this Special Issue

Book " Exercise: A Gate That Primes the Brain to Perform " bring together current knowledge

and novel directions in human exercise-cognition research dealing with performance. This book

showcases the various relationships between cognitive function, brain activity, and behavioral

performance with applications in sports and exercise science.
