Plant and Human Health, Volume 1 Haynes Publishing

Over the past few years, increasing attention has been paid to the search for bioactive compounds from natural sources. The success of plant-derived products such as paclitaxel (Taxol) in tumor therapy or artemisinin in the treatment of malaria has provided the impetus for the introduction of numerous research programmes, especially in Industry. A great deal of effort is being expended in the generation of novel lead molecules of vegetable, marine and microbial origin by the use of high throughput screening protocols. When interesting hits are found, it is essential to have methods available for the rapid isolation of target compounds. For this reason, both industry and academia need efficient preparative chromatographic separation techniques and experience in their application. Purified natural products are required for complete spectroscopic identification and full characterization of new compounds, for biological testing and for the supply of pharmaceuticals, standards, and starting materials for synthetic work. Obtaining pure products from an extract can be a very long, tedious and expensive undertaking, involving many steps. Sometimes only minute amounts of the desired compounds are at hand and these entities may be labile. Thus it is an advantage to have access to as many different methods as possible in order to aid the isolation process. Although a certain amount of trial and error may be involved, nowadays there is the possibility of devising suitable rapid separation

schemes by a judicious choice of the different techniques available.

This book presents a systematic approach to
the potential pulmonary complications of
various systemic non-pulmonary pediatric
disorders. Chapters focus on the pulmonary
complications associated with: the major
organ systems, types of disorders, metabolic
conditions, and various modalities. Although
specific diseases will be discussed, the main
focus will be on describing the associated
organ mechanisms and how they can
negatively affect the respiratory system. Each
chapter will also discuss methods of
prevention, the diagnostic test(s) that may be
necessary to diagnose or monitor these
complications, and, if applicable, the
recommended therapeutic modalities.
Pulmonary Complications of Non-
Pulmonary Pediatric Disorders provides
pulmonologists, pediatricians, and other
clinicians with a detailed, reliable explanation
of seemingly unrelated signs and symptoms so
they can form a more thorough differential
diagnosis and prescribe the appropriate
diagnostic tests and treatment.

Synthesis of Marine Natural Products 2 John
Wiley & Sons

Volumes five and six of Bioorganic Marine
Chemistry differ from their predecessors in two
respects - they deal exclusively with laboratory
synthesis of marine natural products and they
represent the effort of a single author and his
associates. The rationale for these departures is
readily perceived. For several decades organic
synthesis has without doubt been the most
spectacular branch of organic chemistry. While
the late R.B. Woodward's dictum - organic
compounds can undergo only four basic
reactions: they can gain electrons; they can lose
electrons; they can be transformed with acid or
with base - is still true, the wealth and variety of
available reagents which will accomplish chemical
transformations has reached staggering
proportions. Little wonder then, that synthetic
methodology has achieved a high degree of
predictability and total synthesis of natural
products has been successfully directed toward

ever more challenging targets. As for the second point, that of single authorship, multiple authorship would invariably have led to gaps and overlaps, thus making it difficult to assemble and assess recent research in a systematic and comprehensive fashion.

Early anthropological evidence for plant use as medicine is 60,000 years old as reported from the Neanderthal grave in Iraq. The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East. Today, around 1.4 billion people in South Asia alone have no access to modern health care, and rely instead on traditional medicine to alleviate various symptoms.

On a global basis, approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life-threatening conditions that include diabetes, hypertension and cancers. As the demand for plant-based medicine rises, there is an unmet need to investigate the quality, safety and efficacy of these herbals by the "scientific methods". Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical, phytochemical, analytical, and molecular techniques. For instance, high throughput robotic screens have been developed by industry; it is now possible to carry out 50,000 tests per day in the search for compounds, which act on a key enzyme or a subset of receptors. This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions. However, drug development from natural products is not without its problems. Frequent challenges encountered include the procurement of raw materials, the selection and implementation of appropriate high-throughput bioassays, and the scaling-up of preparative procedures. Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant-based therapeutics. The main objective of *Plant and Human Health* is to serve as a comprehensive guide for this endeavor. Volume 1 highlights how humans from specific areas or cultures use indigenous plants. Despite technological developments, herbal drugs still occupy a preferential place in a majority of the

population in the third world and have slowly taken roots as alternative medicine in the West. The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship. Volume 2 deals with the phytochemical and molecular characterization of herbal medicine. Specifically, it focuses on the secondary metabolic compounds, which afford protection against diseases. Lastly, Volume 3 discusses the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health. Together this three-volume collection intends to bridge the gap for herbalists, traditional and modern medical practitioners, and students and researchers in botany and horticulture.

"A great American tale told with a deft historical eye, painstaking analysis, and a supple clarity of writing." —Jean Baker "My husband considered you a dear friend," Mary Todd Lincoln wrote to Frederick Douglass in the weeks after Lincoln's assassination. The frontier lawyer and the former slave, the cautious politician and the fiery reformer, the President and the most famous black man in America—their lives traced different paths that finally met in the bloody landscape of secession, Civil War, and emancipation. Opponents at first, they gradually became allies, each influenced by and attracted to the other. Their three meetings in the White House signaled a profound shift in the direction of the Civil War, and in the fate of the United States. James Oakes has written a masterful narrative history, bringing two iconic figures to life and shedding new light on the central issues of slavery, race, and equality in Civil War America.
