Amiga Game Maker's Manual Chronicle Books  
Neural Information Processing and VLSI provides a unified treatment of this important subject for use in classrooms, industry, and research laboratories, in order to develop advanced artificial and biologically-inspired neural networks using compact analog and digital VLSI parallel processing techniques. Neural Information Processing and VLSI systematically presents various neural network paradigms, computing architectures, and the associated electronic/optical implementations using efficient VLSI design

methodologies. Conventional digital machines cannot perform computationally-intensive tasks with satisfactory performance in such areas as intelligent perception, including visual and auditory signal processing, recognition, understanding, and logical reasoning (where the human being and even a small living animal can do a superb job). Recent research advances in artificial and biological neural networks have established an important foundation for high-performance information processing with more efficient use of computing resources. The secret lies in the design optimization at various levels of computing and communication of intelligent machines. Each neural network system consists of massively paralleled and distributed signal processors with every processor performing very simple operations, thus consuming little power. Large computational capabilities of these systems in the range of some hundred giga to several tera operations per second are derived from collectively parallel processing and efficient data

routing, through well-structured interconnection networks. Deep-submicron very large-scale integration (VLSI) technologies can integrate tens of millions of transistors in a single silicon chip for complex signal processing and information manipulation. The book is suitable for those interested in efficient neurocomputing as well as those curious about neural network system applications. It has been especially prepared for use as a text for advanced undergraduate and first year graduate students, and is an excellent reference book for researchers and scientists working in the fields covered.

People and Computers XVIII - Design for Life  
Springer Science & Business Media

This book describes how corporate powers have erected a rapacious system of intellectual property rights to confiscate the benefits of creativity in science and culture. This legal system threatens to derail both economic and scientific progress, while disrupting society and threatening personal

---

freedom. Perelman argues that the natural outcome of this system is a world of excessive litigation, intrusive violations of privacy, the destruction of higher education, interference with scientific research, and a lopsided distribution of income.

Free energy constitutes the most important thermodynamic quantity to understand how chemical species recognize each other, associate or react. Examples of problems in which knowledge of the underlying free energy behaviour is required, include conformational equilibria and molecular association, partitioning between immiscible liquids, receptor-drug interaction, protein-protein and protein-DNA association, and protein stability. This volume sets out to present a coherent and comprehensive account of the concepts that underlie different approaches devised for the determination of free energies. The reader will gain the necessary insight into the theoretical and computational foundations of the subject and will be presented with relevant applications from molecular-level modelling and simulations of chemical and biological systems. Both formally accurate and approximate methods are covered using both classical and quantum mechanical descriptions. A central theme of the book is that the wide

---

variety of free energy calculation techniques available today can be understood as different implementations of a few basic principles. The book is aimed at a broad readership of graduate students and researchers having a background in chemistry, physics, engineering and physical biology.

The book consists of 35 extended chapters which have been based on selected submissions to the poster session organized during the 3rd Asian Conference on Intelligent Information and Database Systems (20-22 April 2011 in Daegu, Korea). The book is organized into four parts, which are information retrieval and management, data mining and computational intelligence, service composition and user-centered approach, and intelligent management and e-business, respectively. All chapters in the book discuss theoretical and practical issues related

to integration of artificial intelligence and database technologies in order to develop various intelligent information systems in many different domains. Such combination of artificial intelligence and database technologies has been regarded as one of the important interdisciplinary subfields of modern computer science, due to the sustainable development of networked information systems. Especially, service-oriented architecture and global multimedia systems used on a number of different purpose call for these developments. The book will be of interest to postgraduate students, professors and practitioners in the areas of artificial intelligence and database systems to modern information environments. The editors hope that readers of this volume can find many inspiring ideas and influential practical examples and use them in their future work.

The new edition of an introduction to computer programming within the context of the visual arts, using the open-source programming language Processing; thoroughly updated throughout. The visual arts are rapidly changing as media moves into the web, mobile devices, and architecture. When designers and artists learn the basics of writing software, they develop a new form of literacy that enables them to create new media for the present, and to imagine future media that are beyond the capacities of current software tools. This book introduces this

A comprehensive guide for health care workers worldwide, especially in areas with few medical resources. Designed as a manual for people confronting the HIV epidemic in their communities, no medical or technical knowledge or prior training in HIV prevention and

care of people with AIDS is required. Topics range from the biology of the virus to designing successful prevention programmes and writing grant proposals. Risk factors for infection are discussed and suggestions given of helpful methods for explaining them and assisting people to change their behaviour. Extensive discussions of complex medical treatments not available to 95 percent of the people in the world who have HIV are avoided, focusing instead on medical interventions available in less industrialized settings.

Illustrations highlight important topics and increase the accessibility of the text. An appendix aimed at readers with medical training discusses common AIDS-related illnesses and their treatment.

The eighteenth annual British HCI Conference chose as its theme Design for Life. 'Life' has many facets, from work (of course, or should we say inevitably!) to travel, fun and other forms of leisure. We selected 23 full papers out of 63

submitted, which covered our interaction with computer systems in a variety of types of life situation — including games, tourism and certain types of work — and also covered a variety of stages in our lives, from the young to the elderly.

These papers were complemented by others that described more traditional aspects of research in the field of human-computer interaction. In putting together the programme we followed a three-stage process. First each paper was reviewed by at least three reviewers. Then a member of the committee conducted a meta-review. Finally, all sets of reviews were considered by the technical chairs who assembled a programme that was submitted to, and approved by, the full committee. This process was greatly assisted by the use of the Precision Conference Solutions web-based submission system. Even more important, of course, were the volunteer reviewers themselves. In recognition, this year we have made an award for the best reviewer as well as one for the best paper.
