This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz

Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

"In the United States, the practice of interior design has been considered women's territory, regarded by the majority of architects, most of whom are male, as a lesser discipline. In the past 150 years, however, designing women have made their mark, first as domestic decorators and since the late 1940s as interior designers responsible for the planning, furnishing, and

execution of the interior architecture of multimillion dollar corporate, financial, and other "important" environments for thousands of people." "Women of Design profiles thirty-two of these working women: the first generation of American women to dominate the world of commercial interior design, a multibillion dollar industry in the United States. They have overcome gender discrimination to establish themselves successfully as heads of their own independent practices or as valued principals in some of the largest interior design firms in the country. They have excelled as creators of spaces and products and as business people, serving as models for and opening the doors to a new generation of American women interior designers. Their designs for a variety of projects, ranging from retail, office, commercial, hotel, and restaurant environments, as

well as residential gems, stand as proof of the immense pool of talented women who have emerged as leaders in a particular industry. Some of those included have also entered the world of design education, serving as deans and teachers at prominent design schools, molding and training future talents." "These remarkable women designers from every corner of the nation offer insights into their struggle to achieve success, revealing their personal and professional philosophies. Photographs of some of their finest achievements are included in this colorful and groundbreaking volume that serves as a testament to the enormous achievements American women have made in this field during the past century."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Spiders are often underestimated as suitable behavioural models because of the general belief that due to their small brains their behaviour is innate and mostly invariable. Challenging this assumption,

---

this fascinating book shows that rather than having a limited behavioural repertoire, spiders show surprising cognitive abilities, changing their behaviour to suit their situational needs. The team of authors unravels the considerable intra-specific as well as intra-individual variability and plasticity in different behaviours ranging from foraging and web building to communication and courtship. An introductory chapter on spider biology, systematics and evolution provides the reader with the necessary background information to understand the discussed behaviours and helps to place them into an evolutionary context. Highlighting an under-explored area of behaviour, this book will provide new ideas for behavioural

researchers and students unfamiliar with spiders as well as a valuable resource for those already working in this intriguing field.
