[Staff-Less Libraries: Innovative Staff Design](#) considers the challenges of this approach, its pros and cons, identifies international experiences, and discusses best practices. It presents a step-by-step approach to implementing a staffless library and/or services, and seeks to inspire professionals to share experiences and optimize their library. Staff-less public libraries, enabled by technological developments, represent a significant and innovative aspect of the development of public libraries. The concept radically enlarges the availability of user access to public libraries. Some Danish public library branches have, for example, increased their weekly opening hours from 20 to 80 hours per week. In Denmark, the concept has been quite successful, increasing the number of staff-less libraries from 81 public library units in 2011 to 260 in 2014. From a longer view, however, the staff-less library concept contributes to the modernization of public libraries by further opening the library. Many library professionals have been surprised by the near absence of vandalism through the staffl-ess opening hours. According to the latest trend, the staffless library model is gradually moving from thinly populated rural areas and suburban neighborhoods to urban contexts. This book explores the concept, hence furthering the debate. Presents and considers the idea of staff-less libraries using evidence-based data Considers the challenges, pros, and cons of the staff-less library Identifies international experiences, best practices, and draws out a step-by-step approach to implementation

Advances in hardware and networking have made possible a wide use of augmented reality (AR) technologies. However, simply putting those hardware and technologies together does

not make a “good” system for end users to use. New design principles and evaluation methods specific to this emerging area are urgently needed to keep up with the advance in technologies. Human Factors in Augmented Reality Environments is the first book on human factors in AR, addressing issues related to design, development, evaluation and application of AR systems. Topics include surveys, case studies, evaluation methods and metrics, HCI theories and design principles, human factors and lessons learned and experience obtained from developing, deploying or evaluating AR systems. The contributors for this cutting-edge volume are well-established researchers from diverse disciplines including psychologists, artists, engineers and scientists. Human Factors in Augmented Reality Environments is designed for a professional audience composed of practitioners and researchers working in the field of AR and human-computer interaction. Advanced-level students in computer science and engineering will also find this book useful as a secondary text or reference.

<https://vimeo.com/124247409> This book provides a comprehensive critique of the current Creative City paradigm, with a capital 'C', and argues for a creative city with a small 'c' via a theoretical exploration of urban subversion. The book argues that the Creative City (with a capital 'C') is a systemic requirement of neoliberal capitalist urban development and part of the wider policy framework of 'creativity' that includes the creative industries and the creative class, and also has inequalities and injustices in-built. The book argues that the Creative City does stimulate creativity, but through a reaction to it, not as part of it. Creative City policies speak of having mechanisms to stimulate individual, collective or civic creativity, yet through a theoretical exploration of urban subversion, the book argues that to be 'truly' creative is to be radically different from those creative practices that the Creative City caters for. Moreover, the book analyses the role that urban subversion and subcultures have in the contemporary city in challenging the dominant political economic hegemony of urban creativity. Creative activities of people from cities all over the world are discussed and critically analysed to highlight how urban creativity has become co-opted for political and economic goals, but through a radical reconceptualisation of what creativity is that includes urban subversion, we can begin to realise a creative city (with a small 'c').

France 1961. Operation Ponctuelle: the name given to top level assassinations of Gaullist Ministers. Two men lie in wait in a basement garage underneath the Boulevard St. Germain for the Minister of Special Affairs, their aim to kidnap their target and use him as a bargaining chip in the internecine strife that is tearing France apart. All goes to plan until one of the men reveals his true nature. First the four bodyguards die, then the Minister, then his girlfriend, whose tip off made the operation possible. The other man looks on in horror as a monster is born, a killer more ruthless than all the other players in the deadly war. Soon the fragmented security services are on the look out for the assassin, codenamed Diderot. But in the boiler room paranoia all are fair game, as the police, the army and top secret Maurice Bureau rip each other apart in the search for Diderot. Only an Englishman holds the threads which will unravel the enigma that is Diderot. But for Harry Metcalfe, differing motives of love, friendship and revenge mean that the job in hand is a difficult one, and the chances of his survival in the balancing act even slimmer.; Gripping espionage thriller from the man hailed as the next Frederick Forsyth.

In Design for Services, Anna Meroni and Daniela Sangiorgi articulate what Design is doing and can do for services, and how this connects to existing fields of knowledge and practice. Designers previously saw their task as the conceptualisation, development and production of tangible objects. In the twenty-first century, a designer rarely 'designs something' but rather 'designs for something': in the case of this publication, for change, better experiences and better services. The authors reflect on this recent transformation in the practice, role and skills of designers, by organising their book into three main sections. The first section links Design for Services to existing models and studies on services and service innovation. Section two presents multiple service design projects to illustrate and clarify the issues, practices and theories that characterise the discipline today; using these case studies the authors propose a conceptual framework that maps and describes the role of designers in the service economy. The final section projects the discipline into the emerging paradigms of a new economy to initiate a reflection on its future development.

This book covers all the emerging trends in artificial intelligence (AI) and the Internet of Things (IoT). The Internet of Things is a term that has been introduced in recent years to define devices that are able to connect and transfer data to other devices via the Internet. While IoT and sensors have the ability to harness large volumes of data, AI can learn patterns in the data and quickly extract insights in order to automate tasks for a variety of business benefits. Machine learning, an AI technology, brings the ability to automatically identify patterns and detect anomalies in the data that smart sensors and devices generate, and it can have significant advantages over traditional business intelligence tools for analyzing IoT data, including being able to make operational predictions up to 20 times earlier and with greater accuracy than threshold-based monitoring systems. Further, other

AI technologies, such as speech recognition and computer vision can help extract insights from data that used to require human review. The powerful combination of AI and IoT technology is helping to avoid unplanned downtime, increase operating efficiency, enable new products and services, and enhance risk management.

This book is the first-ever authoritative work on the use and management of humor in the workplace. It is a practical guide for everyone involved: the humorists ('jokers'), the targets (sometimes 'victims'), the observers ('audience') and most of all the managers who have to 'set the tone' and encourage, control and manage humor. Humor is part and parcel of every workplace. However, while it usually demonstrates and fosters a united, happy workforce, it can at times be deeply damaging and divisive. The authors – academics with vast organizational experience and a research-based understanding of humor at work – bring together state-of-the art knowledge of the topic, making it fun, accessible and readable for all humor participants. The topics include how humor works, humor cultures in organizations, the many forms of workplace humor and their pros and cons, humor rituals at work, digital humor, workplace jokers, the 21st century issue of 'political correctness', and both the 'bright side' of humor (assisting positive cultures, making work 'fun'), and its 'dark side' (where humor offends and humiliates). With over 60 'real life' illustrative stories of workplace humor, a self-completion questionnaire to measure the Humor Climate in your organization, end-of-chapter 'takeaways' and an end-of-book summary advocating 'best practice', the book is a 'fun', how-to-do-it guide that will both inform and entertain.
