The 2nd edition has been updated in line with the latest developments in US law, including the new Americans with Disabilities Act.

Conservation Science and Advocacy for a Planet in Peril Transportation Research Board

This book includes papers published in the Special Issue titled “ Coastal Dynamic and Evolution ” , which aimed to collect multidisciplinary studies that involved the evaluation of coastal evolution at different temporal scales, from hours and days to months and years, as well as historical changes. The volume contains investigations carried out by means of aerial photos and satellite images, as well as results from in situ surveys and observations aimed at assessing morphological changes in shoreline and dune systems as a

consequence of chronic flooding and erosion processes or the occurrence of specific weather-related events. Studies on the evaluation of past and future sea-level variations and related impacts have also been included. In order to provide the reader with a wide overview of different coastal settings and methodological approaches, case studies from Russia, Italy, California (USA), Morocco, Spain, Indonesia, Ireland and Colombia have been included in this Special Issue. The content may be of interest to those who perform a wide range of investigations related to coastal analysis and management, especially to researchers and academics who can exploit the provided approaches and methodologies.

“Company town.” The words evoke images of rough-and-tumble loggers and gritty miners, of dreary shacks in isolated villages, of wages paid in scrip good only at price-gouging company stores of paternalistic employers. But these stereotypes are outdated, especially for those company towns that flourished well into the twentieth century. This new edition updates the status of the surviving towns and how they have changed in the fifteen years since the original edition, and what new life has been

created on the sites of the ones that were razed. In the preface, Linda Carlson reflects on how wonderful it has been to meet people who lived in these towns, or had parents who did, and to hear about their memorable experiences.

At Dwell, we're staging a minor revolution. We think that it's possible to live in a house or apartment by a bold modern architect, to own furniture and products that are exceptionally well designed, and still be a regular human being. We think that good design is an integral part of real life. And that real life has been conspicuous by its absence in most design and architecture magazines.

Electronic Business Elsevier

In this groundbreaking work, readers will discover a wealth of innovative and impactful advancements in the field of climate change. A call to action for those working to arrest or mitigate the impacts of this global crisis, this book showcases the tireless dedication of a workforce committed to creating a better world. Despite the despair and anger that often accompany discussions of climate change, this book offers a refreshing perspective by highlighting the moments of hope and pride that arise when individuals see their efforts have tangible, measurable impacts. Readers will also be inspired to learn that they don't have to be scientists or engineers to make a difference. The author illustrates how every person with an interest in protecting the

environment, the global food supply, and geopolitical stability can join the fight, whether by improving the efficiency of manufacturing operations or by contributing to the manufacture of life-saving medicines. This is a must-read for anyone who cares about the environment, our global community, and our collective future.

Science and Politics Routledge

This provocative volume offers an enlightening look at mental health consultation as a preventive service. To enhance the prospects of consultation being preventive, consultation is defined as an ecological enterprise. Although attention is given to outcomes, process is the key in this book. This beneficial volume presents ten valuable principles to guide the work of a consultant, plus case studies representing different topics--self-esteem of high school students in rural Oregon, child abuse prevention in a rural and urban setting in Iowa, a

junior high school consolidation in Maryland, and preventive services for Lutheran congregations in Minnesota. Each of the authors of the four case examples in their actual consultation and in their descriptions of their consultation have extended and elaborated what it means to think ecologically.

Following an unusual format, the comments from the recipients of the interventions described in the case studies have been included as a reminder that prevention, in its truest spirit, involves partnerships, that “subjects” or “consultees” have feelings and opinions about their participation, and that subjective data are as important as objective data.

Oversight on Rural Housing Programs MDPI

This book presents a collection of state-of-the-art approaches for deep-learning-based biomedical and health-related applications. The aim of healthcare informatics is to ensure high-quality, efficient health care, and better treatment and quality of life by efficiently analyzing abundant biomedical and healthcare data, including patient data and

electronic health records (EHRs), as well as lifestyle problems. In the past, it was common to have a domain expert to develop a model for biomedical or health care applications; however, recent advances in the representation of learning algorithms (deep learning techniques) make it possible to automatically recognize the patterns and represent the given data for the development of such model.

This book allows new researchers and practitioners working in the field to quickly understand the best-performing methods. It also enables them to compare different approaches and carry forward their research in an important area that has a direct impact on improving the human life and health. It is intended for researchers, academics, industry professionals, and those at technical institutes and R&D organizations, as well as students working in the fields of machine learning, deep learning, biomedical engineering, health informatics, and related fields.

Parenting in the Context of Opioid Use:

Mechanisms, Prevention Solutions, and Policy Implications CRC Press

The Metaverse and Smart Cities: Urban Environments in the Age of Digital Connectivity explores the intersection between the rapidly growing metaverse and the future of cities. The metaverse is a virtual world that is increasingly gaining attention as a new frontier for human interaction and commerce. At the same time, cities are undergoing significant transformation as they face challenges such as population growth, urbanization, and environmental degradation. Urban planners and city administrators will find valuable insights on how the metaverse can be integrated into the planning and development of smart, sustainable and

future cities. The book begins with an introduction to the concepts and technology of the metaverse as well as its history. It then sheds light on the current and future challenges and opportunities that the metaverse presents to cities and the quality of life of urban dwellers. It delves into the ways in which the metaverse can change cities, both in terms of their physical and virtual environments, and the impact it can have on the lives of those who live in them. It brings together the latest research and perspectives from experts in the fields of virtual reality, urban planning, and sustainability, to provide a comprehensive and up-to-date picture of this rapidly evolving field. The insights and recommendations presented in the book will

be valuable to policymakers, urban planners, and technology professionals interested in shaping the future of cities and the quality of life of those who live in them. Urban dwellers will gain an understanding of the potential impact of the metaverse on their quality of life, and technology enthusiasts and real estate developers will gain insights into the potential opportunities and challenges of investing in the metaverse and its connection to cities. Provides a comprehensive and in-depth examination of the relationship between the metaverse and cities, recognizing the role that virtual environments will play in shaping the future of urban life. Presents practical examples and case studies to demonstrate the possibilities and challenges of the metaverse in cities.

Includes the historical foundations necessary for understanding the current challenges and potential future trajectories of the technology.

Climate Champions

Conservation Science and Advocacy for a Planet in Peril: Speaking Truth to Power helps equip scientists working on environmental and sustainability challenges with new tactics for success. Global efforts and cooperation by member states of environmental conventions have steadily increased but lack efficient and scalable mechanisms of translating conservation science to policy. The gap between science and policy is growing and very little time remains before the climate change and biodiversity losses trigger widespread disruptions of the planet's life support systems. This book covers these

important topics, providing a must read for environmental and conservation scientists, climate change activists, students, social scientists, economic professionals, sustainable businesses and policymakers. Provides an unprecedented collection of local, regional, and national case studies from scientists and practitioners engaged in outreach to decision makers and the public Covers personal accounts that bring science into policymaking, providing usable guidelines for those working to bridge this gap Includes the requisite information needed for effective communications and campaign strategies by sharing lessons learned

Recent partisan squabbles over science in the news are indicative of a larger tendency for scientific research and practice to get entangled in major ideological divisions in the public

arena. This politicization of science is deepened by the key role government funding plays in scientific research and development, the market leading position of U.S.-based science and technology firms, and controversial U.S. exports (such as genetically modified foods or hormone-injected livestock). This groundbreaking, one-volume, A-to-Z reference features 120-150 entries that explore the nexus of politics and science, both in the United States and in U.S. interactions with other nations. The essays, each by experts in their fields, examine: Health, environmental, and social/cultural issues relating to science and politics Concerns relating to government regulation and its impact on the practice of science Key historical and contemporary events that have shaped our contemporary view of how science and politics intersect Science and Politics: An A to Z Guide

to Issues and Controversies is a must-have resource for researchers and students who seek to deepen their understanding of the connection between science and politics.

TRB's National Cooperative Highway Research Program (NCHRP) Synthesis 351 examines issues involved in acquiring access rights along roadways other than freeways. The report documents the state of the practice with the intent to limit the amount of access to the roadway for the purpose of managing highway safety and mobility. The report documents successful practices and current policies, legal and real estate literature, and other publications that address this subject.

Chemicals 26

The definitive work on the best ways to support the healthy development of children and adolescents and their families, based on 20 years of the groundbreaking TOPP Study The unique longitudinal study "Tracking Opportunities and Problems (TOPP)" began following nearly 1,000 children and their

families in Norway in 1993. Few studies have ever accumulated such extensive information from such a large number of families. Eight waves of data on many aspects of child and family life have been collected from children aged 18 months to 18 years. The TOPP Study has provided new knowledge about and insight into the precursors, developmental paths and predictors of both good adaptation and mental health problems of children, as well as into parenting and family relationships. The editors have collated the key findings in three parts. Part 1 addresses the mental health and development of children and adolescents. Part 2 focuses on parents, looking at individual parental and family-related factors, including parental couple relationships. Part 3 looks at the methodological issues, including the sample, response rate and measurement and analytical approaches. Each chapter reviews the existing knowledge in these areas in relation to the TOPP findings and provides extensive reference lists for those who want to dig deeper. This unique book provides thought-provoking insights into the TOPP findings to help guide therapeutic practice, to suggest new avenues of research, to inform teaching, and to shape policy planning and preventive actions. It is thus an invaluable resource for all professionals, researchers, educators, policy makers, and students working with children and adolescents and their families.
