Positive psychology is a branch of psychology that focuses on the positive aspects of human experience and behaviour, aiming to enhance well-being and promote flourishing. Traditional psychology has often focused on treating mental illness and dysfunction, whereas Positive psychology emerged to provide a more holistic understanding of human nature by studying positive emotions, strengths, and virtues. As societies progress, there is an increasing recognition that measuring progress solely through economic indicators is insufficient. Positive psychology addresses the need to enhance overall life satisfaction and happiness. Positive psychology aims to improve the quality of life by focusing on aspects such as happiness, life satisfaction, and the overall well-being of individuals and communities.
