As part of an emerging literature on place branding, this book fills the important gap between practice-oriented literature—which lacks in-depth and critical analysis—and technical academic literature—which tends to miss down-to-earth practitioners' concerns and to overlook policy and political contexts. Providing frameworks and knowledge on how to practice place branding effectively, this book anchors place-branding practices in a solid analytical framework. It presents place-branding practices through the lenses of public sector marketing, strategic management, and governance processes and structures, as well as communication tools. Marketing a place is more than creating a logo and a motto; this book presents the key strategic aspects to be considered when promoting a place. Readers will gain knowledge about the most important features of place promotion: the development of brands and marketing campaigns in the public sector, the establishment of dedicated politico-administrative structures, and the increasing involvement of various stakeholders that play a central role as place promoters. This book will be a valuable resource for researchers and postgraduate students across place branding, marketing and management, and urban studies, as well as public management, administration, and policy. The practical conclusions discussed in the book will also appeal to practitioners, business consultants, and people working in public administration and politics.

Chronic homelessness is a highly complex social problem of national importance. The problem has elicited a variety of societal and public policy responses over the years, concomitant with fluctuations in the economy and changes in the demographics of and attitudes toward poor and disenfranchised citizens. In recent decades, federal agencies, nonprofit organizations, and the philanthropic community have worked hard to develop and implement programs to solve the challenges of homelessness, and progress has been made. However, much more remains to be done.

Importantly, the results of various efforts, and especially the efforts to reduce homelessness among veterans in recent

years, have shown that the problem of homelessness can be successfully addressed. Although a number of programs have been developed to meet the needs of persons experiencing homelessness, this report focuses on one particular type of intervention: permanent supportive housing (PSH). Permanent Supportive Housing focuses on the impact of PSH on health care outcomes and its cost-effectiveness. The report also addresses policy and program barriers that affect the ability to bring the PSH and other housing models to scale to address housing and health care needs.

During the past decade, raising the productivity of women became an integral element of the World Bank's overall strategy for reducing poverty and achieving sustainable growth. The number and scope of Bank projects to provide women with enterprise development, financial services, and social intermediation services grew accordingly. This paper reviews 27 such projects in East and South Asia and provides a succinct assessment of successes, failures, and surprises. The authors identify patterns and trends in the design of projects, examine the reasons for such trends, and draw lessons about how such projects can be more effective in delivering financial services to women in these countries. Many of these women are an increasingly vital source--or the sole source--of income for their families, but they are often overlooked in the implementation of small development projects. The authors draw eight key lessons for future Bank projects to provide enterprise development and financial services. They recommend that such projects be considered one element of a coordinated country-specific strategy for poverty alleviation.

The healthcare landscape in the United States is evolving rapidly but has largely ignored EMS, until recently. As the country focuses on cost containment and more appropriate methods to deliver services as a result of healthcare reform, EMS will need to undergo dramatic change to fill a new role in the healthcare system. The current traditional delivery method for EMS is financially unsustainable and will soon not be a viable option for care. EMS has a choice to make--adapt to the new environment or be left behind. A viable alternative to the current structure of EMS is Mobile Integrated Healthcare (MIH)--community-based health management that is fully integrated with the overall health system. Various programs like this have appeared across the United States, but a definitive resource that describes how to successfully implement

such a program has not been available. *Mobile Integrated Healthcare: Approach to Implementation* fills this void by serving as a reference not only to the EMS community, but also to other medical professionals working toward implementation of a successful MIH program. *Mobile Integrated Healthcare: Approach to Implementation* provides a step-by-step approach for the identification of community needs, forming the appropriate partnerships, selection of staff, acquiring resources, patient identification, and overcoming hurdles to a successful program. Examples from successful programs across the country are included. The author team of *Mobile Integrated Healthcare: Approach to Implementation* has developed and implemented a functioning, successful program. Their experiences with community partners and other healthcare specialists provide a broad-based view of the future of EMS in the healthcare industry. *Mobile Integrated Healthcare: Approach to Implementation* is written by leaders in the field of EMS who are committed to guiding the successful evolution of EMS. Their approach to integration should be considered by EMS management, hospital-based social workers, and community partners such as county health authorities, homeless coalitions, and psychiatric services. The type of care EMS providers give needs to evolve with the changing landscape of healthcare. This text describes how healthcare professionals and community partners can work together to facilitate that change and define a successful MIH program.

"A clarifying must-read in these uncertain times. " —GOVERNOR ANDREW CUOMO Journey behind the front lines of the coronavirus pandemic with Northwell Health, New York ' s largest health system. What was it like at the epicenter, inside the health system that cared for more COVID-19 patients than any other in the United States? *Leading Through a Pandemic: The Inside Story of Lessons Learned about Innovation, Leadership, and Humanity During the COVID-19 Crisis* takes readers inside Northwell Health, New York ' s largest health system. From the C-suite to the front lines, the book reports on groundwork that positioned Northwell as uniquely prepared for the pandemic. Two decades ago, Northwell leaders began preparing for disasters—floods, hurricanes, blackouts, viruses, and more based on the belief that "bad things will happen and we have to be ready." Following a course highly unusual for an American health system, Northwell developed one of the most advanced non-government emergency response systems in the country. Northwell reached a point where leaders could confidently say "we are comfortable being uncomfortable in a crisis." But even with sustained preparation, the pandemic stands as a singularly humbling experience. *Leading Through a Pandemic* offers guidance on how hospitals and health systems throughout the country can prepare more effectively for the next viral threat. The book includes dramatic stories from the front lines at the peak of the viral assault and lessons of what went well, and what did not. The authors draw upon the Northwell experience to prescribe changes in the health care system for next time. Beyond the obvious need for increased stockpiles of supplies and equipment is the far more challenging task of fundamentally changing the culture of American health care to embrace a more robust emergency response capability in hospitals and systems of all sizes across the nation. The book is a must read for health care professionals, policy-makers, journalists, and readers whose curiosity demands a deeper dive into the surreal realm of the coronavirus pandemic.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and

containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Renewal for Men and Women In Their Thirties, Forties, Fifties and Beyond Do you lead or participate in a collective enterprise which has grown old before its time? Lagging corporations, family businesses, governmental entities and private foundations dampen the spirits and drain energy from managers, employees and volunteers top to bottom. The author's second book, *Wake Up Captain and Crew-Restart Your Engines* , addresses leaders, formal and informal, intent upon revitalizing their stagnant or declining organizations from within. The author begins from the premise that sagging enterprises are best transformed by reigniting the creative energies and collective spirit of those presently on board. No matter how outstanding its products or services, any organization's primary asset is the combined talent, knowledge and imagination of on-board personnel. Rather than attempting to tear down and rebuild, today's outstanding leaders are able to inspire colleagues, subordinates or fellow volunteers to anticipate and adapt to a radically different, continually evolving positive culture of innovation. The author presents a five-fold formula designed to restore positive momentum to lagging organizations large and small: 1) early diagnosis and treatment of the symptoms of decline, 2) identification and evaluation of collective strengths, traditions and resources upon which to build, 3) inspirational exercises intended to revitalize the personal lives and careers of on-board participants, 4) merging of individual and collective objectives into fully engaged circles of cooperation and 5) empowerment and reward for every dedicated and capable contributor. The author Roy Richards is a motivational speaker, Business consultant, personal coach and co-founder of the Middle Age Renewal Training Institute (MART.) His stated mission is to revitalize lagging businesses and not-for-profit enterprises across North America at the same time reenergizing on-board leaders, employees and volunteers. A Phi Beta Kappa graduate of Carleton College, Northfield, Minnesota with a Masters in Business Administration from the University of Chicago, the author writes from the unique perspective of a thirty-six year business career, including seventeen years climbing the corporate ladder with four major U. S. corporations followed by nineteen years as a successful small business owner and entrepreneur.

In the organizational context, the word "innovation" is often associated with private sector organizations, which are often perceived as more agile, adaptable, and able to withstand change than government agencies and nonprofit organizations. But the reality is that, while they may struggle, public and nonprofit organizations do innovate. These organizations must find ways to use shrinking resources effectively, improve their performance, and achieve desirable societal outcomes. Innovation in the Public Sector provides alternative frameworks for defining, categorizing, and studying innovation in government and in the nonprofit sector. Through a diverse collection of international case studies, this book broadens the discussion of innovation in public and nonprofit organizations, demonstrating the hurdles organizations face and examining the technological advances and managerial ingenuity innovators use to achieve their goals, both within and beyond the boundaries of the innovating organization. The chapters shed light on key issues including: how to conceptualize innovation; how organizations decide between competing good ideas; how to implement innovation; how to contend with challenges to innovation; how to judge success in innovation This book provides current and future public managers with the understanding and skills required to manage change and innovation, and is essential reading for all those studying public management, public administration, and public policy.

Indonesia has urbanized rapidly since its independence in 1945, profoundly changing its economic geography and giving rise to a diverse array of urban places. These places range from the bustling metropolis of Jakarta to rapidly emerging urban centers in hitherto largely rural parts of the country. Although urbanization has produced considerable benefits for many Indonesians, its potential has only been partially realized. *Time to ACT: Realizing Indonesia's Urban Potential* explores the extent to which urbanization in Indonesia has delivered in terms of prosperity, inclusiveness, and livability. The report takes a broad view of urbanization's performance in these three key areas, covering both the monetary and nonmonetary aspects of welfare. It analyzes the fundamental reforms that can help the country to more fully achieve widespread and sustainable benefits, and it introduces a new policy framework—the ACT framework—to guide policy making. This framework emphasizes the three policy principles of Augment, Connect, and Target:

- Augment the provision and quality of infrastructure and basic services across urban and rural locations
- Connect places and people to jobs and opportunities and services
- Target lagging areas and marginalized groups through well-designed place-based policies, as well as thoughtful urban planning and design.

Using this framework, the report provides policy recommendations differentiated by four types of place that differ in both their economic characteristics and the challenges that they face—multidistrict metro areas, single-district metro areas, nonmetro urban areas, and nonmetro rural areas. In addition to its eight chapters, *Time to ACT: Realizing Indonesia's Urban Potential* includes four spotlights on strengthening the disaster resilience of Indonesian cities, the nexus between urbanization and human capital, the “invisible” crisis of wastewater management, and the potential for smart cities in Indonesia. If Indonesia continues to urbanize in line with global historical standards, more than 70 percent of its population will be living in towns and cities by the time the country celebrates the centenary of its independence in 2045. Accordingly, how Indonesia manages this

continued expansion of its urban population—and the mounting congestion forces that expansion brings—will do much to determine whether the country reaches the upper rungs of the global ladder of prosperity, inclusiveness, and livability.

Rural counties make up about 80 percent of the land area of the United States, but they contain less than 20 percent of the U.S. population. The relative sparseness of the population in rural areas is one of many factors that influence the health and well-being of rural Americans. Rural areas have histories, economies, and cultures that differ from those of cities and from one rural area to another. Understanding these differences is critical to taking steps to improve health and well-being in rural areas and to reduce health disparities among rural populations. To explore the impacts of economic, demographic, and social issues in rural communities and to learn about asset-based approaches to addressing the associated challenges, the National Academies of Sciences, Engineering, and Medicine held a workshop on June 13, 2017. This publication summarizes the presentations and discussions from the workshop.
