Cochran-Smith and her research team argue that it is time for teacher educators to reclaim accountability. They critique major accountability initiatives, exposing the lack of evidence behind these policies and the negative impact they have on teacher education. They also offer an achievable alternative based on a commitment to equity and democracy.

#1 NEW YORK TIMES BESTSELLER • A special 20th anniversary edition of the beloved book that changed millions of lives—with a new afterword by the author
Maybe it was a grandparent, or a teacher, or a colleague. Someone older, patient and wise, who understood you when you were

young and searching, helped you see the world as a more profound place, gave you sound advice to help you make your way through it. For Mitch Albom, that person was Morrie Schwartz, his college professor from nearly twenty years ago. Maybe, like Mitch, you lost track of this mentor as you made your way, and the insights faded, and the world seemed colder. Wouldn't you like to see that person again, ask the bigger questions that still haunt you, receive wisdom for your busy life today the way you once did when you were younger? Mitch Albom had that second chance. He rediscovered Morrie in the last months of the older man's life. Knowing he was dying, Morrie visited with Mitch in his study every Tuesday, just as they used to back in college. Their rekindled relationship turned

into one final "class": lessons in how to live. Tuesdays with Morrie is a magical chronicle of their time together, through which Mitch shares Morrie's lasting gift with the world.

Create strong and effective PLCs plus—and that plus is YOU What makes a powerful and results-driven Professional Learning Community (PLC)? The answer is PLC plus— "plus" being the vital role teachers play in teaching and learning. Grounded in four cross-cutting themes—equity, high expectations, efficacy, and facilitation from discussion to action—the PLC+ framework supports educators in questioning

practices, not just outcomes. It broadens the focus on student learning to encompass educational equity and teaching efficacy, and, in doing so, it leads educators to plan and implement PLCs that maximize individual expertise while harnessing the power of collaborative efficacy.

U.S. History is designed to meet the scope and sequence requirements of most courses. The authors introduce key forces and major developments that together form the American experience, with particular attention paid to considering issues of race, class

and gender. The text provides a balanced approach to U.S. history, considering the people, events and ideas that have shaped the United States from both the top down (politics, economics, diplomacy) and bottom up (eyewitness accounts, lived experience).

An Old Man, a Young Man, and Life's Greatest Lesson, 20th Anniversary Edition Brooks/Cole Publishing Company

Higher education is a strange beast. Teaching is a critical skill for scientists in academia, yet one that is barely touched upon in their professional training—despite being a substantial part of their career. This book is a

practical guide for anyone teaching STEM-related academic disciplines at the college level, from graduate students teaching lab sections and newly appointed faculty to well-seasoned professors in want of fresh ideas. Terry McGlynn's straightforward, no-nonsense approach avoids off-putting pedagogical jargon and enables instructors to become true ambassadors for science. For years, McGlynn has been addressing the need for practical and accessible advice for college science teachers through his popular blog Small Pond Science. Now he has

gathered this advice as an easy read—one that can be ingested and put to use on short deadline. Readers will learn about topics ranging from creating a syllabus and developing grading rubrics to mastering learning management systems and ensuring safety during lab and fieldwork. The book also offers advice on cultivating productive relationships with students, teaching assistants, and colleagues.

Topical coverage is combined with the author's lively, conversational writing style, innovative features, the direct and clear manner of presentation, and the emphasis on problem solving and practical applications.

Part 1: Chapters 1-17 Cengage Learning

In high school, everyone's talking about college. What to do. Where to go. Why it's important. Classes are given on it. Books are written about it. But details get left out. Every year, college graduates learn this the hard way as they step into adulthood. I was one of them. After earning a four-year degree, I went through two of the worst years of my life. Not that my situation is unique. I am a part of a generation that was told to go to college first and sort out the details later. Most of us did. We chased the promise of a big shiny future, and we ended up being chased by

the mistakes of our past. That's not to say we completely regretted going. This book isn't a list of privileged millennial complaints. It's a collection of wisdom gained in less than pleasant ways. It's a story of hardship, failure, victory, and perseverance. It's all of the things we wish someone had told us. And it takes place before college, in college, after college, and without college. This is the wild, painful, awkward, hilarious, depressing, & beautiful journey from youth to maturity. This is the college book that no one ever gave us. On Course Harvard University

Concepts of Biology

University of Chicago Press

Textbooks are symbols of centuries-old education.

They're often outdated as soon as they hit students' desks. Acting "by the textbook" implies compliance and a lack of creativity.

It's time to ditch those textbooks--and those textbook assumptions about learning In

Ditch That Textbook, teacher and blogger Matt Miller encourages educators to throw out meaningless, pedestrian teaching and learning practices. He empowers them to evolve and improve on old, standard, teaching methods. Ditch That Textbook is a support system, toolbox, and manifesto to help educators free their teaching and revolutionize their classrooms.

Teaching What Really Happened

The Ancillary Army. Freeway Flyers. Roads Scholars. Turnpike Teachers. These are some of the nicknames given to part-time college teachers. They may teach one or two courses at a single institution, or, in some cases, they may teach multiple courses at multiple institutions. Often their "office" consists of the front seat of their car, and

their "desk" is a cardboard box. Their lunch is whatever they can grab at McDonalds while zipping through traffic to their next scheduled class. For many, the thought of teaching one or two courses in their area of specialty is most appealing. Not only does it offer an opportunity to share some basic information about a specific occupational field; so too, does it provide a chance to stay up-to-date on current trends in business, psychology, education, computer science or whatever one's field may be. It's also

a nice way to supplement one's income and work with a new generation of students. But, for many adjunct instructors, often hired just before a semester begins and usually without any pedagogical training, there's a constant question that always surfaces: What do I need to know in order to teach college students successfully? This is a query asked by more than 700,000 adjunct professors in over 4,200 institutions of higher education - a number that represents approximately 75.5% of all college faculty.

The reason why so many adjunct-to-earth answers to instructors ask that question instructors' often unanswered is because, not only do they questions. Better Decisions and Greater Impact by Design Corwin Press

Winner of the Virginia and Warren Stone Prize awarded annually by Harvard University Press for an outstanding book on education and society What makes a great teacher great? Who are the professors students remember long after graduation? This book, the conclusion of a fifteen-year study of nearly one hundred college teachers in a wide variety of fields and universities, offers valuable answers for all educators. The short answer is—it's not what teachers do, it's what they understand. Lesson plans and

lecture notes matter less than the special way teachers comprehend the subject and value human learning. Whether historians or physicists, in El Paso or St. Paul, the best teachers know their subjects inside and out—but they also know how to engage and challenge students and to provoke impassioned responses. Most of all, they believe two things fervently: that teaching matters and that students can learn.
