A powerful account of how cultural anxieties about race shaped American notions of mental illness The civil rights era is largely remembered as a time of sit-ins, boycotts, and riots. But a very different civil rights history evolved at the Ionia State Hospital for the Criminally Insane in Ionia, Michigan. In The Protest Psychosis, psychiatrist and cultural critic Jonathan Metzl tells the shocking story of how schizophrenia became the diagnostic term overwhelmingly applied to African American protesters at Ionia—for political reasons as well as clinical ones.

Expertly sifting through a vast array of cultural

documents, Metzl shows how associations between schizophrenia and blackness emerged during the tumultuous decades of the 1960s and 1970s—and he provides a cautionary tale of how anxieties about race continue to impact doctor-patient interactions in our seemingly postracial America. This book was published with two different covers. Customers will be shipped the book with one of the two covers.

The care home sector is large, with over 400 000 residents in the UK and a similar number employed within the homes. It is therefore an area of considerable economic importance. Care home residents are often very old, and many have multiple physical and mental health needs, meaning that their care poses particular challenges. They are also a distinctly and profoundly marginalised group who are often invisible in the wider debates on quality of care including those about care homes. *Mental Health and Care Homes* is a coherent and evidence-based text exploring these issues. Bringing together both clinical and research perspectives it will help those working in the care home sector to deliver high quality care and support to both residents and staff. This important, yet neglected, area is thoroughly reviewed by a range of experts including residents, family carers, staff, researchers, and clinicians. The book has four sections: 'the inside view' which includes several first-hand accounts of care home life; 'the outside view' which discusses the regulatory, funding, and legislative context in which care homes operate; 'mental health and care', a detailed review of the major mental and other health issues that arise in care homes,

as well as interventions and services to offer support; and a section exploring the 'promotion of health and wellbeing' including examples of good practice. It concludes by synthesising key themes and setting an agenda for further enquiry. The book is written in a style that encourages engagement, with the inclusion of contemporary case studies and examples, making it topical and readable. It will be valuable for a broad professional and vocational audience across both health and social care, as well as students and researchers.

Contributors to this volume present and discuss new data which suggest that major mental disorder substantially increases the risk of violent crime. These findings come at a crucial time, since those who suffer from mental disorders are increasingly living in the community, rather than in institutions. The book describes the magnitude and complexity of the problem and offers hope that humane, effective

intervention can prevent violent crime being committed by the seriously mentally disordered.

This book is a guide for three groups of people: the psychologists and social workers who send clients to psychiatrists; the psychiatrists who prescribe the drugs; and the clients who are often caught in the middle. A guiding principle is that collaboration, rather than coercion, is most likely to promote, achieve, and sustain recovery. Diamond and Scheifler discuss the often-competing agendas of these groups of people: "what does everyone want out of this relationship" and "how can we make these relationships easier and more beneficial for the client?" The book will also speak to each group of readers, explaining how they can participate more effectively in the process. For example, what questions should a therapist be asking of the psychiatrist; how is the best way to communicate? What is the best way to forge a strong relationship? What should the consumer do to make sure that she is getting the best treatment? Important topics addressed include: how to set goals with clients so that everyone is on the same page with the treatment regimen; how to manage inevitable conflicts that will arise; helping clients deal with medication side effects; working with clients to choose when medication is changed; how to focus on recovery as a goal and not just medication management.

The New York Times bestseller "A glistening psychological history, faceted largely by the biographies of eight famous leaders . . ." —The Boston Globe "A provocative thesis . . . Ghaemi's book deserves high marks for original thinking." —The Washington Post "Provocative, fascinating." —Salon.com Historians have long puzzled over the apparent mental instability of great and terrible leaders alike: Napoleon, Lincoln, Churchill, Hitler, and others. In *A First-Rate Madness*, Nassir Ghaemi, director of the Mood Disorders Program at Tufts Medical Center, offers a myth-shattering exploration of the powerful connections between mental illness and leadership and sets forth a controversial, compelling thesis: The very qualities that mark those with mood disorders also make for the best leaders in times of crisis. From the importance of Lincoln's "depressive realism" to the lackluster leadership of exceedingly sane men as Neville Chamberlain, *A First-Rate Madness* overturns many of our most cherished perceptions about greatness and the mind.

How does a parent make sense of a child's severe mental illness? How does a father meet the daily challenges of caring for his gifted but delusional son, while seeking to overcome the stigma of madness and the limits of psychiatry? W. J. T. Mitchell's memoir tells the story—at once representative and unique—of one family's encounter with mental illness and bears witness to the life of the

talented young man who was his son. Gabriel Mitchell was diagnosed with schizophrenia at age twenty-one and died by suicide eighteen years later. He left behind a remarkable archive of creative work and a father determined to honor his son's attempts to conquer his own illness. Before his death, Gabe had been working on a film that would show madness from inside and out, as media stereotype and spectacle, symptom and stigma, malady and minority status, disability and gateway to insight. He was convinced that madness is an extreme form of subjective experience that we all endure at some point in our lives, whether in moments of ecstasy or melancholy, or in the enduring trauma of a broken heart. Gabe's declared ambition was to transform schizophrenia from a death sentence to a learning experience, and madness from a curse to a critical perspective. Shot through with love and pain, *Mental Traveler* shows how Gabe drew his father into his quest for enlightenment within madness. It is a book that will touch anyone struggling to cope with mental illness, and especially for parents and caregivers of those caught in its grasp.

Traditional approaches to vocational rehabilitation, such as skills training classes, job clubs, and sheltered employment, have not been successful in helping people with severe mental illness gain competitive employment. Supported employment, in which clients are placed in jobs and then trained by on-site coaches, is a radically new conceptual approach to vocational rehabilitation designed for people with developmental disabilities. The Individual Placement and Support (IPS) method utilizes the supported employment concept, but modifies it for use with the severely mentally ill. It is the only approach that has a strong empirical research base: rates of competitive employment are 40% or more in IPS programs, compared to 15% in traditional mental health programs. The third volume in the

Innovations in Practice and Service Delivery with Vulnerable Populations series, this will be extremely useful to students in psychiatric rehabilitation programs and social work classes dealing with the severely mentally ill, as well as to practitioners in the field.
