Database Systems Longman Publishing Group divThe Internet has changed our social spaces,

our political and social realities, our use of language, and the way we communicate, all with breathtaking speed. Almost everyone who deals with the Internet and the new world of cyberspace communication at times feels bewildered, dismayed, or even infuriated. In this clear and helpful book, computer communications scholar Laura J. Gurak takes a close look at the critical issues of online communication and discusses how to become literate in the new mass medium of our era. In cyberspace, Gurak shows us, literacy means much more than knowing how to read. Cyberliteracy means being able to sort fact from fiction, to detect extremism from reasonable debate, and to identify gender bias, commercialism, imitation, parody, and other aspects of written language that are problematic in online communication. Active reading skills are essential in cyberspace, where hoaxes abound, advertising masquerades as product information, privacy is often compromised, and web pages and e-mail messages distort the truth. Gurak analyzes the new language of the Internet, explaining how to prepare for its discourse and protect oneself from its hazards. This book will appeal to anyone with an interest in the impact of the Internet on the practices of reading and writing and on our culture in general./DIV

The Reader encourages students to explore significant topics that impact their lives and have shaped the wider culture around them. Classic, timeless readings underscore the staying power of each topic (including identity; marriage and family; faith and religion; language; education; work; wealth and property; popular culture; and war, terrorism, and protest) but are complicated by current issues, contemporary perspectives, and varied genres that offer new opportunities for critique and exploration. The Reader draws on research that connects reading and writing in order to help students practice literacy strategies that broaden and strengthen their reading, writing, and researching skills. Three rhetoric chapters explain how the problem-posing, problem-solving aspects of college-level inquiry require that students engage texts and the research that

informs them using a process of thoughtful questioning-and that students bring this questioning methodology to their own processes of inventing, researching, drafting, and revising.
