The CFTR chloride channel is one of the most well studied transport proteins in biology. Yet there remain many mysteries about the functional properties and biological roles of this ABC transporter. The Cystic Fibrosis Transmembrane Conductance Regulator addresses a select series of 'hot' topics that relate to the function of CFTR, and the links between CFTR dysfunction and human disease (i.e., cystic fibrosis). The timeliness of these topics distinguishes this collection from previous volumes of this type. Given the general interest in CFTR, this collection will appeal to a broad readership with interests in CFTR, cystic fibrosis, ion channels and ABC transporters.

–Bustle FORMER TEACHER HAD MOTIVE. Recently suspended for a so-called outburst, high school English teacher Anna Crawford is stewing over the injustice at home when she is shocked to see herself named on television as a suspect in a shooting at the school where she works. Though she is quickly exonerated, and the actual teenage murderer identified, her life is nevertheless held up for relentless scrutiny and judgment as this quiet town descends into media mania. Gun sales skyrocket, victims are transformed into martyrs, and the rules of public mourning are ruthlessly enforced. Anna decides to wholeheartedly reject the culpability she's somehow been assigned, and the rampant sexism that comes with it, both in person and online. A piercing feminist howl written in trenchant prose, *How to Be Safe* is a compulsively readable, darkly funny exposé of the hypocrisy that ensues when illusions of peace are shattered.

This book includes impactful chapters which present scientific concepts, frameworks, architectures and ideas on sensing technologies and machine learning techniques. These are relevant in tackling the following challenges: (i) the field readiness and use of intrusive sensor systems and devices for capturing biosignals, including EEG sensor systems, ECG sensor systems and electrodermal activity sensor systems; (ii) the quality assessment and management of sensor data; (iii) data preprocessing, noise filtering and calibration concepts for biosignals; (iv) the field readiness and use of nonintrusive sensor technologies, including visual sensors, acoustic sensors, vibration sensors and piezoelectric sensors; (v) emotion recognition using mobile phones and smartwatches; (vi) body area sensor networks for emotion and stress studies; (vii) the use of experimental datasets in emotion recognition, including dataset generation principles and concepts, quality insurance and emotion elicitation material and concepts; (viii) machine learning techniques for robust emotion recognition, including graphical models, neural network methods, deep learning methods, statistical learning and multivariate empirical mode decomposition; (ix) subject-independent emotion and stress recognition concepts and systems, including facial expression-based systems, speech-based systems, EEG-based systems, ECG-based systems, electrodermal activity-based systems, multimodal recognition systems and sensor fusion concepts and (x) emotion and stress estimation and forecasting from a nonlinear dynamical system perspective. This book, emerging from the Special Issue of the Sensors journal on "Emotion and Stress Recognition Related Sensors and Machine Learning Technologies" emerges as a result of the crucial need for massive deployment of intelligent sociotechnical systems. Such technologies are being applied in assistive systems in different domains and parts of the world to address challenges that could not be addressed without the advances made in these technologies.

The advent of Internet of Things offers a scalable and seamless connection of physical objects, including human beings and devices. This, along with artificial intelligence, has moved transportation towards becoming intelligent transportation. This book is a collection of eleven articles that have served as examples of the success of internet of things and artificial intelligence deployment in transportation research. Topics include collision avoidance for surface ships, indoor localization, vehicle authentication, traffic signal control, path-planning of unmanned ships, driver drowsiness and stress detection, vehicle density estimation, maritime vessel flow forecast, and vehicle license plate recognition. High-performance computing services have become more affordable in recent years, which triggered the adoption of deep-learning-based approaches to increase the performance standards of artificial intelligence models.

Nevertheless, it has been pointed out by various researchers that traditional shallow-learning-based approaches usually have an advantage in applications with small datasets. The book can provide information to government officials, researchers, and practitioners. In each article, the authors have summarized the limitations of existing works and offered valuable information on future research directions.

Cooperative connected and automated mobility (CCAM) has the potential to reshape the transportation ecosystem in a revolutionary way. Transportation systems will be safer, more efficient and more comfortable. Cars are going to be the third living space, as passengers will have the freedom to use their car to live, work and travel. Despite the massive effort devoted, both by academia and industry, to developing connected and automated vehicles, there are still many issues to be addressed, including not only scientific and technological, but also regulatory and political issues. This book, mostly centered on the scientific and technological aspects of CCAMs, features seven articles highlighting recent advances of the state of the art in different CCAM technologies. Two papers address vehicular platooning, a key application for day-1 automated driving, other presents a scheme to improve the resource utilization of vehicular networks, while another paper addresses critical train communications, proposing an architecture based on 5G, SDN and MPTCP to provide path diversity and end-to-end redundancy. One paper describes the status of roadside deployment activities and analyzes the policies and practices of cooperative driving in the European Union. Finally, two review papers, one on congestion control techniques for VANETs and the other on fault tolerance techniques for vehicular networks, conclude the book.

Inborn Disorders of Sphingolipid Metabolism is a collection of papers presented at the Third International Symposium on the Cerebral Sphingolipidoses and Allied Diseases, held at the Isaac Albert Research Institute of the Jewish Chronic Disease Hospital and at the State University of New York, Downstate Medical Center, on October 25 and 26, 1965. This book is organized into three parts encompassing

35 chapters. Part I deals first with electron microscopic, histochemical, and morphological investigations of certain sphingolipid metabolism disorders. This part also examines several case reports on the features and symptoms of spongy degeneration of the central nervous system, familial leukodystrophy, adrenal insufficiency, and cutaneous melanosis. Part II surveys the metabolism, biosynthesis, and structure of gangliosides and sialic acids. This part also considers the nature of the lipophilic portions of the brain gangliosides. This part particularly looks into the features and clinical manifestation of Tay-Sachs disease. The third part covers the genetic and clinical aspects of the Tay-Sachs disease. This part also evaluates the genetics of the Hurler-Hunter syndrome, Batten-Spielmeier-Vogt disease, and lipogranulomatosis syndrome. This book is of value to biochemists, histochemists, geneticists, and researchers in the allied fields of lipidosis.

You might be extremely knowledgeable about the software that you use, have a good understanding of your own genre, and even have a good basic understanding of music theory. However, this does not necessarily mean that you can write effective music tracks. You need another kind of knowledge as well – the knowledge of composition. This friendly guide explains the basics of composing songs and music on the computer using any music using any music creation and recording program, whether you choose Reason, Live, Cubase, Logic, Pro Tools, Digital Performer, Finale, Sibelius, FL Studio, SONAR, or anything else. It's not as hard as it sounds, and this book eases the learning curve so you'll be making music in no time. You'll quickly learn how to program rhythm and drums, create basslines and melodic leads, and use FX and samples. You'll also learn about mixing and mastering your track and distributing it to a mass audience. *Composition for Computer Musicians* explains it all while showing you the basics of music theory throughout so you'll be sure you're not just making noise on the computer – you're using your computer to make professional-sounding music.

Timothy Cheek's revised edition of *Singing in Czech: A Guide to Czech Lyric Diction and Vocal Repertoire*, with its accompanying audio accessible online, builds on the original pioneering work of 2001 that set "a new and very welcome high standard for teaching lyric diction," according to *Notes: The Journal of the Music Library Association*. It offers users updated information, important clarifications, and expanded repertoire in a more accessible, easier to use format. *Singing in Czech* is divided into two parts. Using IPA, the first part takes the reader systematically through each sound of the Czech language, enhanced by recordings of native Czech opera singers. Chapters cover the Czech vowels, consonants, rules of assimilation, approaches to singing double consonants, stress and length, Moravian dialect, and an introduction to singing in Slovak. Fine points of formal pronunciation have been clarified in this revised edition. In the second part, Cheek offers a thorough overview of Czech art song, expanded from the first edition. Texts to major song literature and opera excerpts by Smetana, Dvořák, Janáček, Martin?, and Haas, with timings, editions, word-for-word translations, idiomatic translations, and IPA transcriptions follow. In this revision, Cheek has included additional cycles by Dvořák and Martin?, and two new chapters on Czech female composers Vítězslava Kaprálová and Sylvie Bodorová. This revised edition of *Singing in Czech* is useful for all those who are interested and engaged in the performance of the rich Czech vocal repertoire.

A literary tour de force from the acclaimed author of *The Blessings*—a riveting new novel about one of the most urgent crises of our time. One August afternoon, as single mother Maggie Daley prepares to send her only child off to college, their world is shattered by news of a mass shooting at the local mall in rural Maine. As reports and updates about the tragedy begin to roll in, Maggie, an English professor, is further stunned to learn that the gunman had been a student of hers: Nathan Dugan was an awkward, complicated young man whose quiet presence in her classroom had faded from her memory—but not, it seems, the memories of his classmates. When a viral blog post hints at the existence of a dark, violence-tinged essay Nathan had written during Maggie's freshman comp seminar, Maggie soon finds herself at the center of a heated national controversy. Could the overlooked essay have offered critical red flags that might have warned of, or even prevented, the murders to come? As the media storm grows around her, Maggie makes a series of desperate choices that threaten to destroy not just the personal and professional lives she's worked so hard to build, but—more important—the happiness and safety of her sensitive daughter, Anna. Engrossing and provocative, combining sharp plot twists with Juska's award-winning, trademark literary sophistication, *IF WE HAD KNOWN* is at once an unforgettable mother-daughter journey, an exquisite portrait of a community in turmoil, and a harrowing examination of ethical and moral responsibility in a dangerously interconnected digital world.
