Derrida wrote a vast number of texts for particular events across the world, as well as a series of works that portray him as a voyager. As an Algerian émigré, a postcolonial outsider, and an idiomatic writer who felt tied to a language that was not his own, and as a figure obsessed by the singularity of the literary or philosophical event,

Derrida emerges as one whose thought always arrives on occasion. But how are we to understand the event in Derrida? Is there a risk that such stories of Derrida's work tend to misunderstand the essential unpredictability at work in the conditions of his thought? And how are we to reconcile the importance in Derrida of the unknowable event, the pull of the singular, with deconstruction's critical and philosophical rigour and its claims to rethink more systematically the ethico-political field. This book argues that this negotiation in fact allows deconstruction to reformulate the very questions that we associate with ethical and political responsibility and shows this to be the central interest in Derrida's work.

Discover BIM: A better way to build better  
buildings Building Information Modeling  
(BIM) offers a novel approach to design,  
construction, and facility management in  
which a digital representation of the  
building product and process is used to  
facilitate the exchange and interoperability  
of information in digital format. BIM is  
beginning to change the way buildings look,  
the way they function, and the ways in which  
they are designed and built. The BIM  
Handbook, Third Edition provides an in-depth  
understanding of BIM technologies, the  
business and organizational issues  
associated with its implementation, and the

profound advantages that effective use of BIM  
can provide to all members of a project  
team. Updates to this edition include:  
Information on the ways in which  
professionals should use BIM to gain maximum  
value New topics such as collaborative  
working, national and major construction  
clients, BIM standards and guides A  
discussion on how various professional roles  
have expanded through the widespread use and  
the new avenues of BIM practices and  
services A wealth of new case studies that  
clearly illustrate exactly how BIM is  
applied in a wide variety of conditions  
Painting a colorful and thorough picture of  
the state of the art in building information  
modeling, the BIM Handbook, Third Edition  
guides readers to successful  
implementations, helping them to avoid  
needless frustration and costs and take full  
advantage of this paradigm-shifting approach  
to construct better buildings that consume  
fewer materials and require less time,  
labor, and capital resources.

This book examines the contributions of the transhumanism approach to technology, in particular the contributed chapters are wary of the implications of this popular idea. The volume is organized into four parts concerning philosophical, military, technological and sociological aspects of transhumanism, but the reader is free to choose various reading patterns. Topics discussed include gene editing, the singularity, ethical machines, metaphors in AI, mind uploading, and the philosophy of art, and some perspectives taken or discussed examine transhumanism within the context of the philosophy of technology, transhumanism as a derailed anthropology, and critical sociological aspects that consider transhumanism in the context of topical concerns such as whiteness, maleness, and masculinity. The book will be of value to researchers engaged with artificial intelligence, and the ethical, societal, and philosophical impacts of science and technology.

The corrosion of reinforcing steel in concrete is a major problem facing civil engineers and surveyors throughout the world today. There will always be a need to build structures in corrosive environments and it

is therefore essential to address the problems that result. *Corrosion of Steel in Concrete* provides information on corrosion of steel in at

Springer Nature

This book contains revised selected papers from the Second International Conference on Information Technologies for Performing Arts, Media Access and Entertainment, ECLAP 2013, held in Porto, Portugal, in April 2013. The 24 papers presented were carefully reviewed and selected for inclusion in this book. They are organized in topical sections named: perspectives and (digital) strategies for cultural heritage institutions; trust, quality and tools for cultural heritage digital libraries; educational services for the performing arts; dance in the world of data and objects; acting and natural interaction; and music and opera of a digital generation.

We delegate more and more decisions and tasks to artificial agents, machine-learning mechanisms, and algorithmic procedures or, in other words, to computational systems. Not that we are driven by powerful ambitions of colonizing the Moon,

replacing humans with legions of androids, creating sci-fi scenarios à la Matrix or masterminding some sort of Person of Interest-like Machine. No, the current digital revolution based on computational power is chiefly an everyday revolution. It is therefore that much more profound, unnoticed and widespread, for it affects our customary habits and routines and alters the very texture of our day-to-day lives. This opens a precise line of inquiry, which constitutes the basic thesis of the present text: our computational power is exercised by trying to adapt not just the world but also our representation of reality to how computationally based ICTs work. The impact of this technology is such that it does not leave things as they are: it changes the nature of agents, habits, objects and institutions and hence it subverts the existing order, without necessarily generating a new one. I argue that this power is often not distributed in an egalitarian manner but, on the contrary, is likely to result in concentrations of wealth, in dominant positions or in unjust competitive advantages. This opens up a struggle, with respect to which the task of reaffirming the fundamental values, the guiding principles, the priorities and the rules of the game, which can transform, or attempt to transform, a fierce confrontation between enemies in a fair competition between opponents rests on us.
