Bringing together an interdisciplinary team from across the EU, this book connects elements of cultural and planning

theories to explain differences and peculiarities among EU member states. A 'culturized planning model' is introduced to consider the 'rules of the game': how culture affects planning practices not only on an explicit 'surface' but also on a 'hidden' implicit level. The model consists of three analytical dimensions: 'planning artifacts', 'planning

---

environment' and 'societal environment'. This book adopts these dimensions to compare planning cultures of different European countries. This sheds light not only on the organizational or institutional structure of planning, but also the influence of deeper cultural values and layers on planning and implementation processes. INTRODUCTIO  
N Swimming is one of the compulsory courses in the joint honours study programme "Physical Education and Coaching" at both Bachelor and Master degrees. The aim of the Swimming 1 course is to learn and practice the correct technique of the front crawl stroke and breaststroke and to master basic starts and turns of these swimming techniques. The main criteria required to obtain credits for completing this subject include mastering the correct technique as well as swimming

50 metres front crawl and 100 metres breaststroke in given time limits. Monitoring of swimming competence in pupils at elementary schools, students at secondary schools and university students provides us with information on the actual efficiency of teaching swimming. Application requirements for students of physical education and sport continually keep getting less strict. Future students can pursue their admission process even if they do not score any points in swimming. It is sufficient if they can swim 100 m

---

swimming stroke without a pause. New students often enter the compulsory course "Swimming" with incorrect movement habits and wrong swimming technique. In such cases, the correction of errors is difficult and their elimination during the course is not always successful. Constant decrease of performance level and the quality of swimming technique of applicants have been researched by numerous university teachers (Bence, 2010; Bence – Mandz á kov á , 2006; Chebe , 2010; Kale í k – Ben ú rikov á , 2011; Macejkov á , 1996). Mandz á k, 2010, Mandz á kov á , 2012; Popelka, 2010 and Tonhauserov á – Mandz á k, 2010 observed the swimming technique of university students in the long run. Swimming technique assessment in terms of quality and efficiency of stroke execution and swimming performance provides us with feedback on efficiency of education. Identifying the most common errors in students ' technique can provide a better understanding of the causes of error adoption and within teaching apply appropriate exercises to correct identified deficiencies. Our study is focused on the front crawl stroke. At the beginning of the research we used diagnostic methods to identify the level of mastering the swimming techniques by students in their first year of university studies. At first, the students took a one – semester course "Swimming 1", and then they took a selective course focused on the improvement of their swimming techniques. Corrective swimming programme

---

constituted a part of both courses. The traditional course was enriched by a system of effective exercises aimed at the correction of the wrong technique. During the output testing, we determined the effectiveness of this programme in terms of changes in quality indicators of the front crawl technique. Apart from the main objective, we also partially aimed at determining the direct relationship between the level of technique and its effectiveness in terms of performance in 100 m front crawl standard discipline. A cross site scripting attack is a very specific type of attack on a web application.

It is used by hackers to mimic real sites and fool people into providing personal data. XSS Attacks starts by defining the terms and laying out the ground work. It assumes that the reader is familiar with basic web programming (HTML) and JavaScript. First it discusses the concepts, methodology, and technology that makes XSS a valid concern. It then moves into the various types of XSS attacks, how they are implemented, used, and abused. After XSS is thoroughly explored, the next part provides examples of XSS malware and demonstrates real cases where XSS is a dangerous risk that exposes internet users to remote access,

sensitive data theft, and monetary losses. Finally, the book closes by examining the ways developers can avoid XSS vulnerabilities in their web applications, and how users can avoid becoming a victim. The audience is web developers, security practitioners, and managers. International Marine

Organizations Penguin Environmental engineering has a leading role in the elimination of ecological threats, and deals, in brief, with securing technically the conditions which create a safe environment for mankind to live in. Due to its interdisciplinary character it can deal with a wide range of technical and technological problems. Since environmental engineering uses the knowledge of the basic sciences – biology, chemistry, biochemistry and physics – it is able to neutralise pollution in all the elements of the environment, i.e. the hydrosphere, atmosphere and lithosphere.

Moreover, environmental engineering deals with the design and maintenance of systems of water supply, sewage disposal, heating, ventilation and air-conditioning in buildings. Environmental Engineering IV contains 77 peer reviewed papers selected from 527 presented at the 4th Congress of Environmental Engineering (Lublin, Poland, 2-5 September 2012). The contributions are divided into 7 chapters:

- Water supply
- Water and wastewater treatment
- Neutralization of solid wastes and sludge
- Air protection and quality
- Indoor microclimate

Energy • Biology and Environmental Engineering IV assesses the state of scientific research in various areas of environmental engineering, evaluates the organizational, technical and technological progress made in contributing to ecological security, and determines the place of environmental engineering in sustainable development, taking into account current political and economic conditions, and is a valuable source of information for the environmental engineering professional and academic community.
