There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to

---

investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

Technology segregation is an ongoing practice within early childhood programs in the United States. This research, which includes two qualitative studies in the Northeast, reveals that school segregation and technology segregation are one in the same. Utilizing critical race theory, as the theoretical framework, this research finds that young Black children are denied technological access directly affecting their learning trajectories. PTO fundraising and other monetary donations to public schools vary by

---

district and neighborhood and are based on segregation.

Therefore, structural racism flourishes within these early childhood programs as black students are excluded from another important content area and practice. This book defines the problem of technology segregation in terms of policy, racial hierarchies, funding, residential segregation, and the digital divide. It challenges the racist framework and reveals disruptions (strategies) to counter this deficit discourse based on white supremacy.
