**Engineering News** Vintage Winner of the 1964 Pulitzer Prize in Nonfiction Anti-Intellectualism in American Life is a book which throws light on many features of the American character. Its concern is not merely to portray the scorners of intellect in American life, but to say something about what the intellectual is, and can be, as a force in a democratic society. "As Mr. Hofstadter unfolds the fascinating story, it is no crude battle of eggheads and fatheads. It is a rich, complex, shifting picture of the life of the mind in a society dominated by the ideal of practical success." —Robert Peel in the Christian Science Monitor

**Power Lawnmowers** University Press of Kentucky An architectural monthly. American Women and Flight since 1940 Psychology Press

" Individual women ' s stories enliven almost every page " of this comprehensive illustrated reference, now updated, from the National Air and Space Museum (Technology and Culture). Women run wind tunnel experiments, direct air traffic, and fabricate airplanes. American women have been involved with flight from the beginning. But until 1940, most people believed women could not fly, that Amelia Earhart was an exception to the rule.

World War II changed everything. " It is on the record that women can fly as well as men, " stated General Henry H. Arnold, commanding general of the Army Air Forces. Then the question became " Should women fly? " Deborah G. Douglas tells the story of this ongoing debate and its impact on American history. From Jackie Cochran, whose perseverance led to the formation of the Women ' s Army Service Pilots (WASP) during World War II to the more recent achievements of Jeannie Flynn, the Air Force ' s first woman fighter pilot and Eileen Collins, NASA ' s first woman shuttle commander, Douglas introduces a host of determined women who overcame prejudice and became military fliers, airline pilots, and air and space engineers. Not forgotten are stories of flight attendants, air traffic controllers, and mechanics. American Women and Flight since 1940 is a revised and expanded edition of a Smithsonian National Air and Space Museum reference work. Long considered the single best reference work in the field, this new edition contains extensive new illustrations and a comprehensive bibliography.

The American Contractor CRC Press Although there has been a significant increase in studies of stress and coping processes in recent years, researchers have often approached these topics from rather narrow and constrained perspectives. Furthermore, little communication has occurred across disciplines and research directions, resulting in the emergence of several relatively isolated literatures. An outgrowth of the Eleventh Biennial West Virginia University Conference on Life-Span Development, this volume emphasizes two major themes: the importance of taking a life-span approach to the study of stress and coping, and the development of new and more complete conceptual models of stress and coping processes. The first to approach these subjects from a life-span perspective, this book includes papers by distinguished researchers from each of the major periods of the life-span, and brings together the cognitive and socioemotional traditions in the study of dealing with pressures. The editors hope that this facilitation of communication among researchers with diverse views will help create a broadening and integration of perspectives.

To the Citizens of Bristol IARC "Among the crucial problems that confront mankind today are those associated with a degraded environment. This book examines the extent to which warfare and other military activities contribute to such degradation. The military capability to damage the environment and to cause ecological disruption has escalated, and there is no sign that the level of conflict in the world is decreasing. The military use and abuse of each of the several major global habitats -- temperate, tropical, desert, arctic, insular, and oceanic -- are evaluated separately in the light of the civil use and abuse of that habitat"--Dust jacket.

A Standard History of Lake County, Indiana, and the Calumet Region Boston New York, Houghton, Mifflin The IARC Monographs series publishes authoritative independent assessments by international experts of the carcinogenic risks posed to humans by a variety of agents, mixtures and exposures. They are a resource of information for both researchers and national and international authorities. This volume is particularly significant because tobacco smoke not only causes more deaths from cancer than any other known agent; it also causes more deaths from vascular and respiratory diseases. This volume contains all the relevant information on both direct and passive smoking. It is organised by first looking at the nature of agent before collecting the evidence of cancer in humans. This is followed by carcinogenicity studies on animals and then any other data relevant to an evaluation.

National Academies Organisations are now focused on total customer satisfaction. However there is a lack of understanding the requirements and the customer needs. Total Quality Management (TQM) integrates all phases and ensures a defect free quality product. This textbook provides the understanding of all aspects of TQM and the implementation. This textbook covers all aspects of TQM, discusses quality systems in detail, highlights the importance of the needs of the customer, and presents the concept of Total Productive Maintenance (TPM). Written as a textbook for students of engineering and management, but also explains all quality systems which will be helpful to all organisations in choosing the correct quality system and helpful to managers in decision making while analyzing any process. Many reference works offer compilations of critical documents covering individual liberty, local autonomy, constitutional order, and other issues that helped to shape the American political tradition. Yet few of those works are available in a form suitable for classroom use, and traditional textbooks give short shrift to these important issues. The American Republic overcomes that knowledge gap by providing, in a single volume, critical, original documents revealing the character of American discourse on the nature and importance of local government, the purposes of federal union, and the role of religion and tradition in forming America ' s drive for liberty. The American Republic is divided into

nine sections, each illustrating major philosophical, cultural, and policy positions at issue during crucial eras of American development. Readers will find documentary evidence of the purposes behind European settlement, American response to English acts, the pervasive role of religion in early American public life, and perspectives in the debate over independence. Subsequent chapters examine the roots of American constitutionalism, Federalist and Anti-Federalist arguments concerning the need to protect common law rights, and the debates over whether the states or the federal government held final authority in determining the course of public policy in America. Also included are the discussions regarding disagreements over internal improvements and other federal measures aimed at binding the nation, particularly in the area of commerce. The final section focuses on the political, cultural, and legal issues leading to the Civil War. Arguments and attempted compromises regarding slavery, along with laws that helped shape slavery, are highlighted. The volume ends with the prelude to the Civil War, a natural stopping-off point for studies of early American history. By bringing together key original documents and other writings that explain cultural, religious, and historical concerns, this volume gives students, teachers, and general readers an effective way to begin examining the diversity of issues and influences that characterize American history. The result unquestionably leads to a deeper and more thorough understanding of America's political, institutional, and cultural continuity and change. Bruce P. Frohnen is Associate Professor of Law at Ohio Northern University College of Law. He holds a J.D. from the Emory University School of Law and a Ph.D. in Government from Cornell University.
