This textbook explores probability and stochastic processes at a level that does not require any prior knowledge except basic calculus. It presents the fundamental concepts in a step-by-step manner, and offers remarks and warnings for deeper insights. The chapters include basic examples, which are revisited as the new concepts are introduced. To aid learning, figures and diagrams are used to help readers grasp the concepts, and the solutions to the exercises and problems. Further, a table format is also used where relevant for better comparison of the ideas and formulae. The first part of the book introduces readers to the essentials of probability, including combinatorial analysis, conditional probability, and discrete and continuous random variable. The second part then covers fundamental stochastic processes, including point, counting, renewal and regenerative processes, the Poisson process, Markov chains, queuing models and reliability theory. Primarily intended for undergraduate engineering students, it is also useful for graduate-level students wanting to refresh their knowledge of the basics of probability and stochastic processes.

This book offers an original contribution towards a new theory of intersubjectivity which places ethics of breath, hospitality and non-violence in the forefront. Emphasizing Indian philosophy and religion (Vedas and Upanishads) and related cross-cultural interpretations, it provides new intercultural interpretations of key Western concepts which traditionally were developed and followed in the vein of re-conceptualizations or revitalizations of Greek thought, as in Nietzsche and Heidegger, for example. The significance of the book lies in its establishment of a new platform for thinking philosophically about intersubjectivity, so as to nudge contemporary philosophy towards a more sensitive approach, which is needed in our times. Its originality lies in its innovative approach, which searches for the origin of ethical gestures (represented in respecting the breath/breathing) through the newly introduced concept of “ mesocosm ” as a space of a ritual, or a new ethical space of intersubjective encounters. The book also introduces the possibility of an original ethics based on breath. Intended for philosophers, feminists and others concerned with intercultural philosophy and comparative religion, the book will appeal to readers interested in contemporary ethical and political theories of peaceful conflict resolution and concepts of hospitality. A Breath of Hospitality will benefit all who seek a more sensitive approach in philosophy, including philosophy of religion, and often-neglected practical and educational layers of our everyday intersubjective relations.

This volume addresses major evolutionary changes that took place during the Mesozoic and the Cenozoic. These include discussions on major evolutionary radiations and ecological innovations on land and at sea, such as the Mesozoic marine revolution, the Mesozoic radiation of vertebrates, the Mesozoic lacustrine revolution, the Cenozoic radiation of mammals, the evolution of paleosol biotas, and the evolution of hominins. The roles of mass extinctions at the end of the Triassic and at the end of the Cretaceous are assessed. This volume set provides innovative reviews of the major evolutionary events in the history of life from an ichnologic perspective. Because the long temporal range of trace fossils has been commonly emphasized, biogenic structures have been traditionally overlooked in macroevolution. However, comparisons of ichnofaunas through geologic time do reveal the changing ecology of organism-substrate interactions. The use of trace fossils in evolutionary paleoecology represents a new trend that is opening a window for our understanding of major evolutionary radiations and mass extinctions. Trace fossils provide crucial evidence for the recognition of spatial and temporal patterns and processes associated with paleoecologic breakthroughs.
