Visit Gettysburg, Pennsylvania, showcased by 160 beautiful historic postcards, memorializing important and noteworthy scenes as though browsing a family picture album. The Battle of Gettysburg, fought from July 1 to July 3, 1863, with over 51,000 American casualties make this battle the single-most costly conflict fought within the United States. This book, however, is as much about the visitors to Gettysburg as it is about the soldiers and the battle struggles. See battlefields, monuments, statues, soldiers, town citizens, and beautiful landscape scenes and relive history via quotes from the writing that grace some of the greetings. Those who have been to the battlefield will recognize familiar places. For others, who have never spent time in this busy, yet tranquil, place, it will be like receiving postcards from a friend saying "wish you were

here" or "Greetings from Gettysburg."

Performance Tuning in Theory and

2008 Outstanding Academic Title,
Choice Magazine From dirt bikes and

jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information

from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.
