The Last Lecture Simon and Schuster
"We cannot change the cards we are dealt, just how we play the hand."---Randy Pausch A lot of professors give talks titled "The Last Lecture." Professors are asked to consider their demise and to ruminate on what matters most to them. And while they speak, audiences can't help but mull the same question: What wisdom would we impart to the world if we knew it was our last chance? If we had to vanish tomorrow, what would we want as our legacy? When Randy Pausch, a computer science professor at Carnegie Mellon, was asked to give such a lecture, he didn't have to imagine it as his last, since he had recently been diagnosed with terminal cancer. But the lecture he gave--"Really Achieving Your Childhood Dreams"--wasn't about dying. It was about the importance of overcoming obstacles, of enabling the dreams of others, of seizing every moment (because "time is all you have...and you may find one day that you have less than you think"). It was a summation of everything Randy had come to believe. It was about living. In this book, Randy Pausch has combined the humor, inspiration and intelligence that made his lecture such a phenomenon and given it an indelible form. It is a book that will be shared for generations to come.

There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

What is Jewish cooking in France? That is the question that has haunted Joan Nathan over the years and driven her to unearth the secrets of this hidden cuisine. Now she gives us the fruits of her quest in this extraordinary book, a treasure trove of delectable kosher recipes and the often moving stories behind them, interlaced with the tumultuous two-thousand-year history of the Jewish presence in France. In her search, Nathan takes us into kitchens in Paris, Alsace, and the Loire Valley; she visits the bustling Belleville market in Little Tunis in Paris; she breaks bread around the

observation of the Sabbath and the celebration of special holidays. All across France she finds that Jewish cooking is more alive than ever. Traditional dishes are honored, yet many have acquired a French finesse and reflect regional differences. The influx of Jewish immigrants from North Africa following Algerian independence has brought exciting new flavors and techniques that have infiltrated contemporary French cooking, and the Sephardic influence is more pronounced throughout France today. Now, with Joan Nathan guiding us, carefully translating her discoveries to our own home kitchens, we can enjoy: • appetizers such as the rich subtle delight of a Terrine de Poireaux from Alsace or a brik, that flaky little pastry from North Africa, folded over a filling of tuna and cilantro; • soups such as cold sorrel or Moroccan Proven ç al Fish Soup with garlicky Rouille; • salads include a Mediterranean Artichoke and Orange Salad with Saffron Mint and a Tunisian Winter Squash Salad with Coriander and Harissa; • a variety of breads, quiches, and kugels—try a Brioche for Rosh Hashanah, a baconless quiche Lorraine, or a Sabbath kugel based on a centuries-old recipe; • main courses of Choucroute de Poisson; a tagine with chicken and quince; Brisket with Ginger, Orange Peel, and Tomato; Southwestern Cassoulet with Duck and Lamb; Tongue with Capers and Cornichons; and Almondeguilles (Algerian meatballs); • an inviting array of grains, pulses, couscous, rice, and unusual vegetable dishes, from an eggplant gratin to a m é lange of Chestnuts, Onions, and Prunes; • for a grand finale, there are Parisian flans and tarts, a Frozen Souffl é Rothschild, and a Hanukkah Apple Cake, as well as many other irresistible pastries and cookies. These are but some of the treasures that Joan Nathan gives us in this unique collection of recipes and their stories. In weaving them together, she has created a book that is a testament to the Jewish people, who, despite waves of persecution, are an integral part of France today, contributing to the glory of its cuisine. From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters? *The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. THE DISAPPEARING SPOON masterfully fuses science with the classic lore of invention, investigation, and discovery--from the Big Bang through the end of time. *Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.

Cities are the new battleground of our increasingly urban world. From the slums of the global South to the wealthy financial centers of the West, *Cities Under Siege* traces the spread of political violence through the sites, spaces, infrastructure and symbols of the world ’ s rapidly expanding metropolitan areas. Drawing on a wealth of original research, Stephen Graham shows how Western militaries and security forces now perceive all urban terrain as a conflict zone inhabited by lurking shadow enemies. Urban inhabitants have become targets that need to be continually tracked, scanned and controlled. Graham examines the transformation of Western armies into high-tech urban counter-insurgency forces. He looks at the militarization and surveillance of international borders, the use of ‘ security ’ concerns to suppress democratic dissent, and the enacting of legislation to suspend civilian law. In doing so, he reveals how the New Military Urbanism permeates the entire fabric of urban life, from subway and transport networks hardwired with high-tech ‘ command and control ’ systems to the insidious militarization of a popular culture corrupted by the all-pervasive discourse of ‘ terrorism. ’

“ A flawless compendium of flaws. ” —Alice Roberts, PhD, anatomist, writer, and presenter of The Incredible Human Journey The antidote to fuzzy thinking, with furry animals! Have you read (or stumbled into) one too many irrational online debates? Ali Almosawi certainly had, so he wrote *An Illustrated Book of Bad Arguments!* This handy guide is here to bring the internet age a much-needed dose of old-school logic (really old-school, à la Aristotle). Here are cogent explanations of the straw man fallacy, the slippery slope argument, the ad hominem attack, and other common attempts at reasoning that actually fall short—plus a beautifully drawn menagerie of animals who (adorably) commit every logical faux pas. Rabbit thinks a strange light in the sky must be a UFO because no one can prove otherwise (the appeal to ignorance). And Lion doesn ’ t believe that gas emissions harm the planet because, if that were true, he wouldn ’ t like the result (the argument from consequences). Once you learn to recognize these abuses of reason, they start to crop up everywhere from congressional debate to YouTube comments—which makes this geek-chic book a must for anyone in the habit of holding opinions.
