The Tek hybrid U800 IC part no 155-0241-02, that is really hard to find for the replacement but easily gets killed caused by overheating. This poor little ic is handling the whole horizontal part of the scope, and when powered on, it is very-very hot that almost burned my finger when touching the ic black body.

Concerning my Tektronix 2465 repair I yesterday replaced both 0.068uF 250VAC caps after I had received the ordered new 275VAC caps. Both caps are C1016 and C1018 in the Tektronix service manual schematic on Board A2A1. And only the C1016 0.068uF capacitor had blown which also damaged the serie resistor R1016 of 68 ohm 5%.

Which also was replaced.
