(Book). Why does an electric archtop sound so different from a solidbody guitar when they have the same strings and pickups?

Why does Eric Clapton use a vibrato Stratocaster with the vibrato arm removed and the mechanism blocked off with a piece of wood? Why does a strings-though-body guitar sound brighter than an instrument with the strings anchored at the bridge? The sound of an electric guitar is the sum of many parts. Every component, from the wood in the neck to the metal in the tuners and everything in between including the amount of air in the body affects the overall tone of an instrument. In this book, Dave Hunter looks at the development of the electric guitar since the earliest instruments in the late 1930s, and how, since then, guitar makers and players have sought to define and refine all the elements that create a guitar's tone. This book includes: analysis of the different components that make up a guitar and how each affects the sound of an instrument; chapter-by-chapter breakdown of the main body types, their characteristics, and their strengths and weaknesses; in-depth specifications of over 70 guitars; interviews with significant people in the guitar-making world; audio examples of many of the guitar sounds described in the book. By looking at all the variables involved, this book will set you, the player, on the road to achieving that sound you've always wanted.

For years, experts have argued over the tiny details of exactly how they do what they do, and how their various components interact. In this thorough and authoritative book, Dave Hunter cuts through the marketing hyperbole, and the blind faith, and supplies all the information you need to choose the right amp, and get the best from it. The book also features exclusively conducted, in-depth interviews with leading figures in the tube amp-building world including Ken Fischer, Mark Sampson, and Michael Zaitte and even provides full instructions on how to construct your own high-quality tube guitar amp from scratch.
