[Therapy and Equipment Needs of People with Cerebral Palsy and Like Disabilities in Australia](#) Springer Science & Business Media

This comprehensive introduction to the field of fluid mechanics does not restrict its emphasis to a particular discipline. The first part of the book introduces basic principles such as pressure variation, the momentum principle, and energy equations. The second part uses these principles in general applications. This edition presents expanded coverage of civil engineering topics. It continues to follow the control-volume approach established

in earlier editions. It also includes almost all steps in the derivations, along with complete word descriptions, and rigorous and clear derivation of equations.

Ecological Golf Course Management is the most comprehensive work ever done on ecological turf management. It's a must-have for any golf course superintendent, sports field manager, or turf professional interested in reducing or eliminating chemical pesticide use. Ecological Golf Course Management focuses on managing the health and welfare of all soil organisms from a single-celled bacterium to fully developed turf plants and connects the reader to the important and relevant interactions between them. It points out ways to exploit natural plant defense systems that have been largely ignored and to engage many of the powerful allies that live above and below ground. Ecological Golf Course Management explores in detail the many aspects of: * Biological and botanical pest control * Plant stress management * Compost production and use * Natural disease suppressants * Biological fertility management * Soil, leaf tissue, and water analysis * The ecological impact of conventional pesticides and cultural practices

Althusser and Law is the first book specifically dedicated to the place of law in Louis Althusser's philosophy. The growing importance of Althusser's philosophy in contemporary debates on the left has - for practical and political, as well theoretical reasons - made a sustained consideration of his conception of law more necessary than ever. As a form of what Althusser called 'Ideological State Apparatuses', law is at the forefront of political struggles: from the destruction of Labour Law to the exploitation of Patent Law; from the privatisation of Public Law to the ongoing hegemony of Commercial Law; and from the discourse on Human Rights to the practice of judicial courts. Is Althusser still useful in helping us to understand these struggles? Does he have something to teach us about how law is produced, and how it is used and misused? This collection demonstrates that Althusser's ideas about law are more important, and more contemporary, than ever. Indeed, the contributors to Althusser and Law argue that Althusser offers a new and invaluable perspective on the place of law in contemporary life.

For many children much of the time their experience in classrooms can be rather dull, and yet the world the school is supposed to initiate children into is full of wonder. This book offers a rich understanding of the nature and roles of wonder in general and provides multiple suggestions for to how to revive wonder in adults (teachers and curriculum makers) and how to keep it alive in children. Its aim is to show that adequate education needs to take seriously the task of evoking wonder about the content of the curriculum and to show how this can routinely be done in everyday classrooms. The authors do not wax flowery; they present strong arguments based on either research or precisely described experience, and demonstrate how this argument can be seen to work itself out in daily practice. The emphasis is not on ways of evoking wonder that might require virtuoso teaching, but rather on how wonder can be evoked about the everyday features of the math or science or social studies curriculum in regular classrooms.

Australia's first Robotics Roadmap is a guide to how Australia can harness the benefits of a new robot economy. Building on Australia's strengths in robot talent and technologies in niche application areas, the roadmap acts a guide to how Australia can support a vibrant robotics industry that supports automation across all sectors of the Australian economy. The world-leading Australian Centre for Robotic Vision, an ARC Centre of Excellence, partnered with industry, researchers and government to drive this important initiative. A national consultation process was held culminating in a series of workshops across key sectors including resources, built and natural environment, manufacturing, services (including transport & logistics), healthcare and defence. Australia has a unique opportunity to take a leading role in the development of robotic technologies and in the tech sector more generally. The roadmap demonstrates Australia's existing capability and forecasts future applications, as well as providing recommendations on harnessing the new and emerging technologies being developed in Australia today. By describing what is possible and what is desirable, the roadmap aims to create the grounds for the necessary co-operation to allow robots to help unlock human potential, modernise the economy and build national health, well-being and sustainability despite the challenges of our vast and remote geography.

Wonder-Full Education

This book provides an introduction to health interoperability and the main standards used. Health interoperability delivers health information where and when it is needed. Everybody stands to gain from safer more soundly based decisions and less duplication, delays, waste and errors. The third edition of Principles of Health Interoperability includes a new part on FHIR (Fast Health Interoperability Resources), the most important new health interoperability standard for a generation. FHIR combines the best features of HL7's v2, v3 and CDA while leveraging the latest web standards and a tight focus on implementability. FHIR can be implemented

at a fraction of the price of existing alternatives and is well suited for use in mobile phone apps, cloud communications and EHRs. The book is organised into four parts. The first part covers the principles of health interoperability, why it matters, why it is hard and why models are an important part of the solution. The second part covers clinical terminology and SNOMED CT. The third part covers the main HL7 standards: v2, v3, CDA and IHE XDS. The new fourth part covers FHIR and has been contributed by Grahame Grieve, the original FHIR chief.

The Airport Business provides a helpful overview of the field, examining patterns of ownership for some of the world's largest airports over the past twenty years. Rigas Doganis covers the key issues and economic problems which will affect airport managers during the 1990s: privatization, the growing shortfall in airport capacity, and the need to develop more innovative methods of financing. Doganis analyzes the recent development of traditional cost and revenue systems for aircraft landing fees and passenger charges. He also discusses the differences in airport management between developed an.
