This book describes a new structural system in wood that represents the first significant challenge to concrete and steel structures since their inception in tall building design more than a century ago. The introduction of these ideas is driven by the need to find safe, carbon-neutral and sustainable alternatives to the incumbent structural materials of the urban world. The potential market for these ideas is quite simply

enormous. The proposed solutions have the potential to revolutionize the building industry, address the major challenges of climate change, urbanization, and sustainable development and to significantly contribute to world housing needs.

As simple as the arbitrability question might appear (namely, what types of issues may and may not be submitted to arbitration), for a legal system to set a clear and consistent approach to arbitration, it must consider many complicated factors that relate to public policy and economic priorities as well as international relations. This comprehensive, precise, and practical book identifies and analyzes the fundamentals of, and major approaches to, arbitrability in the current international context. The authors focus on nine major arbitration jurisdictions—the United States, Canada, France, England and Wales, Switzerland, Germany, China (Mainland), Hong Kong, and Singapore—with meticulous attention to each jurisdiction's pertinent case law and legislative framework as well as relevant commentary. For each jurisdiction, the arbitrability of disputes in the following fields of law is discussed: antitrust/competition; bankruptcy/insolvency; consumer; corporate; family/domestic relations; intellectual property (copyright, patent, and trademark); labor/employment; securities; and torts. Based on the jurisdiction-by-jurisdiction analysis, the authors identify key areas in which the selected jurisdictions share similarities and evince differences with respect to each of the above-mentioned fields. With a structure that enables readers to easily locate what they are looking for and gives clear-cut answers, this unique book fully elucidates the notion of arbitrability by identifying the key concepts, the applicable rules, and different criteria for arbitrability and by explaining how different jurisdictions deal with specific types of disputes. It will be welcomed by counsel, arbitrators, judges, students, and academics active in international arbitration and the enforcement of arbitral awards.

It is often assumed that shareholders have rights, not duties. In recent years, however, this assumption has come under intense scrutiny in all aspects of company law and capital market law - legislation, the courts, soft law, and scholarship - and, in Europe especially, major changes are under way across a diverse spectrum all the way from revised contractual arrangements to mandatory statutory provisions. Such a shift has important implications for the fundamentals of European company law, and there is a need to examine shareholders' duties and to consider where this trend is taking shareholders and their stance in law. This focused collection of essays by twenty notable scholars addresses this complex subject from a highly informative and useful variety of perspectives. Examining shareholders' duties along three axes - types of investee companies, types of shareholders, and types of business situations - the essays deal with such topics and issues as the following: - shareholders' duties as reflections of the interests they are intended to safeguard; - shareholders' duties to society; - shareholders' disclosure obligations; - duties of parent companies; - institutional investor's fiduciary duty; - how regulatory duties constrain value-reducing forms of opportunism; - the state's continuing duties in the transformation of state-owned companies; - significant shareholders' duties in transactions with the company; and - powerful shareholders' duty not to abuse right. Examining the implications of this shift in discourse - how shareholders' duties are coming to the fore under the impetus of legislation, legal doctrine, case law, and enforcement strategies - as well as its ideological underpinnings, this book offers a comprehensive and in-depth consideration of this rapidly developing field. It will prove of inestimable value not only to policymakers and academics, but also to investors and practitioners committed to creating conditions favourable to sustainable economic growth and responsible business behaviour.

New investment techniques and new types of shareholder activists are shaking up the traditional ways of equity investment that informs much of our present-day corporate law and governance. Savvy investors such as hedge funds are using financial derivatives, securities lending transactions, and related concepts to decouple the financial risk from shares. This leads to a distortion of incentives and has potentially severe consequences for the functioning of corporate governance and of capital markets overall. Taking stock of the different decoupling strategies that have become known over the past several years, this book then provides an evaluation of each from a legal and an economic perspective. Based on several analytical frameworks, the author identifies the elements of equity deconstruction and demonstrates

the consequences for shareholders, outside investors, and capital markets. On this basis, the book makes the case for regulatory intervention, based on three different pillars and comprising disclosure, voting right suspension, and ex-post litigation. The book concludes by developing a concrete, comprehensive proposal on how to address the regulatory problem. Overall, this book contributes to the debate about activist investment and the role of shareholders in corporate governance. At the same time it raises a number of important considerations about the role of equity investment more generally.
