Global Best Practice in Private Equity Investing Private Equity in Action takes you on a tour of the private equity investment world through a series of case studies written by INSEAD faculty and taught at the world's leading business schools. The book is an ideal complement to Mastering Private Equity and allows readers to apply core concepts to investment targets and portfolio companies in real-life settings. The 19 cases illustrate the managerial challenges and risk-reward dynamics common to private equity investment. The case studies in this book cover the full spectrum of private equity strategies, including: Carve-outs in the US semiconductor industry (LBO) Venture investing in the Indian wine industry (VC) Investing in SMEs in the Middle East Turnaround situations in both emerging and developed markets Written with leading private equity firms and their advisors and rigorously tested in INSEAD's MBA, EMBA and executive education programmes, each case makes for a compelling read. As one of the world's leading graduate business schools, INSEAD offers a global educational experience. The cases in this volume leverage its international reach, network and connections, particularly in emerging markets. Private Equity in Action is the companion to Mastering Private Equity: Transformation via Venture Capital, Minority Investments & Buyouts, a reference for students, investors, finance professionals and business owners looking to engage with private equity firms. From deal sourcing to exit, LBOs to responsible investing, operational value creation to risk management, Mastering Private Equity systematically covers all facets of the private equity life cycle.

Key Capabilities of an Electronic Health Record System Biblio Publishing

How effectively can governing mechanisms forged before the surge of activist investment continue to protect shareholders and efficiently order capital markets? This is a pressing question for scholars and practitioners of corporate law, as well as for market participants generally. In order to illuminate the extent to which the growing trend of shareholder activism calls for a new understanding of the kind of shareholder-corporate relations the law should facilitate, this book introduces the concept of shareholder-driven corporate governance. This concept refers to the evident phenomenon of shareholder involvement in corporate governance and offers a normative endorsement of this development. In order to secure the benefits of investors' increasing involvement in corporate affairs, regulatory regimes must grapple with a number of considerations. This book is based on the idea that shareholder corporate governance is a welcome development, but that it does not come without regulatory challenges. For one, it requires rejecting the idea that well-ordered capital markets can be achieved through corporate law which is subservient to private ordering. The mandatory character of, for example, securities regulation is vital to fostering shareholder involvement in corporate affairs. Defenders of shareholder corporate governance must also confront the matter of "wolf packs," or loosely formed bands of investors who defy existing regulatory categories but nonetheless exert collective influence. Regulation that is sensitive to both the inadequacies of past approaches to corporate-shareholder relations and the novel challenges posed by increasing shareholder activism will be able to harness activism, allowing capital markets to flourish.

Modern Project Finance Springer Science & Business Media

This textbook is a complete rewrite, and expansion of Hugh Rollinson's highly successful 1993 book Using Geochemical Data: Evaluation, Presentation, Interpretation. Rollinson and Pease's new book covers the explosion in geochemical thinking over the past three

decades, as new instruments and techniques have come online. It provides a comprehensive overview of how modern geochemical data are used in the understanding of geological and petrological processes. It covers major element, trace element, and radiogenic and stable isotope geochemistry. It explains the potential of many geochemical techniques, provides examples of their application, and emphasizes how to interpret the resulting data. Additional topics covered include the critical statistical analysis of geochemical data, current geochemical techniques, effective display of geochemical data, and the application of data in problem solving and identifying petrogenetic processes within a geological context. It will be invaluable for all graduate students, researchers, and professionals using geochemical techniques.

Mastering Private Equity National Academies Press

Business leaders remain exposed to financial and accounting fraud as well as loss of profitability, despite the dictates of the SOX Act of 2002. The most challenging aspect of corporate management is the unexpected nature of an emerging, existing, or an inherent financial risk. Guided by the evolution of fraud theory, this exploratory case study's purpose was to identify and explore the financial management strategies that corporate financial managers need to adequately protect investors. Twenty participants from a population group of corporate auditors of Fortune 1000 corporations within 70 miles of Columbus, Ohio provided input for this study. Data from the interviews were analyzed through coding, reviewing, categorizing, and combining common statements. The research findings included themes of knowledge and types of risks; the impact of financial fraud and risks on investment; the impact of accounting, auditing, and financial reporting standards; as well as financial management training to minimize audit expectations. These themes formed the focus of exploring the financial management strategies that corporate financial managers need to adequately protect investors and investments. In addition to the antifraud measures, financial managers may detect and control inherent risks in emerging opportunities for positive social change that includes enhanced knowledge in diversification of investments, an increase in economic resources, economic growth, and greater employment in the United States.

Narrowing the Gap of Financial Fraud Detection in Corporations IDRC

On February 21, 2013, TELUS announced a proposal to convert the firm's non-voting shares into voting shares on a one-to-one basis, thereby eliminating the firm's dual class structure. Despite strong support from management, the board, two proxy advisory firms, and several large shareholders, the proposal was opposed by Mason Capital Management, a New York-based, event-driven hedge fund. Mason, which controlled almost 20% of the voting shares and had a large short position in the non-voting shares, had filed a dissident proxy circular recommending that shareholders vote against the proposal. With the success of the vote in doubt, the TELUS board had to decide what to do. Should they proceed with the vote as planned, postpone the vote with the intention of re-introducing the proposal at some point in the future, or cancel the proposal for good? And what should they do with Mason, which management viewed as an "empty voter" in this matter? Although this case was written for an advanced corporate finance course, it is appropriate for other courses such as Investment Strategies, Alternative Investments, Hedge Funds, and Corporate Governance. The case has four learning objectives: 1) highlight the complex and poorly defined, yet increasingly common and controversial practice of "empty voting" (or equity decoupling); 2) provide an opportunity to discuss the mechanics and the economics of short selling as implemented by an event-driven hedge fund; and, 3) raise several fundamental questions about corporate governance such as why do shareholders have voting rights and why are voting rights valuable; and, 4) expose students to a range of institutional structures such as proxy contests, activist shareholders, dual class ownership structures, proxy advisors (ISS and Glass Lewis), and special committees.

Communities, Livelihoods and Natural Resources University of Calgary Press

A study of Internet blocking and filtering around the world: analyses by leading researchers and survey results that document filtering practices in dozens of countries. Many countries around the world block or filter Internet content, denying access to information that they deem too sensitive for ordinary citizens—most often about politics, but sometimes relating to sexuality, culture, or religion. Access Denied documents and analyzes Internet filtering practices in more than three dozen countries, offering the first rigorously conducted study of an accelerating trend. Internet filtering takes place in more than three dozen states worldwide, including many countries in Asia, the Middle East, and North Africa. Related Internet content-control mechanisms are also in place in Canada, the United States and a cluster of countries in Europe. Drawing on a just-completed survey of global Internet filtering undertaken by the

OpenNet Initiative (a collaboration of the Berkman Center for Internet and Society at Harvard Law School, the Citizen Lab at the University of Toronto, the Oxford Internet Institute at Oxford University, and the University of Cambridge) and relying on work by regional experts and an extensive network of researchers, Access Denied examines the political, legal, social, and cultural contexts of Internet filtering in these states from a variety of perspectives. Chapters discuss the mechanisms and politics of Internet filtering, the strengths and limitations of the technology that powers it, the relevance of international law, ethical considerations for corporations that supply states with the tools for blocking and filtering, and the implications of Internet filtering for activist communities that increasingly rely on Internet technologies for communicating their missions. Reports on Internet content regulation in forty different countries follow, with each two-page country profile outlining the types of content blocked by category and documenting key findings. Contributors Ross Anderson, Malcolm Birdling, Ronald Deibert, Robert Faris, Vesselina Haralampieva [as per Rob Faris], Steven Murdoch, Helmi Noman, John Palfrey, Rafal Rohozinski, Mary Rundle, Nart Villeneuve, Stephanie Wang, Jonathan Zittrain Access Denied Bloomsbury Publishing

The emergence of COVID-19 has raised urgent and important questions about the role of Canadian intelligence and national security within a global health crisis. Some argue that the effects of COVID-19 on Canada represent an intelligence failure, or a failure of early warning. Others argue that the role of intelligence and national security in matters of health is—and should remain—limited. At the same time, traditional security threats have rapidly evolved, themselves impacted and influenced by the global pandemic. Stress Tested brings together leading experts to examine the role of Canada's national security and intelligence community in anticipating, responding to, and managing a global public welfare emergency. This interdisciplinary collection offers a clear-eyed view of successes, failures, and lessons learned in Canada's pandemic response. Addressing topics including supply chain disruptions, infrastructure security, the ethics of surveillance within the context of pandemic response, the threats and potential threats of digital misinformation and fringe beliefs, and the challenges of maintaining security and intelligence operations during an ongoing pandemic, Stress Tested is essential reading for anyone interested in the lasting impacts of the COVID-19 pandemic.

The Pyramid Principle Cambridge University Press

The corporation is the most complex, adaptive, and resilient model of organizing economic activity in history. In an era of globalization, the transnational corporation has significant power over society. While its rights are specified through private ordering, and choice of jurisdictional home, in the event of conflict of laws, the corporation's duties and responsibilities remain contested. Notwithstanding the argument in institutional economics that all transactions take place within governance and legal frameworks, underpinned by a 'non-calculative social contract,' the terms are notoriously difficult to define or enforce. They are made more so if regulatory dynamics preclude litigation to a judicial conclusion. This Element situates the corporation - its culture, governance, responsibility, and accountability - within a broader discourse of duty. In doing so, it addresses the problem of the corporation for society and the corporation's problem in aligning its governance to changing community expectations of obligation.

The Information Paradox CABI

Poplars and willows form an important component of forestry and agricultural systems, providing a wide range of wood and non-wood products. This book synthesizes research on poplars and willows, providing a practical worldwide overview and guide to their basic characteristics, cultivation and use, issues, problems and trends. Prominence is given to environmental benefits and the importance of poplar and willow cultivation in meeting the needs of people and communities, sustainable livelihoods, land use and development. Digital Labour Platforms and the Future of Work Island Press Transit-oriented development (TOD) seeks to maximize access to mass transit and nonmotorized transportation with centrally located rail or bus stations surrounded by relatively high-density commercial and residential development. New Urbanists and smart growth proponents have embraced the concept and interest in TOD is growing, both in the United States and around the world. New Transit Town brings together leading experts in planning, transportation, and sustainable design—including Scott Bernstein, Peter Calthorpe, Jim Daisa, Sharon Feigon, Ellen Greenberg, David Hoyt, Dennis Leach, and Shelley Poticha—to examine the first generation of TOD projects and derive lessons for the next generation. It offers topic chapters that provide detailed discussion of key issues along with case studies that present an in-depth look at specific projects. Topics examined include: the history of projects and the appeal of this form of development a taxonomy of TOD projects appropriate for different contexts and scales the planning, policy and regulatory framework of "successful" projects obstacles to financing and strategies for overcoming those obstacles issues surrounding traffic and parking the roles of all the actors

involved and the resources available to them performance measures that can be used to evaluate outcomes Case Studies include Arlington, Virginia (Roslyn-Ballston corridor); Dallas (Mockingbird Station and Addison Circle); historic transit-oriented neighborhoods in Chicago; Atlanta (Lindbergh Center and BellSouth); San Jose (Ohlone-Chynoweth); and San Diego (Barrio Logan). *New Transit Town* explores the key challenges to transit-oriented development, examines the lessons learned from the first generation of projects, and uses a systematic examination and analysis of a broad spectrum of projects to set standards for the next generation. It is a vital new source of information for anyone interested in urban and regional planning and development, including planners, developers, community groups, transit agency staff, and finance professionals.

Dividends And Dividend Policy As part of the Robert W. Kolb Series in Finance, *Dividends and Dividend Policy* aims to be the essential guide to dividends and their impact on shareholder value. Issues concerning dividends and dividend policy have always posed challenges to both academics and professionals. While all the pieces to the dividend puzzle may not be in place yet, the information found here can help you gain a firm understanding of this dynamic discipline. Comprising twenty-eight chapters—contributed by both top academics and financial experts in the field—this well-rounded resource discusses everything from corporate dividend decisions to the role behavioral finance plays in dividend policy. Along the way, you'll gain valuable insights into the history, trends, and determinants of dividends and dividend policy, and discover the different approaches firms are taking when it comes to dividends. Whether you're a seasoned financial professional or just beginning your journey in the world of finance, having a firm understanding of the issues surrounding dividends and dividend policy is now more important than ever. With this book as your guide, you'll be prepared to make the most informed dividend-related decisions possible—even in the most challenging economic conditions. The Robert W. Kolb Series in Finance is an unparalleled source of information dedicated to the most important issues in modern finance. Each book focuses on a specific topic in the field of finance and contains contributed chapters from both respected academics and experienced financial professionals.

Advances in Applied Economics, Business and Development Kluwer Law International B.V.

Blockchain technology is powering our future. As the technology behind cryptocurrencies like bitcoin and Facebook's Libra, open software platforms like Ethereum, and disruptive companies like Ripple, it's too important to ignore. In this revelatory book, Don Tapscott, the bestselling author of *Wikinomics*, and his son, blockchain expert Alex Tapscott, bring us a brilliantly researched, highly readable, and essential book about the technology driving the future of the economy. Blockchain is the ingeniously simple, revolutionary protocol that allows transactions to be simultaneously anonymous and secure by maintaining a tamperproof public ledger of value. Though it's best known as the technology that drives bitcoin and other digital currencies, it also has the potential to go far beyond currency, to record virtually everything of value to humankind, from birth and death certificates to insurance claims, land titles, and even votes. Blockchain is also essential to understand if you're an artist who wants to make a living off your art, a consumer who wants to know where that hamburger meat really came from, an immigrant who's tired of paying big fees to send money home to your loved ones, or an entrepreneur looking for a new platform to build a business. And those examples are barely the tip of the iceberg. As with major paradigm shifts that preceded it, blockchain technology will create winners and losers. This book shines a light on where it can lead us in the next decade and beyond.

Let's Play! Using some favorite children's books, singing games, listening activities, and original songs, Aimee has created dozens of Orff process lesson plans to activate children and let the PLAY with music. Learning through play helps a child make sense of the world around them. Playful learning increases confidence as well as self-esteem and builds relationships with others. It helps children problem-solve, understand rules and limits, encourages conflict resolution, inspires creativity and expands language. Why play? Mr. Rogers had it right when he said, "When we treat children's play as seriously as it deserves, we are helping them feel the joy that's to be found in the creative spirit. It's the things we play with and the people who help us play that make a great difference in our lives." Online materials are included with each book, including manipulatives, visuals, and vocal scores. Playlists for musical resources are available in iTunes and Spotify. Purchasers will be directed to a secure download page when the transaction is complete.

Perform fast interactive analytics against different data sources using the Trino high-performance distributed SQL query engine. With this practical guide, you'll learn how to conduct analytics on data where it lives, whether it's Hive, Cassandra, a relational database, or a proprietary data store. Analysts, software engineers, and production engineers will learn how to manage, use, and even develop with Trino. Initially developed by Facebook, open source Trino is now used by Netflix, Airbnb, LinkedIn, Twitter, Uber, and many other companies. Matt Fuller, Manfred Moser, and Martin Traverso show you how a single Trino query can combine data from multiple sources to allow for analytics across your entire organization. Get started: Explore Trino's use cases and learn about tools that will help you connect to Trino and query data Go deeper: Learn Trino's internal workings, including how to connect to and query data sources with support for SQL statements, operators, functions, and more Put Trino in production: Secure Trino, monitor workloads, tune queries, and connect more applications; learn how other organizations apply Trino

Electronic Signatures in Law John Wiley & Sons

Noninvasive mechanical ventilation is an effective technique for the management of patients with acute or chronic respiratory failure. This comprehensive and up-to-date book explores all aspects of the subject. The opening sections are devoted to theory and equipment, with detailed attention to the use of full-face masks or helmets, the range of available ventilators, and patient-ventilator interactions. Clinical applications are then considered in depth in a series of chapters that address the use of noninvasive mechanical ventilation in chronic settings and in critical care, both within and outside of intensive care units. Due attention is also paid to weaning from conventional mechanical ventilation, potential complications, intraoperative applications, and staff training. The closing chapters examine uses of noninvasive mechanical ventilation in neonatal and pediatric care. This book, written by internationally recognized experts, will be an invaluable guide for both clinicians and researchers.
