Shareholders throughout the world are becoming more assertive in pursuing their rights against companies and directors. The law is developing in all jurisdictions to make it easier for shareholders to assert their rights by bringing claims in front of the court. Recent cases have seen a growth in both institutional shareholders such as pension funds and groups of individual shareholders taking action. Shareholder Claims provides practical guidance on bringing claims including derivative claims under the UK Companies Act 2006, and claims under the Financial Services and Markets Act 2000, equivalent procedure in European centres and class action procedure in USA, Canada and Australia. Written for both shareholders taking action and companies defending themselves.

## Tall Wood Buildings Blurb

This book describes a new structural system in wood that represents the first significant challenge to concrete and steel structures since their inception in tall building design more than a century ago. The introduction of these ideas is driven by the need to find safe, carbon-neutral and sustainable alternatives to the incumbent structural materials of the urban world. The potential market for these ideas is quite simply enormous. The proposed solutions have the potential to revolutionize the building industry, address the major challenges of climate change, urbanization, and sustainable development and to significantly contribute to world housing needs.

This cutting-edge financial casebook is

divided into four modules: Structuring Projects, Valuing Projects, Managing Project Risk, and Financing Projects. The cases have been carefully selected to reflect actual use of project finance over the past five years in terms of geographic location (the cases come from 15 different countries) and industrial sectors. \* Benjamin Esty, of the Harvard Business School, is one of the leading scholars in project finance. \* Project finance is becoming the financing mechanism of choice for many private firms. \* Cases require the reader to integrate knowledge from multiple disciplines when making a single managerial decision. This integration of functional areas such as strategy, operations, ethics, and human resource management encourages the reader to adopt a more integrative perspective and understanding of the interconnectedness of managerial decision-making.

Co-published with UNESCO A product of the UNESCO-IHP project on Water and Cultural Diversity, this book represents an effort to examine the complex role water plays as a force in sustaining, maintaining, and threatening the viability of culturally diverse peoples. It is argued that water is a fundamental human need, a human right, and a core sustaining element in biodiversity and cultural diversity. The core concepts utilized in this book draw upon a larger trend in sustainability science, a recognition of the synergism and analytical potential in utilizing a coupled biological and social systems analysis, as the functioning viability of nature is both sustained and threatened by humans. *GLOBAL LEGAL INSIGHTS* Cambridge University Press

*Blockchain* technology is powering our future. As the technology behind cryptocurrencies like bitcoin and Facebook's Libra, open software platforms like Ethereum, and disruptive companies like Ripple, it's too important to ignore. In this revelatory book, Don Tapscott, the bestselling author of *Wikinomics*, and his son, blockchain expert Alex Tapscott, bring us a brilliantly researched, highly readable, and essential book about the technology driving the future of the economy. Blockchain is the ingeniously simple, revolutionary protocol that allows transactions to be simultaneously anonymous and secure by maintaining a tamperproof public ledger of value. Though it's best known as the technology that drives bitcoin and other digital currencies, it also has the potential to go far beyond currency, to record virtually everything of value to humankind, from birth and death certificates to insurance claims, land titles, and even votes. Blockchain is also essential to understand if you're an artist who wants to make a living off your art, a consumer who wants to know where that hamburger meat really came from, an immigrant who's tired of paying big fees to send money home to your loved ones, or an entrepreneur looking for a new platform to build a business. And those examples are barely the tip of the iceberg. As with major paradigm shifts that preceded it, blockchain technology will create winners and losers. This book shines a light on where it can lead us in the next decade and beyond.

"Buildings are currently a major part of the carbon emissions problem. Sustainability at the Cutting Edge indicates how they may become part of the solution. This fully updated new edition deals not only with current best practice and state-of-the-art case studies, but also with the very latest emerging technologies which will transform the relationship between buildings and energy. Professor Peter Smith describes how buildings can be made to significantly reduce their reliance on fossil-based energy by the use of solar and geothermal resources."  
"Packed with useful diagrams, charts and full colour photographs, this immensely practical book is a great reference for professionals in the design and construction industry."--BOOK JACKET.

This comprehensive, first-of-its kind title is an indispensable resource for pharmacists looking to learn or improve crucial patient assessment skills relevant to all pharmacy practice settings. Pharmacists' role as health care practitioners is evolving as they are taking a more active part in primary patient care -- helping patients manage their medications and diseases, providing patient education, and, in some jurisdictions, prescribing and adapting medications. To perform their day-to-day duties, pharmacists are best-served using a framework called the patient care process. This framework involves three steps: patient assessment; care plan development and implementation; and monitoring and follow up. Organized in four parts, this practical book begins with introductory chapters regarding the basics of patient assessment and the patient care process. Part II includes a detailed assessment of common symptoms encountered by pharmacists. Part III discusses assessment of patients with various chronic illnesses. Part IV addresses select specialized topics and assessment considerations. An invaluable contribution to the literature, *Patient Assessment in Clinical Pharmacy: A Comprehensive Guide* will be of great benefit to pharmacists, regardless of their practice setting, and to pharmacy students as well. *Be Our Guest* McGraw-Hill Companies  
Reducing and managing humanity's demand for energy is a fundamental part of the effort to mitigate climate change. In this, the most comprehensive textbook ever written on the subject, L.D. Danny Harvey lays out the theory and practice of how things must change if we are to meet our energy needs sustainably. The book begins with a succinct summary of the scientific basis for concern over global warming, then outlines energy basics and current patterns and trends in energy use. This is followed by a discussion of current and advanced technologies for the generation of electricity from fossil fuels. The book then considers in detail how energy is used, and how this use can be dramatically reduced, in the following end-use sectors: - buildings - transportation - industry - food and agriculture - municipal services The findings from these sector-by-sector assessments are then applied to generate scenarios of how global energy demand could evolve over the coming decades with full implementation of the identified and economically-feasible energy-saving potential. The book ends with a brief discussion of policies that can be used to reduce energy demand, but also addresses the limits of technologically-based improvements in efficiency in moderating demand and of the need to rethink some of our underlying assumptions concern ends with a brief discussing what we really need. Along with its companion volume on C-free energy supply, and accompanied by extensive supplementary online material, this is an essential

resource for students and practitioners in engineering, architecture, environment and energy related fields. Online material includes: Excel-based computational exercises, teaching slides for each chapter, links to free software tools.

**Energy and the New Reality 1** Penguin

"Considerable change has transpired in the years since the first edition of this book was published, yet the paradox remains - investments in IT-enabled business change are still not being consistently translated into business value. This is the Information Paradox -

the conflict between the widely held belief that information, and investment in IT to provide that information, is a "good thing" and the all too frequent reality that we cannot demonstrate a connection between IT investments and business results." "John Thorp and Fujitsu Consulting have continued to work with many clients around the world, implementing the Benefits Realization Approach - a unique, client-tested framework that introduces a benefits-focused mindset. Their experience has led to the understanding that the issues with IT value are merely a symptom of a broader business value problem, and to the development of a new, expanded approach - Enterprise Value Management." "A completely new Afterword outlines this new approach which goes beyond the challenge of IT value to provide a comprehensive value-driven organizational governance process. It builds on the foundation of benefits realization to help organizations manage value in an increasingly uncertain and real-time business environment. It takes readers to a new level of

understanding."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved Modern Project Finance

**The Guide to Challenging and Enforcing Arbitration Awards**

It is often assumed that shareholders have rights, not duties. In recent years, however, this assumption has come under intense scrutiny in all aspects of company law and capital market law -legislation, the courts, soft law, and scholarship - and, in Europe especially, major changes are under way across a diverse spectrum all the way from revised contractual arrangements to mandatory statutory provisions. Such a shift has important implications for the fundamentals of European company law, and there is a need to examine shareholders' duties and to consider where this trend is taking shareholders and their stance in law. This focused collection of essays by twenty notable scholars addresses this complex subject from a highly informative and useful variety of perspectives. Examining shareholders' duties along three axes - types of investee companies, types of shareholders, and types of business situations - the essays deal with such topics and issues as the following: - shareholders' duties as reflections of the interests they are intended to

safeguard; - shareholders' duties to society; - shareholders' disclosure obligations; - duties of parent companies; - institutional investor's fiduciary duty; - how regulatory duties constrain value-reducing forms of opportunism; - the state's continuing duties in the transformation of state-owned companies; - significant shareholders' duties in transactions with the company; and - powerful shareholders' duty not to abuse right. Examining the implications of this shift in discourse - how shareholders' duties are coming to the fore under the impetus of legislation, legal doctrine, case law, and enforcement strategies - as well as its ideological underpinnings, this book offers a comprehensive and in-depth consideration of this rapidly developing field. It will prove of inestimable value not only to policymakers and academics, but also to investors and practitioners committed to creating conditions favourable to sustainable economic growth and responsible business behaviour.
