In this fascinating collection of postings from his popular “Musings of an Energy Nerd” blog, Green Building Advisor's Martin Holladay cuts through the hype and myths about energy efficiency, sustainability, and green building to present the very best ways to make your home more energy efficient. Martin Holladay has been making weekly postings to his “Musings of an Energy Nerd” blog on

Green Building Advisor since January 2009. Along the way, he has gathered a devoted following of “energy nerds” who await his weekly musings with rapt anticipation. For the first time, the 50 most popular postings have been assembled in book form to give homeowners a great opportunity to live a more energy-efficient life in their homes. The book begins with an overview of energy priorities, and a discussion of what we mean by terms like green and sustainable. Martin presents several options for energy upgrades for an existing house (from replacing windows to adding superinsulation) before looking at ways to improve the energy efficiency of a new house. Separate chapters follow on HVAC, domestic hot water, appliances, and renewable energy, before the book wraps up with an

eye-opening chapter on useless products, scams, and myths (including Martin's list of “Stupid Energy-Saving Tips”).

Are rooms of your house  
uncomfortable or  
unusable at different times  
of the year? Is your home  
drafty in winter? Do you  
get hit with a wave of heat  
walking upstairs in  
summer? Are mold or  
pests frequent problems  
in your home? Do you get  
big icicles in winter? Do  
you suspect your home is

making you sick? Do you  
sleep better out of your  
house? Do you have a  
damp, dank basement?  
How about air quality  
problems like dust or  
odors? Are you ready to  
solve those problems?  
Then this book is for you.  
Before you can solve a  
problem, you need to  
understand what is  
causing the problem. This  
book explains how your  
home actually works so  
you can address root  
causes, not symptoms.  
We've seen far too many  
folks waste thousands of  
dollars addressing the  
wrong problem. Armed  
with this book, you can  
find the right pros to solve  
problems, understand if  
the work was done right,  
and even DIY many things  
yourself. This is the book I  
wish I had when I entered  
the Home Performance  
eld. It connects theory to  
action and shows real  
world examples of work  
being done and the results  
achieved. It assumes  
you're a building science  
novice as well as smart  
and willing to learn. You'll  
learn about how your  
home works, what to look  
for in a new heating and  
cooling (HVAC) system,  
what kinds of insulation

work best and why, how to  
choose and install the right  
bath fan, and more.

Everything in this book is  
backed up by field  
experience, data, and an  
overwhelming passion to  
do things right the first  
time.

This Ebook is dedicated to those who are eager to learn the HVACR Trade and Refrigerant

Charging/Troubleshooting Practices. In this book, you will find Step by Step

Procedures for preparing an air conditioning and heat pump system for refrigerant, reading the manifold gauge set, measuring the refrigerants charge level, and troubleshooting problems with the system's refrigerant flow. This book differs from others as it gives key insights into each procedure along with tool use from a technician's perspective, in language that the technician can understand. This book explains the refrigeration cycle of air conditioners and heat pumps, refrigerant properties, heat transfer, the components included in the system, the roles of each component, airflow requirements, and common problems. Procedures

Included: Pump Down, Vacuum and Standing Vacuum Test, Recovery and Recovery Bottle Use, Refrigerant Manifold Gauge Set and Hose Connections, Service Valve Positions and Port Access, Preparation of the System for Refrigerant, Refrigerant Charging and Recovery on an Active System, Troubleshooting the Refrigerant Charge and System Operation

Je parle francais... un peu:

Foundations in Beginning French teaches beginning French in a simple, clear, effective way. Many language textbooks focus solely on grammar, and are exclusively academic in focus. This engaging, interactive textbook makes students comfortable speaking and interacting in the target language, and puts them in charge of their own learning. Based on the premise that students best learn a language by using it to communicate with others rather than relying on technology, Je parle francais... un peu purposely steers students away from CDs, DVDs, and frenetic on-line learning. Instead, the

book provides numerous opportunities for students to speak and converse with each other through a variety of activities, such as dialogues, stories, cultural readings, tongue-twisters, word games, and famous quotes. Also included are les Conversations fran aises, which are in-class skits that encourage students to have fun and experiment with the language without feeling intimidated by the need to be grammatically perfect. The book is concise, containing only the amount of material that can be covered in a one-semester course. Tear-out worksheets are built into the text, which are perfect for homework assignments or additional practice, thus making it unnecessary to buy a supplemental workbook for the course. The tone of the book is un-intimidating, and conversational. The ten chapters of the book teach the language through high-interest topics including college life and personal technology. Extensively class-tested, the material in Je parle francais... un peu gives students what they need to successfully master written and spoken French at the beginning level. Je parle francais... un peu is written for French 1 and 2 at the community college or lower division university

level. It can also be used in Beginning French at the high school level. Dierdre Wolownick is Professor of French, Spanish, and ESL/EFL at American River College, Sacramento, CA. Since 1971, she has taught five foreign languages to students of all ages in New York, France, California, and Japan. Her credentials include an M.A. in French and B.A. in Romance Languages/Secondary Education (Queens College, CUNY), a D.U.E.L. (l'Universit de Reims, France), a Certificate in TESOL (UCLA), and many years evaluating international essays for Educational Testing Service. Having learned eight languages, Professor Wolownick knows what one needs to know in order to acquire language.

### **NFPA 90B, Standard for the Installation of Warm Air Heating and Air-Conditioning Systems, 2018 Edition**

This was my first book and a true labor of love. I spent decades studying steam and the work of Dead Men,

in both old buildings and on library shelves. I traveled the country, haunting used-book stores, looking for engineering books that held the answers to questions that nagged at me. I was obsessed with this topic, and when I finally sat to write, I poured all that I had learned into this book, and as I wrote, I tried my best to make the words sound good to you - like we were together and having a conversation. I wanted you to know what I know and I wanted you to be able to do what I can do when it comes to old steam systems. This book arrived in 1992 and has since gone through dozens of printings. We've sold it in every state as well as in foreign countries. Steam heat is everywhere there are old buildings, so why shouldn't you be the one with the answers? Dan Holohan

Queering Narratives of Domestic Violence and Abuse

The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractor of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads to determine space air delivery requirements. This procedure matches duct

system resistance (pressure drop) to blower performance (as defined by manufacturer's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor, or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material.

Modern Refrigeration and Air Conditioning provides an excellent blend of theory with job-qualifying skills, making it a leader in the refrigeration and air conditioning field! This comprehensive text teaches both fundamental principles and the service techniques needed to diagnose and remedy HVAC problems. Modern Refrigeration and Air Conditioning contains the most recent information

and advances in the field needed to prepare the technician for success in today's world. This edition includes up-to-date material on EPA rules and regulations covering refrigerant recovery, recycling, and reclaiming. Both students and practicing technicians will benefit from the comprehensive approach of this text, which provides a solid and thorough knowledge of all aspects of refrigeration and air conditioning.
