This book is the first to focus on violent and/or 'abusive' behaviours in lesbian, gay, bisexual and/or transgender, non-binary gender or genderqueer people's intimate relationships. It provides fresh empirical data from a comprehensive mixed-methods study and novel theoretical insights to destabilise and queer existing narratives about intimate partner violence and abuse (IPVA). Key to the analysis, the book argues, is the extent to which Michael Johnson's landmark typology of IPVA can be used to make sense of the survey data and accounts of 'abusive' behaviours given by LGB and/or T+ participants. As well as calling for IPVA scholars to challenge heteronormativity and cisnormativity and improve IPVA measurement, this book offers guidance and a new tool to assist practitioners from a variety of relationships services with identifying victims/survivors and perpetrators in LGB and/or T+ people's relationships. It will appeal to

academics and practitioners in the field of domestic violence and abuse.?

Je parle francais... un peu: Foundations in Beginning French teaches beginning French in a simple, clear, effective way. Many language textbooks focus solely on grammar, and are exclusively academic in focus. This engaging, interactive textbook makes students comfortable speaking and interacting in the target language, and puts them in charge of their own learning. Based on the premise that students best learn a language by using it to communicate with others rather than relying on technology, Je parle francais... un peu purposely steers students away from CDs, DVDs, and frenetic on-line learning. Instead, the book provides numerous opportunities for students to speak and converse with each other through a variety of activities, such as

dialogues, stories, cultural readings, tongue-twisters, word games, and famous quotes. Also included are les Conversations fran aises, which are in-class skits that encourage students to have fun and experiment with the language without feeling intimidated by the need to be grammatically perfect. The book is concise, containing only the amount of material that can be covered in a one-semester course. Tear-out worksheets are built into the text, which are perfect for homework assignments or additional practice, thus making it unnecessary to buy a supplemental workbook for the course. The tone of the book is un-intimidating, and conversational. The ten chapters of the book teach the language through high-interest topics including college life and personal technology. Extensively class-tested, the material in Je parle francais... un peu gives students what they need

to successfully master written and spoken French at the beginning level. Je parle français... un peu is written for French 1 and 2 at the community college or lower division university level. It can also be used in Beginning French at the high school level. Dierdre Wolownick is Professor of French, Spanish, and ESL/EFL at American River College, Sacramento, CA. HVAC Training 101 is a site visited by over 100,000 enthusiasts monthly, who are interested in becoming HVAC technicians. The site initially began as the passion project of a retired HVAC technician. The site quickly gained popularity, building a strong community of aspiring HVAC technicians.

Currently, it is managed by a team of ex-HVAC technicians with decades of experience in the industry. Head over to HVACTraining101.Com to learn more.

We began by writing about how to become certified as an HVAC technician. With rules and certifications varying for each state, it was a

challenging task. We had a few friends in other states help us out, but for some states, we had to dig really deep to find the information needed. Our audience at the time was very happy with the information we provided. At this point, we started getting many questions about EPA 608 certification. Once you get the education and experience needed to become a technician, prospective employers will ask for certification to handle refrigerants. When we started writing about how to become certified, viewers again requested we write a study guide to help them prepare for the 608 exams. The study guides out there were dense and had much more information than was needed to pass the

test. This inspired us to embark on a journey to write the simplest study guide for the EPA 608 exam, which would still cover all the necessary information. We hope we have achieved our intended objective. The journey to becoming an HVAC technician can be long and arduous. We congratulate you on taking this path and wish you the best in cracking the EPA 608 exam.

The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacture's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the

operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor), or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material.

Bluffs of the Arkansas Ozarks

This was my first book and a true labor of love. I spent decades studying steam and the work of Dead Men, in both old buildings and on library shelves. I traveled the country, haunting used-

book stores, looking for engineering books that held the answers to questions that nagged at me. I was obsessed with this topic, and when I finally sat to write, I poured all that I had learned into this book, and as I wrote, I tried my best to make the words sound good to you - like we were together and having a conversation. I wanted you to know what I know and I wanted you to be able to do what I can do when it comes to old steam systems. This book arrived in 1992 and has since gone through dozens of printings. We've sold it in every state as well as in foreign countries. Steam heat is everywhere there are old buildings, so why shouldn't you be the one with the answers? Dan
