This book provides a comprehensive review of the current knowledge on writing and publishing scientific research papers and the social contexts. It deals with both English and non-Anglophone science writers, and presents a global perspective and an international focus. The book collects and synthesizes research from a range of disciplines, including applied linguistics, the sociology of science, sociolinguistics, bibliometrics, composition studies, and science education. This multidisciplinary approach helps the reader gain a solid understanding of the subject. Divided into three parts, the book considers the context of scientific papers, the text itself, and the people involved. It explains how the typical sections of scientific papers are structured. Standard English scientific writing style is also compared with science papers written in other languages. The book discusses the strengths and challenges faced by people with different degrees of science writing expertise and the role of journal editors and reviewers.

The MLA Style Manual has been the

standard guide for graduate students, teachers, and scholars in the humanities and for professional writers in many fields. The second edition contains several added sections and updated guidelines on citing electronic works -- including materials found on the World Wide Web. There is an expanded chapter on the publication process, from manuscript to published work, and advice for those seeking to publish their articles or books. A chapter by the attorney Arthur F. Abelman reviews legal issues, such as copyright law, the concept of fair use, the provisions of a typical publishing contract, defamation, and the emergence of privacy law. Other chapters discuss stylistic conventions and the preparation of manuscripts, theses, and dissertations and offer an authoritative and comprehensive presentation of MLA documentation style.

George Orwell set out 'to make political writing into an art', and to a wide extent this aim shaped the future of English literature -- his descriptions of authoritarian regimes helped to form a new vocabulary that is fundamental to understanding totalitarianism. While 1984 and Animal Farm are amongst the most popular classic novels in the English language, this new series of Orwell's essays seeks to bring a wider selection of his writing on politics and literature to a new readership. In Politics and the English Language, the second in the Orwell's Essays series, Orwell takes aim at the language used in politics, which, he says, 'is designed to make lies sound truthful and murder respectable, and to give an appearance of solidity to pure wind'. In an age where the language used in politics is constantly under the microscope, Orwell's Politics and the English Language is just as relevant today, and gives the reader a vital understanding of the tactics at play.

For those who teach students in psychology, education, and the social sciences, the Handbook of Demonstrations and Activities in the Teaching of Psychology, Second Edition provides practical applications and rich sources of ideas. Revised to include a wealth of new material (56% of the articles are new), these invaluable reference books contain the collective experience of teachers who have successfully dealt with students' difficulty in mastering important concepts about human behavior. Each volume features a table that lists the articles and identifies the primary and

secondary courses in which readers can use each demonstration. Additionally, the subject index facilitates retrieval of articles according to topical headings, and the appendix notes the source as it originally appeared in Teaching of Psychology--especially useful for users needing to cite information. The official journal of the Society for the Teaching of Psychology, Division Two of the American Psychological Association, Teaching of Psychology is a highly respected publication devoted to improving teaching and learning at all educational levels. Volume II consists of 99 articles about teaching physiology, perception, learning, memory, and developmental psychology. Divided into eight sections (four devoted to developmental psychology and one for each of the other specialties), the book suggests ways to stimulate interest, promote participation, collect data, structure field experience, and observe and interact with patients.

Teaching large classes is a fact of life for professors at many institutions. In addition to pedagogy, instructors of these courses must also be concerned with legal, ethical, financial, technological, personnel, and management issues. Virtually all introductory courses are large ones, as are the popular intermediate courses at large institutions. Typically, little or no training or instruction is provided to new professors about how to manage large classes successfully. This book is a valuable resource for any college teacher, adjunct or full-time, facing a large class. It will also be useful for college administrators who might want to issue it to teachers, especially adjuncts, assigned to large classes for the first time. A distillation of years of experience by the author?who started his college teaching career in 1969?in teaching large classes and in coaching other professors to do the same, this guide is concise and user-friendly. It employs teaching-as-acting as a common theme, with many practical examples covering all of the major aspects of organizing, managing, and teaching a large lecture course in any field. The volume discusses state-of-the-art research works on incorporating artificial intelligence models like deep learning techniques for intelligent sentiment analysis applications. Emotions and sentiments are emerging as the most important human factors to understand the prominent user-generated semantics and perceptions from the humongous volume of user-generated data. In this scenario, sentiment analysis emerges as a significant breakthrough technology, which can automatically analyze the human emotions in the data-driven applications. Sentiment analysis gains the ability to sense the existing voluminous unstructured data and delivers a real-time analysis to efficiently automate the business processes.

Writing and Publishing Science Research Papers in English

Mastery of quality health care and patient safety begins as soon as we open the hospital doors for the first time and start acquiring practical experience. The acquisition of such experience includes much more than the development of sensorimotor skills and basic knowledge of sciences. It relies on effective reason, decision making, and communication shared by all health professionals, including physicians, nurses, dentists, pharmacists, and administrators. How to Think in Medicine, Reasoning, Decision Making, and Communications in Health Sciences is about these essential skills. It describes how physicians and health professionals reason, make decision, and practice medicine. Covering the basic considerations related to clinical and caregiver reasoning, it lays out a roadmap to help those new to health care as well as seasoned veterans overcome the complexities of working for the well-being of those who trust us with their physical and mental health. This book provides a step-by-step breakdown of the reasoning process for clinical work and clinical care. It examines both the general and medical ways of thinking, reasoning, argumentation, fact finding, and using evidence. It explores the principles of formal logic as applied to clinical problems and the use of evidence in logical reasoning. In addition to outline the fundamentals of decision making, it integrates coverage of clinical reasoning

risk assessment, diagnosis, treatment, and prognosis in evidence-based medicine. Presented in four sections, this book discusses the history and position of the problem and the challenge of medical thinking; provides the philosophy interfacing topics of interest for health sciences professionals including the probabilities, uncertainties, risks, and other quantifications in health by steps of clinical work; decision making in clinical and community health care, research, and practice; Communication in clinical and community care including how to write medical articles, clinical case studies and case reporting, and oral and written communication in clinical and community practice and care.
