paper notes that the

problems involved in

preparing

acetylaminoacyl-tRNA

are similar to those

found in peptidyl-

tRNA synthesis, in

particular, to the

lability of the ester

bond between the

amino acid and the

tRNA. Another paper

explains a new method

that will attach

fluorescent dyes to

cytidine residues in tRNA; it also notes the possible use of N-hydroxysuccinimide esters of dansylglycine and N-methylantranilic acid in the described method. One paper explains the use of membrane filtration in the determination of apparent association constants for ribosomal protein-RNS complex formation. This collection is valuable to biochemists, cellular biologists, microbiologists, developmental biologists, and investigators working with enzymes.

DNA GENES CHANGDER

OUTLINE

The classic personal account of Watson and Crick's groundbreaking discovery of the structure of DNA, now with an introduction by Sylvia Nasar, author of *A Beautiful Mind*. By identifying the structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of

the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick's desperate efforts to beat Linus Pauling to the Holy Grail of life sciences, the identification of the basic building block of life.

Never has a scientist been so truthful in capturing in words the flavor of his work.
