Practical guide for lift directors, lift planners, rigging engineers, site superintendents, field engineers, rigging foremen, heavy lift managers, heavy haul planners, crane operators, and advanced riggers

Hydraulic System Cleanliness McGraw-Hill Companies

This new volume provides a comprehensive overview of thermal and nonthermal processing of food with new and innovative technologies. Recent innovations in thermal as well as nonthermal technologies, which are specifically applied for potable water and fluid foods (milk, juice, soups, etc.), are well documented for their high bioavailability of macro- and micronutrients and are very promising.

This volume brings together valuable information on fluid and microbial characteristics and quality dynamics that facilitate the adoption of new technology for food processing. Some new technologies and methods covered include the application of microwaves in heating, drying, pasteurization, sterilization, blanching, baking, cooking, and thawing; microwave-assisted extraction of compounds; using low-electric fields; alternation of temperature and pressure of supercritical carbon dioxide; ultrasound-assisted osmotic dehydration; hydrodynamic cavitation; high-pressure processing; gamma-irradiation; and more.

The nonthermal technologies discussed have been developed as an alternative to thermal processing while still meeting required safety or shelf-life demands and minimizing the effects on nutritional and quality attributes. New York Construction Law Manual Hassell Street Press

Animal disease outbreaks pose many challenges for response authorities that can impact livelihoods, food security, and the environment. Proper disposal of animal carcasses that die or are culled during the outbreak is a key component of a successful response to a disease outbreak because it helps prevent or mitigate the further spread of pathogens and in case of zoonotic disease, to further protect human health. The practical guidelines presented hereby provide carcass and related waste management considerations and recommended procedures for use by Veterinary Services and other official response authorities when developing animal disease outbreak containment and eradication plans. The guidelines apply to animal disease outbreaks of varying sizes, whether the outbreak is isolated to a single premise or spans a region to cover numerous premises. However, they are focused on small to medium-sized holdings in countries without access to engineered landfills, rendering plants or controlled incinerators. The guidelines are written in the spirit of "keep it simple and doable", considering the limited human and financial resources that many countries are constrained with. Its presentation and practical approach ensure that countries will find it very useful for their emergency operation procedures toolbox. Further, the guidelines directly contribute to the one-health approach by protecting the health of animals, humans, and the environment. [How To Depreciate Property - Publication 946 \(For Use in Preparing 2019 Returns\)](#) CRC Press

This book aims to provide useful tips for the

understanding of scientific research processes and practical advice for people engaged in this field. It is a reflection of the author's more than 40 years of experience in medical and cancer research, and is written in a colloquial style to reach not only the young audience who are considering devoting their lives to biomedical research, but also to those who are already engaged in this field. The author emphasizes the unique traits and qualifications required for performing scientific research and also describes the different modalities which can be performed in our actual scientific environment. There are numerous practical advices in this book, such as guidelines on writing a grant proposal and the first peer-reviewed manuscript, the selection criteria of the training laboratory and mentors, as well as keeping records of experimental data. The author also provides his insight on the personal inner drive and motivation critical for conducting scientific research, as well as the importance of working on a problem without losing the human perspective of this specific and unique human endeavor.

Cranes and Derricks

Stories in Itinerary XIII of Cruise through History travel from West Africa in Senegal, along the coast to South Africa and Mozambique, across the Indian Ocean islands to Sri Lanka, and to India, then across Southeast Asia to Vietnam. Across the modern nations, products of the twentieth century, there are themes common to all, though peoples are varied. The theme that joins is the search for, and restoration of, cultural identity. In appreciation of culture, too long co-opted, this volume of stories goes within cultures, to present history and culture from the perspective of the host country. To travel is to learn. Malaysia built a successful nation and dynamic economy by first defining who is Malay. To do so meant jettisoning the island of Singapore, overwhelmingly culturally Chinese. Singapore capitalized on its strength by unifying its people and promising First World lifestyle if they would heave to a common goal. Thailand's identity was the product of a brilliant king, who created the concept of national Thai from people with languages so diverse, they did not understand each other. Loss of culture and cultural icons in Cambodia left the country bereft. So many problems plaguing West African nations today stem from loss of culture, land, people and resources. Reclaiming identity is critical. Primary to each story is an introduction to culture of the people. The list of peoples of this itinerary is long. So too, is the list of World Heritage Sites, attempts to preserve and promote cultural identity by support for remaining cultural icons. The oldest cultures in human existence are in Africa. The story of West Africa begins in three parts, the first West Africa to 1500, prior to European impact, is the story of cultural development of kingdoms of power and beauty. Bushmen of Southern Africa carry the basic gene of humanity and a life in tune with a harsh environment. In the stories of the Indian Ocean is the Story of the Eastern Sea. The story of People of Southeast Asia is an attempt to follow human migration to understand the origin of people, groups, now nations. Slavery and colonialism are common themes throughout these stories. Slavery existed prior to European impact, as a means to vanquish enemies, and obtain labor, a scarce resource, necessary to build great kingdoms. Slavery in the pre-European sense was fluid. Slaves often melded into the dominant society. In contrast, European style slavery depopulated communities, dissipated historic kingdoms, and deprived national development by loss of its people. That is Part II of the story of West Africa. The lesser known story of West Africa is Part III Colonialism.

Colonialism in these stories is a scheme that keeps people in place and harvests the resources for the benefit of the colonizer. Trade among peoples built cities and kingdoms in Ivory Coast and Gold Coast Ghana, Mozambique, Sri Lanka and kingdoms of Myanmar, Up the Irrawaddy - Yangon to Mandalay. Colonialism displaced governments, local economies, and most important, cultural identity. The political map of Africa was created in a meeting room in Germany, where nations of Europe staked claims to real estate, with no relevance to cultures. Portugal, Spain, the Dutch, Britain and France came for trade and stayed to colonize. When colonialism ebbed, in recent history, the extent to which the colonizer developed physical and governmental infrastructure played a role in success of a young nation. France, never profiting from a colony, brought peace to Cambodia, for the first time in its history, yet created a thirty year war in Vietnam, through intransience and refusal to work with the developing country as a mentor. In Africa stories include the Golden Stool, and meaning of Kente Cloth. In India the story is the Jewel in the Crown and story of diamonds. Success of India and Sri Lanka to emerge strong from colonialism is based retaining richness of culture.

Cal/OSHA Pocket Guide for the Construction Industry

The Cal/OSHA Pocket Guide for the Construction Industry is a handy guide for workers, employers, supervisors, and safety personnel. This latest 2011 edition is a quick field reference that summarizes selected safety standards from the California Code of Regulations. The major subject headings are alphabetized and cross-referenced within the text, and it has a detailed index. Spiral bound, 8.5 x 5.5"

Adam Smith [microform]; an Oration
Nicholas Perrot was a French-Canadian explorer who played a key role in the history of Wisconsin. This book provides a detailed biography of Perrot and examines his interactions with Native American tribes in the region, as well as his involvement in the fur trade. Stickney's analysis sheds light on the complex cultural and economic forces that shaped Wisconsin in the seventeenth and eighteenth centuries. This is a valuable resource for students and scholars of American colonial history and Native American studies. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it.
