Nowadays, the Internet has become an irreplaceable tool, feeding us information about new innovations and the evolution of the markets relating to all human activities. What the Internet lacks, though, is a guiding narrative thread, which is crucial to understand the evolution from old technologies into the technologies available today, and to benefit from the commentary which could elucidate that process of evolution. In spite of its inherent richness, no encyclopedia can constitute the one and only referential information source. The actors involved also have the right to be heard: all those who have devoted their working lives to the collective effort of edifying networks can, of course, present their personal views about the evolution of the world of telecommunications, and thus provide invaluable testimony to companies in this area who can make use of it. It is that approach which is adopted in this book. Whilst the primary objective of this book is to encourage SMEs to use digital technologies, and help them to organize with that goal in mind, it has proved necessary to describe the transformations currently under way in the field of networks, and to outline the efforts to obtain a competitive edge in terms of clerical applications, compare the various techniques that are available for high data rate communications, and touch upon the advent of the " Internet of Things " , cloud computing and various new multimedia technologies. All in all, this book should help companies – particularly SMEs – to garner overall information about the current movement in the area of networking, and assist them in putting in place and managing their own communications systems.

The Business of Systems Integration IGI Global

This volume aims to provide the reader with a broad cross-section of empirical research being carried out into engineers at work. The chapters provide pointers to other relevant studies over recent decades – an important aspect, we believe, because this area has only recently begun to coalesce as a field of study and up to now relevant empirical research has tended to be published across a range of academic disciplines. This lack of readily available literature might explain why contemporary notions of engineering have drifted far from the realities of practice and are in urgent need of revision. The principal focus is on what empirical studies tell us about the social and technical aspects of engineering practice and the mutual interaction between the two. After a foreword by Gary Lee Downey, the research presented by the various chapter authors is based on empirical data from studies of engineers working in a variety of global settings that include Australia, Ireland, Portugal, South Asia, Switzerland, the UK and the US The following groups of readers are addressed: •researchers and students with an interest in engineering practice, •professional engineers, particularly those interested in research on engineering practice, •engineering educators, •people who employ, recruit or work with engineers. Providing a much clearer picture of engineering practice and its variations than has been available until now, the book is of interest to engineers and those who work with them. At the same time it provides invaluable resource material for educators who are aiming for more authentic learning experiences in their classrooms. This is the first book to establish a theoretical framework for commercial management. It argues that managing the contractual and commercial issues of projects – from project inception to completion – is vital in linking operations at the project level and the multiple projects (portfolios/ programmes) level to the corporate core of a company. The book focuses on commercial management within the context of project oriented organisations, for example: aerospace, construction, IT, pharmaceutical and telecommunications – in the private and public sectors. By bringing together contributions from leading researchers and practitioners in commercial management, it presents the state-of-the-art in commercial management covering both current research and best practice. *Commercial Management of Projects*: defining the discipline covers the external milieu (competition, culture, procurement systems); the corporate milieu (corporate governance,

strategy, marketing, trust, outsourcing); the projects milieu (management of uncertainty, conflict management and dispute resolution, performance measurement, value management); and the project milieu (project governance, contract management, bidding, purchasing, logistics and supply, cost value reconciliation). Collectively the chapters constitute a step towards the creation of a body of knowledge and a research agenda for commercial management.

Transforming European Militaries Springer Nature

A unique look at European Network Enabled Capabilities (NEC) and their implications for transatlantic co-operation in future operations. Gordon Adams and Guy Ben-Ari identify the key requirements for improvement of Europe's abilities as an international actor. They focus on national and collaborative, as well as existing and planned, networks. They clearly show the reader how, with the removal of the risks of Soviet invasion, European defence planners must now modify their strategies and capabilities to address new threats, both at home and overseas. They also show why future operations within international coalitions will require network-based capabilities that can interoperate. Europe possesses a technological and industrial base adequate to supply such capabilities, and its defence strategies are gradually being modified to emphasize expeditionary forces operations within coalition settings. However, much remains to be done. This volume tackles the key challenges facing European nations who need to operate alongside each other and with their North American allies more effectively and efficiently. This book will be of great interest to all students of European affairs and politics, international relations and military and strategic studies.

This book constitutes the refereed proceedings of the 7th International Conference on Mathematical Methods, Models, and Architectures for Computer Network Security, MMM-ACNS 2017, held in Warsaw, Poland, in August 2017. The 12 revised full papers, 13 revised short presentations, and 3 invited papers were carefully reviewed and selected from a total of 40 submissions. The papers are organized in topical sections on Critical Infrastructure Protection and Visualization; Security and Resilience of Network Systems; Adaptive Security; Anti-malware Techniques: Detection, Analysis, Prevention; Security of Emerging Technologies; Applied Cryptography; New Ideas and Paradigms for Security.

Strategy, Leadership and AI in the Cyber Ecosystem investigates the restructuring of the way cybersecurity and business leaders engage with the emerging digital revolution towards the development of strategic management, with the aid of AI, and in the context of growing cyber-physical interactions (human/machine co-working relationships). The book explores all aspects of strategic leadership within a digital context. It investigates the interactions from both the firm/organization strategy perspective, including cross-functional actors/stakeholders who are operating within the organization and the various characteristics of operating in a cyber-secure ecosystem. As consumption and reliance by business on the use of vast amounts of data in operations increase, demand for more data governance to minimize the issues of bias, trust, privacy and security may be necessary. The role of management is changing dramatically, with the challenges of Industry 4.0 and the digital revolution. With this intelligence explosion, the influence of artificial intelligence technology and the key themes of machine learning, big data, and digital twin are evolving and creating the need for cyber-physical management professionals. Discusses the foundations of digital societies in information governance and decision-making
Explores the role of digital business strategies to deal with big data management, governance and digital footprints
Considers advances and challenges in ethical management with data privacy and transparency
Investigates the cyber-physical project management professional [Digital Twin] and the role of Holographic technology in corporate decision-making

Over the past decade or so, systems integration has become a key factor in the operations, strategy and competitive advantage of major corporations in a wide variety of sectors (e.g. computing, automotive, telecommunications, military systems and aerospace). Systems integration is a strategic task that pervades business management not only at the technical level but also at the management and strategic levels. This book shows how and why this new kind of systems integration has evolved into an emerging model of industrial organization whereby firms, and groups of firms, join together different types of knowledge, skill and activity, as well as hardware, software, and human resources to produce new products for the marketplace. This book is the first to systematically explore systems integration from a business and innovation perspective. Contributors delve deeply into the nature, dimensions and dynamics of the new systems integration, deploying research and analytical techniques from a wide variety of disciplines including, the theory of the firm, the history of technology, industrial organization, regional studies, strategic management, and innovation studies. This wealth of research capability provides deep insights into the new model of systems integration and supports this with an abundance of empirical evidence. The book is organized in three main parts. The first part focuses on the history of systems integration. Contributors trace the early history of systems integration using different industrial examples. The second part presents theoretical and analytical aspects of systems integration. Contributions concentrate on the regulatory and cognitive features of systems integration, the relationships between systems integration and regional competitive advantage, and the way in which systems integration supports the competitive advantage of firms. The third part takes industry and firm-level approaches. Contributions

focus on different sectors and highlight the specificity of systems integration in various industrial domains, stressing its importance for systems integration in the case of complex capital goods, such as aircraft and telecommunications equipment, as well as consumer goods, such as personal computers and automobiles.

This book covers IoT and Big Data from a technical and business point of view. The book explains the design principles, algorithms, technical knowledge, and marketing for IoT systems. It emphasizes applications of big data and IoT. It includes scientific algorithms and key techniques for fusion of both areas. Real case applications from different industries are offering to facilitate ease of understanding the approach. The book goes on to address the significance of security algorithms in combing IoT and big data which is currently evolving in communication technologies. The book is written for researchers, professionals, and academicians from interdisciplinary and transdisciplinary areas. The readers will get an opportunity to know the conceptual ideas with step-by-step pragmatic examples which makes ease of understanding no matter the level of the reader.

Your business reputation can take years to build—and mere minutes to destroy The range of business threats is evolving rapidly but your organization can thrive and gain a competitive advantage with your business vision for enterprise risk management. Trends affecting markets—events in the global financial markets, changing technologies, environmental priorities, dependency on intellectual property—all underline how important it is to keep up to speed on the latest financial risk management practices and procedures. This popular book on enterprise risk management has been expanded and updated to include new themes and current trends for today's risk practitioner. It features up-to-date materials on new threats, lessons from the recent financial crisis, and how businesses need to protect themselves in terms of business interruption, security, project and reputational risk management. Project risk management is now a mature discipline with an international standard for its implementation. This book reinforces that project risk management needs to be systematic, but also that it must be embedded to become part of an organization's DNA. This book promotes techniques that will help you implement a methodical and broad approach to risk management. The author is a well-known expert and boasts a wealth of experience in project and enterprise risk management Easy-to-navigate structure breaks down the risk management process into stages to aid implementation Examines the external influences that bring sources of business risk that are beyond your control Provides a handy chapter with tips for commissioning consultants for business risk management services It is a business imperative to have a clear vision for risk management. Simple Tools and Techniques for Enterprise Risk Management, Second Edition shows you the way.

This report recognises the efforts of the Ministry of Defence (MoD) to improve the methods by which intelligence is collected, interpreted and

then disseminated over the battlefield, where it can be used to best effect - a process known as ISTAR (Intelligence, Surveillance, Target Acquisition and Reconnaissance). However there are fears that plans for the development of ISTAR capability might be put to one side or slowed during the process of the Strategic Defence Review, due largely to financial constraints. The report warns that control of such a vital resource as ISTAR needs to be clarified to ensure proper coordination and development across the Services. The Committee has been impressed by the commitment within the MoD, the Armed Forces and within industry to improve detection of Improvised Explosive Devices (IEDs) as a priority, and to work creatively and co-operatively to that end. The technologies and techniques refined during the current campaign in Afghanistan must be mainstreamed into future UK ISTAR capability. However the theoretical expectations of what ISTAR can contribute to minimising civilian and UK military casualties must be kept in proportion. Realism about the nature of asymmetric warfare, and what ISTAR can contribute, is essential if current and future missions are to succeed.

Strategy, Leadership, and AI in the Cyber Ecosystem Springer

Expanding on the editors' award-winning article "Evolving to a New Dominant Logic for Marketing," this book presents a challenging new paradigm for the marketing discipline. This new paradigm is service-oriented, customer-oriented, relationship-focused, and knowledge-based, and places marketing, once viewed as a support function, central to overall business strategy. Service-dominant logic defines service as the application of competencies for the benefit of another entity and sees mutual service provision, rather than the exchange of goods, as the proper subject of marketing. It moves the orientation of marketing from a "market to" philosophy where customers are promoted to, targeted, and captured, to a "market with" philosophy where the customer and supply chain partners are collaborators in the entire marketing process. The editors elaborate on this model through an historical analysis, clarification, and extension of service-dominant logic, and distinguished marketing thinkers then provide further insight and commentary. The result is a more comprehensive and inclusive marketing theory that will challenge both current thinking and marketing practice.

This book provides a comprehensive overview of recent developments in network dynamics and control with applications to supply chains, manufacturing and logistics systems. It systemizes these developments in the form of new taxonomies and methodological principles to shape the research domain of supply network dynamics control. Uniquely, the book links the fundamentals of control and system theories and artificial intelligence with supply chain and operations management. It addresses the needs of researchers and practitioners alike, revealing the challenges and opportunities of supply chain and operations management by means of dynamic system analysis.

Use of big data has proven to be beneficial within many different

industries, especially in the field of engineering; however, infiltration of this type of technology into more traditional heavy industries, such as the railways, has been limited.

Innovative Applications of Big Data in the Railway Industry is a pivotal reference source for the latest research findings on the utilization of data sets in the railway industry. Featuring extensive coverage on relevant areas such as driver support systems, railway safety management, and obstacle detection, this publication is an ideal resource for transportation planners, engineers, policymakers, and graduate-level engineering students seeking current research on a specific application of big data and its effects on transportation.

In this edition, we have featured the developments about the Lucknow Metro which celebrated its anniversary recently. Our scope is very genuine and we are hopeful that this magazine will surely be able to connect different stakeholders of the Metro and Rail sectors. Although we haven't much focused on the traditional Rail networks, we continue to provide a deep insight into the developments of the new Rail technologies and the changes which make the sector fast-growing. We have covered the interviews of Kumar Keshav, Managing Director, UPMRC and Anil Munjal, CEO, Riello Power India. The two people have made a huge success in their respective fields and we have brought the insights directly from the industry.
