The STM32F103 microcontroller from ST is one of the widely used ARM microcontrollers. The blue pill board is based on STM32F103 microcontroller. It has a low price and it is widely available around the world. This book uses the blue pill board to discuss designing embedded systems using STM32F103. In this book, the authors use a step-by-step and systematic approach to show the programming of the STM32 chip. Examples show how to program many of the STM32F10x features, such as timers, serial communication, ADC, SPI, I2C, and PWM. To write programs for Arm microcontrollers you need to know both Assembly and C languages. So, the text is organized into two parts: 1) The first 6 chapters cover the Arm Assembly language programming. 2) Chapters 7-19 uses C to show the STM32F10x peripherals and I/O interfacing to real-world devices such as keypad, 7-segment, character and graphic LCDs, motor, and sensor. The source codes, power points, tutorials, and support materials for the book is available on the following website: <http://www.NicerLand.co> Using Assembly and C for Pic18 Pearson Higher Ed CD-ROM contains: Source code in 'C' for patterns and examples -- Evaluation version of the industry-standard Keil 'C' compiler and hardware simulator.

C and the 8051: Hardware, modular programming, and multitasking CRC Press

This book has been written for a diverse audience, primarily for those who work in the area of the electronic design and assembly language programming of small, dedicated computers. An extensive knowledge of electronics is not required to program the microcontroller. A microcontroller is a true computer on a chip, incorporating all the features found in a microprocessor CPU. A microcontroller is a general-purpose device, but one which is meant to fetch data, perform limited calculations on that data, and control its environment based on those calculations. The prime use of a microcontroller is to control the operation of a machine using a fixed program that is stored in ROM and that does not change over the lifetime of the system.
