In case of linear design, we do not check for anything greater than the capacity of the member. But in nonlinear analysis we do monitor the rotations of the member and make sure that they are...

Analysis and Design of Linear Circuits (2015 edition ...

Linear static analysis is a design approach where equivalent static story forces, due to wind or earthquakes, are applied to the structure. The computation of story forces is prescriptive, and formulations for calculating these forces are provided within the applicable building code (Section 5.1.1). Linear static analysis is typically restricted to use in regular structures, where dynamic behavior is dominated by the fundamental mode of vibration, without significant higher modes and torsion ...
