The Bees of the World. In this extensive update of his definitive reference, Charles D. Michener reveals a diverse fauna that numbers more than 17,000 species and ranges from the common honeybee to rare bees that feed on the pollen of a single type of plant.

Bee population has been on a decline in recent years. Some species were added to the endangered list in 2017 (seven species of Hawaiian yellow-faced bees) and 2018 (The rusty-patched bumblebee, *Bombus affinis*) so as to protect and revive their numbers. There have been a number of reasons for this decline. Let ' s take a look at few of them.

The Bees of the World begins with extensive introductory sections that include bee evolution, classification of the various bee families, the coevolution of bees and flowering plants, nesting behavior, differences between solitary and social bees, and the anatomy of these amazing insects. Drawing on modern studies and evidence from the fossil record, Michener reveals what the ancestral bee-the protobee-might have looked like.
