As of 2017, 55 percent of American households included at least one pet. Pets are ubiquitous and often considered part of the family, but are they content in a domestic setting? Is there a way for us to tell if we are giving pets a suitable standard of living?

Many factors must be considered

when looking at the ethics of pet ownership, including what rights animals should possess, where the animals come from, and what species of animals should be kept as pets. Readers will gain a better understanding of the many ethical considerations surrounding pet ownership.

Tempting the Beast Cambridge University Press

Morie Sawataishi lives a life that is radically unconventional by any standard but almost absurd in blatantly conformist Japan.

Journalist Martha Sherrill provides a profound look at what it takes to be an individualist in a culture where rebels are rare.

A uniquely personal meditation on Britain's gulls by one

of today's leading wildlife writers. From a distance, gulls are beautiful symbols of freedom over the oceanic wilderness. Up close, however, they can be loud, aggressive and even violent. Yet gulls fascinate birdwatchers, and seafarers regard them with respect and affection. *The Gull Next Door* explores the natural history of gulls and their complicated relationship with humans. Marianne Taylor grew up in an English seaside town where gulls are ever present. Today, she is a passionate advocate for these underappreciated birds. In this book, Taylor looks at the different gull species and sheds light on all aspects of the lives

of gulls—how they find food, raise families, socialize and migrate across sea, coastland and countryside. She discusses the herring gull, Britain's best-known and most persecuted gull species, whose numbers are declining at an alarming rate. She looks at gulls in legend, fiction and popular culture, and explains what we can do to protect gull populations around the world. *The Gull Next Door* reveals deeper truths about these remarkable birds. They are thinkers and innovators, devoted partners and parents. They lead long lives and often indulge their powerful drive to explore and travel. But for all these natural gifts, many gull species are struggling to survive

in the wild places they naturally inhabit, which is why they are now exploiting the opportunities of human habitats. This book shows how we might live more harmoniously with these majestic yet misunderstood birds.

Breeding Stud Sheep shows
how to establish and manage a
successful sheep stud. All
aspects of stud breeding are
covered, including where and
how to buy your sheep,
selecting the right breeding
stock for your stud, flock
management, nutrition,
disease control, lambing
problems, showing sheep,
promotion and marketing, and

selling stud genetics. The detailed step-by-step strategies will give the reader the ability to develop alternative approaches that best suit their situation. It also explains how new initiatives such as performance recording, DNA testing and modern reproductive techniques can be integrated with the old, time-honoured traditions of sheep breeding. Profiles of highly recognised stud breeders are included, detailing how they started and the strategies they have used to grow their stud sheep operations over many years. This book will help new breeders avoid the pitfalls and mistakes that can occur when starting a new stud venture, and show how to succeed in what is ultimately a tough but very rewarding industry.

Callan Lyons is a genetic experiment. One of six fighting for freedom and the survival of

their Pride. Merinus Tyler is the reporter who will tempt him, draw him, until the fury of the "mating frenzy" locks them into a battle of sexual heat there is no escape from. Deception, blood, and the evil Genetics Council are hot on their trail. Callan will use his strength to try and save them both...and do all in his power to keep his woman in the process. Cattle, Breeds and Management Penguin

In the first book of her erotic new series, Lora Leigh invites you to an intriguing world where genetically altered Breeds and the humans who created them commingle—and sometimes cross the boundaries of desire... Cursed with the extraordinary power to feel other peoples' emotions, Megan Fields has tucked herself away in a remote corner of New Mexico, working as a small-town sheriff's deputy. She finds solace in the silence and heat of the desert. But when Breeds begin dying on her watch, Megan realizes that the secrets from her past can't stay buried forever. Someone is out for blood—her blood. An arrogant Feline Breed,

Braden Arness broods with feral intensity. His mission to solve the mysterious murders brings him to Megan, a woman who accosts his senses like no other. Only with him can she let down her guard—and surrender to the insatiable hunger that wracks her body. But as they team up to hunt the elusive killers, Braden and Megan find themselves becoming the prey...

Cooperative breeders are species in which more than a pair of individuals assist in the production of young.

Cooperative breeding is found in only a few hundred bird species world-wide, and understanding this often strikingly altruistic behaviour has remained an important challenge in behavioural ecology for over 30 years. This book highlights the theoretical, empirical and technical advances that have taken place in the field of cooperative breeding research since the publication of the seminal work *Cooperative Breeding in Birds: Long-term Studies of Behavior and Ecology* (1990, HB ISBN 0521 372984, PB ISBN 0521 378907).

Organized conceptually, special attention is given to ways in which cooperative breeders have proved fertile subjects for testing modern advances to classic evolutionary problems including those of sexual selection, sex-ratio manipulation, life-history evolution, partitioning of reproduction and incest

avoidance. It will be of interest to both students and researchers interested in behaviour and ecology.

House of Earth and Blood **Touchstone**

Cooperative breeding is an unusual kind of social behaviour, found in a few hundred species worldwide, in which individuals other than the parents help raise young. Understanding the apparently altruistic behaviour of helpers has provided numerous challenges to evolutionary biologists. This book includes detailed first-hand summaries of many of the major empirical studies of cooperatively breeding birds. It provides comparative information on the demography, social behaviour and behavioural ecology of these unusual species and explores the

diversity of ideas and the controversies which have developed in this field. The studies are all long-term and consequently the book summarises some of the most extensive studies of the behaviour of marked individuals ever undertaken. Graduate students and research workers in ornithology, sociobiology, behavioural ecology and evolutionary biology will find much of value in this book.
