The Coding Manual For Qualitative

For disciplines in which a qualitative format is preferential, including ethnography, humanistic geography or phenomenological psychology a varied approach to coding can be applied. Iain Hay (2005) outlines a two-step process beginning with basic coding in order to distinguish overall

themes, followed by a more in depth, interpretive code in which more specific trends and patterns can be interpreted.

The Coding Manual for Qualitative Researchers As defined by Saldana in the Coding Manual for Qualitative Researchers “ A code in qualitative inquiry is most often a word, or a short phrase that symbolically assigns a summative salient essence capturing

and/or evocative attribute for a portion of a language based or visual data.

Data analysis is the most difficult and most crucial aspect of qualitative research. Coding is one of the significant steps taken during analysis to organize and make sense of textual data. This paper examines the use of manual and electronic methods to code data in two rather different projects in which the data were collected mainly by in-depth interviewing.
