an unprecedented synthesis
of the current status of
scientific and management
knowledge regarding global
rangelands and the major
challenges that confront
them. It has been organized
around three major themes.
The first summarizes the
conceptual advances that
have occurred in the
rangeland profession. The
second addresses the
implications of these
conceptual advances to
management and policy. The
third assesses several major
challenges confronting
global rangelands in the 21st
century. This book will
compliment applied range
management textbooks by
describing the conceptual
foundation on which the
rangeland profession is
based. It has been written to
be accessible to a broad
audience, including
ecosystem managers,
educators, students and
policy makers. The content
is founded on the collective
experience, knowledge and

commitment of 80 authors who have worked in rangelands throughout the world. Their collective contributions indicate that a more comprehensive framework is necessary to address the complex challenges confronting global rangelands. Rangelands represent adaptive social-ecological systems, in which societal values, organizations and capacities are of equal importance to, and interact with, those of ecological processes. A more comprehensive framework for rangeland systems may enable management agencies, and educational, research and policy making organizations to more effectively assess complex problems and develop appropriate solutions.
