Human Rights is an introductory text that is both innovative and challenging. Its unique interdisciplinary approach invites students to think imaginatively and rigorously about one of the most important and influential political concepts of our time. Tracing the history of the concept, the book shows that there are fundamental tensions between legal, philosophical and social-scientific approaches to human rights. This analysis throws light on some of the most controversial issues in the field: Is the idea of the universality of human rights consistent with respect for cultural difference? Are there collective human rights? What are the underlying causes of human-rights violations? And why do some countries have much worse human-rights records than others? The third edition has been substantially revised and updated to take account of recent developments, including the ' Arab Spring ', the civil war in Syria, the refugee crisis, ISIS and international terrorism, and climate change politics. Widely admired and assigned for its clarity and comprehensiveness, this

book remains a ' go-to ' text for students in the social sciences, as well as students of human-rights law who want an introduction to the non-legal aspects of their subject.

In an era of privatism, kicks, introversion, and postmodernist nihilism, Murray Bookchin forcefully examines the growing nihilistic trends that threaten to undermine the revolutionary tradition of anarchism and co-opt its fragments into a harmless personalistic, yuppie ideology of social accommodation that presents no threat to the existing powers that be.

Through a body of political and philosophical ideas that he called social ecology, Murray Bookchin (1921-2006) elucidated one of the first intellectual responses to the ecological crisis. According to Bookchin, the causes of our present environmental problems lay in a long history of social domination and exploitation, that only could be remedied by a new liberatory project centered around direct democratic cities, a moral economy and confederalism. However, over the last two decades of his life Bookchin's ideas slipped from focus, obscured by the emergence of a crude caricature of him as a dogmatic sectarian who intended to dominate the radical left for his own personal motivations. In *Recovering Bookchin*, political philosopher Andy Price recounts the debates between Bookchin and the deep ecologists, the anarchists and primitivists, identifying and critically discounting the Bookchin caricature as a body of critique leveled against Bookchin the person rather than his ideas. Price argues that by looking afresh at his work, Bookchin's contribution provides a coherent practical and theoretical response to the ecological and social crises of our time. [Social Ecology and Communalism](#) AK Press Examines the ecological impulse as a "desire for nature."

**The Philosophy of Social Ecology** Farrar, Straus and Giroux

Over the course of a long career, Brian Morris has created an impressive body of engaging and insightful writings—from social anthropology and ethnography to politics, history, and philosophy—that have made these subjects accessible to the layperson without sacrificing analytical rigor. But until now, the essays collected here, originally published in obscure

journals and political magazines, have been largely unavailable to the broad readership to which they are so naturally suited. The opposite of arcane, specialized writing, Morris's work takes an interdisciplinary approach that moves seamlessly among topics, offering up coherent and practical connections between his various scholarly interests and his deeply held commitment to anarchist politics and thought. Approached in this way, anthropology and ecology are largely untapped veins whose relevance for anarchism and other traditions of social thought have only recently begun to be explored and debated. But there is a long history of anarchist writers drawing upon works in those related fields. Morris's essays both explore past connections and suggest ways that broad currents of anarchist thought will have new and ever-emerging relevance for anthropology and many other ways of understanding social relationships. His writings avoid the constraints of dogma and reach across an impressive array of topics to give readers a lucid orientation within these traditions and point to new ways to confront common challenges.

**Toward an Ecological Society** Routledge Today, transparency is a widely heralded value, and the U.S. Freedom of Information Act (FOIA) is often held up as one of the transparency movement's canonical achievements. Yet while many view the law as a powerful tool for journalists, activists, and ordinary citizens to pursue the public good, FOIA is beset by massive backlogs, and corporations and the powerful have become adept at using it for their own interests. Close observers of laws like FOIA have begun to question whether these laws interfere with good governance, display a deleterious anti-public-sector bias, or are otherwise inadequate for the twenty-first century's challenges. Troubling

---

Transparency brings together leading scholars from different disciplines to analyze freedom of information policies in the United States and abroad—how they are working, how they are failing, and how they might be improved. Contributors investigate the creation of FOIA; its day-to-day uses and limitations for the news media and for corporate and citizen requesters; its impact on government agencies; its global influence; recent alternatives to the FOIA model raised by the emergence of “open data” and other approaches to transparency; and the theoretical underpinnings of FOIA and the right to know. In addition to examining the mixed legacy and effectiveness of FOIA, contributors debate how best to move forward to improve access to information and government functioning. Neither romanticizing FOIA nor downplaying its real and symbolic achievements, *Troubling Transparency* is a timely and comprehensive consideration of laws such as FOIA and the larger project of open government, with wide-ranging lessons for journalism, law, government, and civil society.

*From Music to Sound* is an examination of the six musical histories whose convergence produces the emergence of sound, offering a plural, original history of new music and showing how music had begun a change of paradigm, moving from a culture centred on the note to a culture of sound. Each chapter follows a chronological progression and is illustrated with numerous musical examples. The chapters are composed of six parallel histories: timbre, which became a central category for musical composition; noise and the exploration of its musical potential; listening, the awareness of which opens to the generality of sound; deeper and deeper immersion in sound; the substitution of composing the sound for composing with sounds; and space, which is progressively viewed as composable. The book proposes a global overview, one of the first of its kind, since its ambition is to systematically

delimit the emergence of sound. Both well-known and lesser-known works and composers are analysed in detail; from Debussy to contemporary music in the early twenty-first century; from rock to electronica; from the sound objects of the earliest musique concrète to current electroacoustic music; from the *Poème électronique* of Le Corbusier-Varèse-Xenakis to the most recent inter-arts attempts. Covering theory, analysis and aesthetics, *From Music to Sound* will be of great interest to scholars, professionals and students of Music, Musicology, Sound Studies and Sonic Arts.

This book explores how the State can play a role as an enabler of citizens-led social innovations, to accelerate the shift to sustainable and socially just lifestyles. To meet the twin challenges of environmental degradation and the rise of inequalities, societal transformation is urgent. Most theories of social change focus either on the role of the State, on the magic of the market, or on the power of technological innovation. This book explores instead how local communities, given the freedom to experiment, can design solutions that can have a transformative impact. Change cannot rely only on central ordering by government, nor on corporations suddenly acting as responsible citizens. Societal transformation, at the speed and scope required, also should be based on the reconstitution of social capital, and on new forms of democracy emerging from collective action at the local level. The State matters of course, for the provision of both public services and of social protection, and to discipline the market, but it should also act as an enabler of citizen-led experimentation, and it should set up an institutional apparatus to ensure that collective learning spreads across jurisdictions. Corporations themselves can ensure that

---

society taps the full potential of citizens-led social innovations: they can put their know-how, their access to finance, and their control of logistical chains in the service of such innovations, rather than focusing on shaping consumers' tastes or even adapting to consumers' shifting expectations. With this aim in mind, this book provides empirical evidence of how social innovations, typically developed within "niches", initially at a relatively small scale, can have society-wide impacts. It also examines the nature of the activism deployed by social innovators, and the emergence of a "do-it-yourself" form of democracy. This book will appeal to all those interested in driving societal change and social innovation to ensure a sustainable and socially just future for all.

### **The Murray Bookchin Reader** Routledge

At the beginning of the twenty-first century, both the crisis of liberal democracy, as visible in, for example, the rise of far-right actors in Europe and the United States, and environmental crises, from declining biodiversity to climate change, are increasingly in the public spotlight. Whilst both areas have been analysed extensively on their own, *The Far Right and the Environment: Politics, Discourse and Communication* provides much-needed insights into their intersection by illuminating the environmental communication of far-right party and non-party actors in Europe and the United States. Although commonly perceived as a 'left-wing' issue today, concerns over the natural environment by the far right have a long, ideology-driven history. Thus, it is not surprising that some members of the far right offer distinctive ecological visions of communal life, though, for example, climate-change scepticism is at times voiced too. Investigating this range of stances within their discourse about the natural environment provides a window into the wider politics of the far right and points to a close connection between the politics of identity and the imagination of nature. Connecting the fields

of environmental communication and study of the far right, contributions to this edited volume therefore offer timely assessments of this often-overlooked dimension of far-right politics.

Murray Bookchin was not only one of the most significant and influential environmental philosophers of the twentieth century--he was also one of the most prescient. From industrial agriculture to nuclear radiation, Bookchin has been at the forefront of every major ecological issue since the very beginning, often proposing a solution before most people even recognized there was a problem. *Ecology or Catastrophe: The Life of Murray Bookchin* is the first biography of this groundbreaking environmental and political thinker. Author Janet Biehl worked as his collaborator and copyeditor for 19 years, editing his every word. Thanks to her extensive personal history with Bookchin as well as her access to his papers and archival research, *Ecology or Catastrophe* offers unique insight into his personal and professional life. Founder of the social ecology movement, Bookchin first started raising environmental issues in 1952. He foresaw global warming in the 1960s and even then argued that we should look into renewable energy sources as an alternative to fossil fuels. Wary of pesticides and other chemicals used in industrial agriculture, he was also an early advocate of small-scale organic farming, which has developed into the present locavore movement and the revival of organic markets. Even Occupy can trace the origins of its leaderless structure and general assemblies to the nonhierarchical organizational form Bookchin developed as a libertarian socialist. Bookchin believed that social and ecological issues were deeply intertwined. Convinced that capitalism pushes businesses to maximize profits and ignore humanist concerns, he argued that eco-crises could be resolved by a new social arrangement. His solution was Communalism, a new form of libertarian

socialism that he developed. An optimist and utopian, Bookchin believed in the potentiality for human beings to use reason to solve all social and ecological problems.

Third World Political Ecology Yale University Press

Using a synthesis of ecology, anthropology, philosophy and political theory, this book traces our society's conflicting legacies of freedom and domination, from the first emergence of human culture to today's global capitalism. The theme of Murray Bookchin's grand historical narrative is straightforward: environmental, economic and political devastation are born at the moment that human societies begin to organize themselves hierarchically. And, despite the nuance and detail of his arguments, the lesson to be learned is just as basic: our nightmare will continue until hierarchy is dissolved and human beings develop more sane, sustainable and egalitarian social structures.

NEW YORK TIMES BEST SELLER • From the world's leading forest ecologist who forever changed how people view trees and their connections to one another and to other living things in the forest—a moving, deeply personal journey of discovery Suzanne Simard is a pioneer on the frontier of plant communication and intelligence; her TED talks have been viewed by more than 10 million people worldwide. In this, her first book, now

available in paperback, Simard brings us into her world, the intimate world of the trees, in which she brilliantly illuminates the fascinating and vital truths—that trees are not simply the source of timber or pulp, but are a complicated, interdependent circle of life; that forests are social, cooperative creatures connected through underground networks by which trees communicate their vitality and vulnerabilities with communal lives not that different from our own. Simard writes—in inspiring, illuminating, and accessible ways—how trees, living side by side for hundreds of years, have evolved, how they learn and adapt their behaviors, recognize neighbors, compete and cooperate with one another with sophistication, characteristics ascribed to human intelligence, traits that are the essence of civil societies—and at the center of it all, the Mother Trees: the mysterious, powerful forces that connect and sustain the others that surround them. And Simard writes of her own life, born and raised into a logging world in the rainforests of British Columbia, of her days as a child spent cataloging the trees from the forest and how she came to love and respect them. And as she writes of her scientific quest, she writes of her own journey, making us understand how deeply human scientific inquiry exists beyond data and technology, that it is about understanding who we are and our place in the world.

**The Fourth Industrial Revolution** Rowman & Littlefield

What a rare mushroom can teach us about sustaining life on a fragile planet Matsutake is the most valuable mushroom in the world—and a weed that grows in human-disturbed forests across the northern hemisphere. Through its ability to nurture trees, matsutake helps forests to grow in daunting places. It is also an edible delicacy in Japan, where it sometimes commands astronomical prices. In all its contradictions, matsutake offers insights into areas far beyond just mushrooms and addresses a crucial question: what manages to live in the

---

ruins we have made? A tale of diversity within our damaged landscapes, *The Mushroom at the End of the World* follows one of the strangest commodity chains of our times to explore the unexpected corners of capitalism. Here, we witness the varied and peculiar worlds of matsutake commerce: the worlds of Japanese gourmets, capitalist traders, Hmong jungle fighters, industrial forests, Yi Chinese goat herders, Finnish nature guides, and more. These companions also lead us into fungal ecologies and forest histories to better understand the promise of cohabitation in a time of massive human destruction. By investigating one of the world's most sought-after fungi, *The Mushroom at the End of the World* presents an original examination into the relation between capitalist destruction and collaborative survival within multispecies landscapes, the prerequisite for continuing life on earth.

**Emergence and Anarchism** Black Rose Books Limited

A collection of essays by the late Murray Bookchin, the acclaimed writer and activist who spent most of his life working towards a better world. The basic premise of social ecology is to re-harmonise the balance between society and nature, to create a rational ecological society - aims that are increasingly vital and increasingly a part of the mainstream political discourse. This collection of essays give an overview and introduction to his ideas. *The Return of Nature* Black Rose Books Ltd. This collection provides an overview of the thought of the foremost social theorist and political philosopher of the libertarian left today. Best known for introducing ecology as a concept relevant to radical political thought in the early 1960s, Murray Bookchin was the first to propose, in the innovative and coherent body of ideas that he has called "social ecology", that a liberatory society would also have to be an ecological one. His writings span five decades and encompass subject matter of remarkable breadth. Bookchin's writings on revolutionary

philosophy, politics and history are far less known than the specific controversies that have surrounded him, but deserve far greater attention. Despite Bookchin's critical engagement with both Marxism and anarchism, his political philosophy, known as libertarian municipalism, draws on the best of both for the emancipatory tools to build a democratic, libertarian alternative. His nature philosophy is an organic outlook of generation, development, and evolution that grounds human beings in natural evolution yet, contrary to today's fashionable anti-humanism, places them firmly at its summit. Bookchin's anthropological writings trace the rise of hierarchy and domination out of egalitarian societies, while his historical writings cover important chapters in the European revolutionary tradition.

Consistent throughout Bookchin's work is a search for ways to replace today's capitalist society--which disenchant most of humanity for the benefit of the few and is poisoning the natural world--with a more rational and humane alternative. The selections in this reader constitute a sampling from the writings of one of the most pivotal thinkers of our era.
