Key topics in the ongoing evolution of environmental governance, with new and updated material. This survey of current issues and controversies in environmental policy and management is unique in its thematic mix, broad coverage of key debates, and in-depth analysis. The contributing authors, all distinguished scholars or practitioners, offer a comprehensive examination of key topics in the continuing evolution of environmental governance, with perspectives from public policy, public administration, political science, international relations, sustainability theory, environmental economics, risk analysis, and democratic theory. The second edition of this popular reader has been thoroughly revised, with updated coverage and new topics. The emphasis has shifted from sustainability to include sustainable cities, from domestic civic environmentalism to global civil society, and from global interdependence to the evolution of institutions of global environmental governance. A general focus on devolution of authority in the United States has been sharpened to address the specifics of contested federalism and fracking, and the treatment of flexibility now explores the specifics of regulatory innovation and change. New chapters join original topics such as environmental justice and collaboration and conflict resolution to address highly salient and timely topics: energy security; risk assessment, communication, and technology innovation; regulation-by-revelation; and retrospective regulatory analysis. The topics are organized and integrated by the book's "3R" framework: reconceptualizing governance to reflect ecological risks and interdependencies better, reconnecting with stakeholders, and reframing administrative rationality. Extensive cross-references pull the chapters together. A broad reference list enables readers to pursue topics further. Contributors Regina S. Axelrod, Robert F. Durant, Kirk Emerson, Daniel J. Fiorino, Anne J. Kantel, David M. Konisky, Michael E. Kraft, Jennifer Kuzma, Richard Morgenstern, Tina Nabatchi, Rosemary O'Leary, Barry Rabe, Walter A. Rosenbaum, Stacy D. VanDeveer, Paul Wapner

A New York Times Bestseller An NPR Best Book of the Year The epic successor to one of the most important books of the century: at once a retelling of global history, a scathing critique of

contemporary politics, and a bold proposal for a new and fairer economic system. Thomas Piketty's bestselling Capital in the Twenty-First Century galvanized global debate about inequality. In this audacious follow-up, Piketty challenges us to revolutionize how we think about politics, ideology, and history. He exposes the ideas that have sustained inequality for the past millennium, reveals why the shallow politics of right and left are failing us today, and outlines the structure of a fairer economic system. Our economy, Piketty observes, is not a natural fact. Markets, profits, and capital are all historical constructs that depend on choices. Piketty explores the material and ideological interactions of conflicting social groups that have given us slavery, serfdom, colonialism, communism, and hypercapitalism, shaping the lives of billions. He concludes that the great driver of human progress over the centuries has been the struggle for equality and education and not, as often argued, the assertion of property rights or the pursuit of stability. The new era of extreme inequality that has derailed that progress since the 1980s, he shows, is partly a reaction against communism, but it is also the fruit of ignorance, intellectual specialization, and our drift toward the dead-end politics of identity. Once we understand this, we can begin to envision a more balanced approach to economics and politics. Piketty argues for a new "participatory" socialism, a system founded on an ideology of equality, social property, education, and the sharing of knowledge and power. Capital and Ideology is destined to be one of the indispensable books of our time, a work that will not only help us understand the world, but that will change it.

The Economics of Aging presents results from an ongoing National Bureau of Economic Research project. Contributors consider the housing mobility and living arrangements of the elderly, their labor force participation and retirement, the economics of their health care, and their financial status. The goal of the research is to further our understanding both of the factors that determine the well-being of the elderly and of the consequences that follow from an increasingly older population with longer individual life spans. Each paper is accompanied by critical commentary.

reflection on "freedom" in a dramatic, beautifully written memoir  
of the end of Communism in the Balkans. For precocious 11-year-  
old Lea Ypi, Albania 's Soviet-style socialism held the promise of  
a preordained future, a guarantee of security among enthusiastic  
comrades. That is, until she found herself clinging to a stone  
statue of Joseph Stalin, newly beheaded by student protests.  
Communism had failed to deliver the promised utopia. One 's  
"biography" —class status and other associations long in the  
past—put strict boundaries around one 's individual future.  
When Lea 's parents spoke of relatives going to "university" or  
"graduating," they were speaking of grave secrets Lea struggled  
to unveil. And when the early '90s saw Albania and other  
Balkan countries exuberantly begin a transition to the "free  
market," Western ideals of freedom delivered chaos: a dystopia  
of pyramid schemes, organized crime, and sex trafficking. With  
her elegant, intellectual, French-speaking grandmother; her  
radical-chic father; and her staunchly anti-socialist, Thatcherite  
mother to guide her through these disorienting times, Lea had a  
political education of the most colorful sort—here recounted with  
outstanding literary talent. Now one of the world 's most  
dynamic young political thinkers and a prominent leftist voice in  
the United Kingdom, Lea offers a fresh and invigorating  
perspective on the relation between the personal and the political,  
between values and identity, posing urgent questions about the  
cost of freedom.

When first published in 1976, Godfrey Hodgson 's *America in Our Time* won immediate recognition as a major interpretive study of the postwar era. In *The Liberal Consensus Reconsidered*, leading scholars—including Hodgson himself—confront his long-standing theory that a "liberal consensus" shaped the United States after World War II. These essays offer new insights into the era and diverging opinions on one of the most influential interpretations of mid-twentieth-century U.S. history.

Don Lavoie argues that the radical Left's enthusiasm for planning has been a tragic mistake and that progressive social change requires the abandonment of this traditional view. Lavoie argues that planning—whether Marxism, economic democracy, or industrial policy—can only disrupt social and economic coordination. He challenges both radicals and their critics to begin reformulating our whole notion of progressive economic change without reliance on central planning. *National Economic Planning: What is Left?* will challenge thinkers and policymakers of every political persuasion. *The Economics of Health Reconsidered, Fifth Edition* John Wiley & Sons  
The American health care system is a unique mix of public and private programs that critics argue has produced a two-tier system - one for the rich and the other for the poor - that delivers dramatically unequal care and leaves millions of Americans seriously underinsured or with no coverage at all. This book examines the root causes of the inequalities of the American health care system and discusses various policy alternatives. It systematically documents the demands on and the performance of our health care system for different population groups as defined on the basis of gender (women), age (children), race and ethnicity (African Americans, Hispanics, Native Americans), and residence in high poverty areas (rural and inner city locales). For each population, the book documents: historical and

demographic profile, data on health status, aspects of inequality including access; quality of care; and endemic, cultural, and lifestyle issues affecting health; policies, laws, and programs relevant to health care; and, indicators of improvement or negative trends.

Why are house prices in many advanced economies rising faster than incomes? Why isn't land and location taught or seen as important in modern economics? What is the relationship between the financial system and land? In this accessible but provocative guide to the economics of land and housing, the authors reveal how many of the key challenges facing modern economies - including housing crises, financial instability and growing inequalities - are intimately tied to the land economy. Looking at the ways in which discussions of land have been routinely excluded from both housing policy and economic theory, the authors show that in order to tackle these increasingly pressing issues a major rethink by both politicians and economists is required.

A major new biography of the fourth U.S. president, from New York Times – bestselling author Lynne Cheney James Madison was a true genius of the early republic, the leader who did more than any other to create the nation we know today. This majestic new biography tells his story. Outwardly reserved, Madison was the intellectual driving force behind the Constitution. His visionary political philosophy—eloquently presented in the *Federalist Papers*—was a crucial factor behind the Constitution 's ratification, and his political savvy was of major importance in getting the new government underway. As secretary of state under Thomas Jefferson, he managed the Louisiana Purchase, doubling the size of the United States. As president, Madison led the country in its first war under the Constitution, the War of 1812. Without precedent to guide him, he would demonstrate that a republic could defend its honor and independence while remaining true to its young constitution.

The field of behavioural economics can tell us a great deal about cognitive bias and unconscious decision-making, challenging the orthodox economic model whereby consumers make rational and informed choices. But it is in the arena of health that it perhaps offers individuals and governments the most value. In this important new book, the most pernicious health issues we face today are examined

through a behavioral economic lens. It provides an essential and timely overview of how this growing field of study can reframe and offer solutions to some of the biggest health issues of our age. The book opens with an overview of the core theoretical concepts, after which each chapter assesses how behavioral economic research and practice can inform public policy across a range of health issues. Including chapters on tobacco, alcohol and drug use, physical activity, dietary intake, cancer screening and sexual health, the book integrates the key insights from the field to both developed and developing nations. Also asking important ethical questions around paternalism and informed choice, this book will be essential reading for students and researchers across psychology, economics and business and management, as well as public health professionals wishing for a concise overview of the role behavioral economics can potentially play in allowing people to live healthier lives.

Instructor Resources: PowerPoint slides, important chapter concepts, discussion questions with answers, additional readings, and a transition guide to the new edition. Now in its fourth edition, *The Economics of Health Reconsidered* presents an argument that still holds true: despite assertions to the contrary, neither economic theory nor evidence shows that reliance on market forces leads to superior outcomes in healthcare systems. This book guides you toward reconsidering the field of health economics as it is taught & practiced. The book discusses & analyzes the assumptions that must be met for a competitive market to be successful, concludes that these assumptions are not met in the health field, & provides a number of applications for health policy. "Tom Rice has done all of us in health a favor. In succinct, accessible-at times even delightful- prose, he has expressed so many of our concerns about what sometimes passes for 'conventional' health economics." - Gavin Mooney, Ph.D., Professor of Health Economics, University of Sydney, Australia. Shifting faculty roles in a changing landscape Ernest L. Boyer's landmark book *Scholarship Reconsidered: Priorities of the Professoriate* challenged the publish-or-perish status quo that dominated the academic landscape for generations. His powerful and enduring argument for a new approach to faculty roles and rewards continues to play a significant part of the national conversation on scholarship in the academy. Though steeped in tradition, the role of faculty in the academic world has shifted significantly in recent decades. The rise of the non-tenure-track class of professors is well documented. If the historic rule of promotion and tenure is waning, what role can scholarship play in a fragmented, unbundled academy? Boyer offers a still much-needed approach. He calls for a broadened view of scholarship, audaciously refocusing its gaze from the tenure file and to a wider community. This expanded edition offers, in addition to the original text, a critical introduction that explores the impact of Boyer's views, a call to action for applying Boyer's message to the changing nature of faculty work, and a discussion guide to help readers start a new conversation about how *Scholarship Reconsidered* applies today.

The Economics of Health Reconsidered Cambridge University Press

The family is a complex decision unit in which partners with potentially different objectives make consumption, work and fertility decisions. Couples marry and divorce partly based on their ability to coordinate these activities, which in turn depends on how well they are matched. This book provides a comprehensive, modern and self-contained account of the research in the growing area of family economics. The first half of the book develops several alternative models of family decision making. Particular attention is paid to the collective model and its testable implications. The second half discusses household formation and dissolution and who marries whom. Matching models with and without frictions are analyzed and the important role of within-family transfers is explained. The implications for marriage, divorce and fertility are discussed. The book is intended for graduate students in economics and for researchers in other fields interested in the economic approach to the family.
