Ape - Man Franklin Classics
This debut book boldly seeks to argue competitively in the same intellectual field as famous atheists such as RICHARD DAWKINS, CHRISTOPHER HITCHENS, and BERTRAND RUSSELL, and to do so in the spirit and style of such famous Christian apologists as C.S. Lewis and RAVI ZACHARIAS, drawing heavily on basic science, history, physics, psychology,

paleontology, anthropology, archeology, neurology, child development and even science fiction. It describes the evolution of the human brain in ancient hominids allowing humans to eventually conceive a non-physical realm (the spirit world), and as the mind evolved intellectually from primitive animism to Christology, God revealed himself gradually as the developing hominid brain became able to comprehend new ideas. For Believers, the author presents a new, intellectually satisfying way to understand and defend the Bible. For both Skeptics and Believers, a worldview is offered that is

spiritually meaningful and scientifically sound. *The Story of the Human Body* Wentworth Press
“An unforgettable journey through this twisted miracle of evolution we call ‘our body.’”
—Spike Carlsen, author of *A Walk Around the Block From blurry vision to crooked teeth, ACLs that tear at alarming rates and spines that seem to spend a lifetime falling apart, it’s a curious thing that human beings have beaten the odds as a species. After all, we’re the only survivors on our branch of the tree of life. The flaws in our makeup raise more than a few questions, and this detailed foray into the many twists and turns of our ancestral past includes no shortage of curiosity and humor to find the answers. Why is it that human mothers have such a life-endangering experience giving birth? Why are there entire medical specialties for teeth and feet? And why is it that human babies can’t even hold*

their heads up, but horses are trotting around minutes after they're born? In this funny, wide-ranging and often surprising book, biologist Alex Bezzarides tells us just where we inherited our adaptable, achy, brilliant bodies in the process of evolution.

Dawn of Man Corgi Books

It was only supposed to be a short visit. It turned into a love affair. Melanie White is in trouble. Young, unmarried, with no resources to speak of, she's forced to flee home and hide out with her aunt on a ranch in a western mining town. She's just passing through on her way farther West, and it's a good thing, too: she can't stand the ranch owner. He's rowdy, immature...and undeniably attractive. David Tanner has his life just the way he likes it: he does what he wants, when he wants, and nobody can tell him any different--least of all, his former nanny's niece

Melanie, who likes books more than people. But when a family emergency forces Melanie and David to work together, she discovers that there's more to him than meets the eye. And he finds out that life as a bachelor may not be what he likes after all. Contains mild language and sensual content within marriage.

The Origins of Man WestBow Press

Traces the origins and evolution of human beings, from the earliest prehistoric fossil record to the latest evidence based on genetic research.

Book 2 of the Real World Series On My Way Up LLC In interviews with today's major figures in evolutionary biology--including Stephen Jay Gould, E. O. Wilson, Ernst Mayr, and John Maynard Smith--Ruse offers an unparalleled account of evolutionary theory, from popular books to museums to the most complex theorizing, at a time when its status as science is under greater scrutiny than ever before. A Good Man's Life Createspace Independent Publishing Platform "'Garniss, lend me your knife for a second, will you,' I whispered." So begins Java Man, the inside story of how one discovery—a human skull found on the island of Java—by two geologists shook the foundations of science. By uncovering new evidence about the hominid known as Java man, Carl C. Swisher and Garniss H. Curtis were able to date his fossil remains at 1.7 million years, an age that stunned the scientific community because it pushed back the time when humans migrating out of Africa first reached Eurasia by nearly one million years. Cowritten by the popular science writer Roger Lewin, this is a gripping and informative account of the discovery that breathed new life into the human origins debate. “ Rutherford describes [The Book of Humans] as being about the paradox of how our evolutionary journey turned ‘ an otherwise average ape ’ into one capable of creating complex tools, art, music, science, and engineering. It ’ s an intriguing question, one his book sets against descriptions of the infinitely amusing strategies and antics of a dizzying array of animals. ” —The New York Times Book Review Publisher's Note: The Book of Humans was previously published in hardcover as *Humanimal*. In this new evolutionary history, geneticist Adam Rutherford explores the profound paradox of the human animal. Looking

for answers across the animal kingdom, he finds that many things once considered exclusively human are not: We aren ’ t the only species that “ speaks, ” makes tools, or has sex outside of procreation. Seeing as our genome is 98 percent identical to a chimpanzee ’ s, our DNA doesn ’ t set us far apart, either. How, then, did we develop the most complex culture ever observed? The Book of Humans proves that we are animals indeed—and reveals how we truly are extraordinary. Self-Made Man CreateSpace “ An essential read for anyone interested in the stories of the animals in our home or on our plate. ” —BBC Focus Without our domesticated plants and animals, human civilization as we know it would not exist. We would still be living at subsistence level as hunter-gatherers if not for domestication. It is no accident that the cradle of civilization—the Middle East—is where sheep, goats, pigs, cattle, and cats commenced their fatefully intimate association with humans. Before the agricultural revolution, there were perhaps 10 million humans on earth. Now there are more than 7 billion of us. Our domesticated species have also thrived, in stark contrast to their wild ancestors. In a human-constructed environment—or man-made world—it pays to be

domesticated. Domestication is an evolutionary process first and foremost. What most distinguishes domesticated animals from their wild ancestors are genetic alterations resulting in tameness, the capacity to tolerate close human proximity. But selection for tameness often results in a host of seemingly unrelated by-products, including floppy ears, skeletal alterations, reduced aggression, increased sociality, and reduced brain size. It's a package deal known as the domestication syndrome. Elements of the domestication syndrome can be found in every domesticated species—not only cats, dogs, pigs, sheep, cattle, and horses but also more recent human creations, such as domesticated camels, reindeer, and laboratory rats. That domestication results in this suite of changes in such a wide variety of mammals is a fascinating evolutionary story, one that sheds much light on the evolutionary process in general. We humans, too, show signs of the domestication syndrome, which some believe was key to our evolutionary success. By this view, human evolution parallels the evolution of dogs from wolves, in particular. A natural storyteller, Richard C. Francis weaves history, archaeology, and anthropology to create a fascinating narrative while seamlessly integrating the most cutting-edge ideas in twenty-first-century biology, from genomics to evo-devo.
