Evolutionary psychology - sciencedaily.com

Evolutionary psychology is a theoretical approach in the social and natural sciences that examines psychological structure from a modern evolutionary perspective. It seeks to identify which human psychological traits are evolved adaptations – that is, the functional products of natural selection or sexual selection in human evolution. Adaptationist thinking about physiological mechanisms, such as the heart, lungs, and immune system, is common in evolutionary biology. Some evolutionary ...

Evolutionary psychology | Britannica

So, too, did our brains. Evolutionary psychology postulates that the mind is shaped by pressure to survive and reproduce. We jealously guard romantic partners and cherish our closest relatives above all others, lest we fail to pass on our genes. We easily acquire language, which is critical for cooperation and hence survival.

Psychology's intellectual parents are the disciplines of Philosophy and physiology The person responsible for establishing psychology as an independent discipline with its own subject matter is Wilhelm Wundt The notion that the subject matter of psychology should be the scientific study of the conscious experience is MOST closely linked with Wilhelm Wundt According to Wilhelm [...]
